**DECLARATION OF ERIC B. FISHER IN SUPPORT OF PLAINTIFF'S
MOTION FOR LEAVE TO APPEAL PURSUANT TO 28 U.S.C. § 158(a)
AND FEDERAL RULE OF BANKRUPTCY PROCEDURE 8004**

I, Eric B. Fisher, declare as follows:

1. I am a Partner with Binder & Schwartz LLP, counsel for plaintiff Motors Liquidation Company Avoidance Action Trust, by and through the Wilmington Trust Company, solely in its capacity as Trust Administrator and Trustee. I make this declaration in support of Plaintiff's Motion for Leave to Appeal Pursuant to 28 U.S.C. § 158(a) and Federal Rule of Bankruptcy Procedure 8004.

2. Attached hereto as Exhibit A is a true and correct copy of the Bankruptcy Court's *Memorandum Opinion Regarding Fixture Classification and Valuation*, dated September 26, 2017 (the "Opinion") in the above-captioned adversary proceeding, Bankr. Adv. Pro. Dkt. No. 1015.¹

3. Attached hereto as Exhibit B is a true and correct copy of the *Amended Pretrial Order* jointly submitted by the parties in the above-captioned adversary proceeding on April 23, 2017.²

4. Attached hereto as Exhibit C is a true and correct copy of the *Final Order Pursuant to Bankruptcy Code Sections 105(a), 361, 362, 363, 364 and 507 and Bankruptcy Rules 2002, 4001 and 6004 (A) Approving a DIP Credit Facility and Authorizing the Debtors to Obtain Post-Petition Financing Pursuant Thereto, (B) Granting Related Liens and Super-Priority Status, (C) Authorizing the Use of Cash Collateral and (D) Granting Adequate Protection to Certain Pre-Petition Secured Parties*, entered June 25, 2009, in the above-captioned bankruptcy proceeding, Bankr. Dkt. No. 2529.

¹ Table A to the Opinion has been replaced with a revised Table A, pursuant to the Bankruptcy Court's October 4, 2017 *Order Modifying "Table A" to Memorandum Opinion*, Bankr. Adv. Pro. Dkt. No. 1018.

² The Amended Pretrial Order has not been entered by the Bankruptcy Court on the docket.

5. Attached hereto as Exhibit D is a true and correct copy of the *Stipulation and Order Setting Valuation Date*, Bankr. Adv. Pro. Dkt. No. 641.

6. Attached hereto as Exhibit E is a true and correct copy of an excerpt of the April 18, 2016 transcript of proceedings before the Bankruptcy Court in the above-captioned adversary proceeding.

7. Attached hereto as Exhibit F is a true and correct copy of Joint Trial Exhibit JX-0005, the Declaration of Harry Wilson (without exhibits), dated June 25, 2009, admitted into evidence at the Representative Assets Trial.

8. Attached hereto as Exhibit G is a true and correct copy of an excerpt from the Transcript of the November 3, 2016 Deposition of Matthew Feldman, admitted into evidence at the Representative Assets Trial.

I declare under penalty of perjury under the laws of the United States that the foregoing is true and correct.

Table A: Specific Conclusions of Value for Each Asset

**MARTIN GLENN
UNITED STATES BANKRUPTCY JUDGE**

I. INTRODUCTION¹

The Defendants are a group of Old GM's creditors referred to as the Term Lenders, who initially held a security interest in approximately \$1.5 billion of Old GM's assets, with a perfected security interest resulting from a UCC-1 Statement filed in Delaware. In earlier stages of this litigation (described below), the perfected security interest of the Term Lenders resulting from the Delaware UCC-1 filing was terminated when a UCC-3 Termination Statement was mistakenly filed in Delaware. Despite the filing of the UCC-3 Termination Statement in Delaware, the Defendants allege that, at the time of the 363 Sale they held a perfected security interest in over 200,000 fixtures at GM plants because of twenty-six Fixture Filings in counties where disputed assets were located. The Defendants argue that these fixtures should be valued according to their replacement cost new less depreciation, as part of a going-concern business. The Avoidance Action Trust, on behalf of Old GM's unsecured creditors, disputes whether most of these assets are indeed fixtures, and if they were, it argues that they should be valued at their liquidation value.

It is impractical, to say the least, to litigate issues with respect to each of the over 200,000 disputed assets. Therefore, in pretrial proceedings, the Court directed the parties to designate forty representative assets to be the subject of this trial. The Court indicated that it would issue an opinion regarding which assets are fixtures and how to value them. The parties agreed that after the issuance of this Opinion, they would attempt to settle as to the remaining disputed assets. In an effort to provide guidance to the parties in resolving the remaining disputes, the

¹ Capitalized terms in the Introduction are defined below.

Court includes extensive factual detail in this Opinion. Where possible, the Court has articulated broad principles of both fixture and valuation law to serve as guiding principles for the more than 200,000 assets that remain in dispute.

A. Fixtures

The representative forty assets were located at General Motors facilities in Michigan and Ohio. Disputed assets were located in other states as well, but the disagreement between the Plaintiff and Defendants touches on the fundamental nature of manufacturing assets located at GM's plants: which ones were "fixtures" that remained subject to the Term Lenders' perfected security interests when the chapter 11 cases were filed; and, for those fixtures, what are the appropriate valuation principles?

The Defendants maintain that hundreds of thousands of General Motors assets were fixtures that remained part of the Lenders' perfected security interest after the UCC-3 Termination Statement was filed in Delaware. The Plaintiff disagrees, and argues that just about every asset located inside General Motors facilities was not a fixture. The forty "representative" assets are characteristic of thousands of other GM assets. Hopefully, with the benefit of this Opinion, the parties will be able to resolve the balance of their dispute through settlement.²

The Representative Assets selected by the parties range from enormous stamping presses and machining equipment, to high-tech robotic arms, to long and winding conveyor systems, and even include a software program. The assets, many of which the Court observed in operation during a site-visit with the parties, perform a wide assortment of tasks. Presses stamp sheet metal into auto body parts; robots conduct precision welding generating a cascade of sparks

² With over 200,000 assets remaining in dispute, in the event the Court is required to make individual determinations on each of these 200,000 assets, cars very well might be flying around Mars by the time the dispute is fully adjudicated.

along an intricate assembly line; and sophisticated paint sprayers coat auto parts in a state-of-the-art paint shop described at trial as truly “beautiful.”

Throughout this case, several principles have emerged from both the case law and the nature of the assets involved that have assisted the Court in making its ultimate determinations. First, the presence of a concrete pit, specialized foundation, or trench attendant to an asset weighed heavily in favor of finding that an asset was a fixture. As borne out by the case law, the permanence of concrete evidences both a strong level of attachment, and also a forceful intent that an asset remain in place permanently. Second, given the highly interconnected nature of the assets in the manufacturing and assembly process at these facilities, the Court found it useful to look at the level of integration and interconnectedness that an asset had with the production and assembly process and surrounding assets. An asset highly integrated into the assembly line or manufacturing process, including with respect to other assets adjacent or attached to it, cannot be easily removed or relocated without bringing the manufacturing and assembly to a halt, and are stronger indications that the asset was intended to remain in place permanently as an accession to the realty. This is particularly true where a group of assets fit together in a specific amalgamation, and one or more of the assets is installed in concrete. On the other hand, an asset standing on its own, separate from the manufacturing and assembly process and other assets, necessarily has a lower level of integration with the assembly line and manufacturing process, and there is a lesser indication of an intent for permanence. These principles, explained more fully below, will hopefully assist the parties as they endeavor to resolve the disputes surrounding the remaining assets in question.

B. Valuation

The crux of the valuation task the Court faces is this: how can the Court isolate the value of individual assets from the historic government intervention in the 363 Sale? The Plaintiff

argues that the Court should pretend the 363 Sale never happened: without the so-called Public Policy Subsidy and government intervention, Old GM would have liquidated, New GM would not be manufacturing automobiles today, and all of Old GM's assets would be valued at their liquidation value—most for scrap. But that is not the world we live in. Defendants urge the Court to value the Representative Assets according to an intermediate step in a contemporaneous valuation by KPMG³: “RCNLD,” which values assets at their replacement cost new less certain depreciation and utilization-based economic obsolescence, but which *omits* a downward adjustment for economic obsolescence according to the earning power of the business at the time and under the circumstances of the 363 Sale in June 2009 during the Great Recession. Essentially, Defendants ask the Court to value the Representative Assets as if they were part of a business with guaranteed earnings to support the assets' value. That is not the world we live in, either.

Instead, the Court now exercises its discretion to craft the best available valuation from the evidence presented at trial. The Court largely rejects the two options presented by the parties and instead finds that the KPMG values, *including* the earnings-based downward adjustment, are the best valuation methodology for the Old GM assets sold to New GM that were expected to remain in continued use. It would not be appropriate to include the value of the Public Policy Subsidy in the individual valuation of the Representative Assets. But teasing out the value of the Public Policy Subsidy does not require resorting to a counterfactual hypothetical world in which the 363 Sale never occurred. The Court finds that, for the Representative Assets that were sold to New GM, a “going concern in continued use” premise of value is appropriate. Those assets

³ New GM was required for financial reporting purposes to value acquired assets using “fresh start accounting” principles. While Deloitte was New GM's public accounting and auditing firm, KPMG was retained to value the acquired assets.

In keeping with the principle that assets should be valued according to their proposed disposition on the Valuation Date and not a hypothetical outcome, the two Representative Assets

The Bank of New York, and National City Bank (collectively, the “Bank Lenders”) committed upfront to fund the Term Loan. (Term Loan Agreement ¶ 2.01, Ex. 1.) The Bank Lenders then had the right to sell, typically through assignments, interests in the Term Loan and the accompanying note in the secondary market to a variety of investors. (*Id.* ¶ 10.06.) The Bank Lenders ultimately assigned some or all of their interests in the Term Loan, and over 500 sophisticated entities became lenders under the Term Loan Agreement (the “Term Lenders”). (“Amended Complaint,” ECF Doc. # 91 ¶¶ 15–568.)

Prior to entering into the Term Loan Agreement, GM entered into a synthetic lease (the “Synthetic Lease”) on October 31, 2001, by which GM obtained up to approximately \$300 million in financing from a syndicate of financial institutions. *In re Motors Liquidation Co.*, 777 F.3d 100, 101 (2d Cir. 2015). The Synthetic Lease was documented by a Participation Agreement dated as of October 31, 2001, with JPMC acting as administrative agent. *In re Motors Liquidation Co.*, 486 B.R. 596, 606 n.13 (Bankr. S.D.N.Y. 2013), *rev’d*, 777 F.3d 100 (2d Cir. 2015) [hereinafter *Bankruptcy UCC Opinion*]. GM’s obligation to repay the financing under the Synthetic Lease was secured by liens on certain real properties. *Id.* at 606.

Outstanding amounts under the Synthetic Lease were paid off and the Synthetic Lease was terminated on October 30, 2008, and the liens on real estate and related assets were released. *Id.* at 608–14. On October 30, 2008, GM’s counsel, with respect to the Synthetic Lease, caused the filing of UCC-3 termination statements with the Delaware Secretary of State. *Id.* As part of that filing, JPMC and its counsel erroneously authorized the filing of a UCC-3 termination statement (the “Termination Statement”) terminating the UCC-1 Statement securing the Term Loan. *Id.* Specifically, the Termination Statement provided that the “[e]ffectiveness of the

[UCC-1] Statement . . . is terminated with respect to security interest(s) of the Secured Party authorizing [the] Termination Statement.”⁵ (Am. Compl. ¶ 582, Ex. 2.)

2. *Financial Difficulty at GM and the Automotive Industry Generally*

In 2008, as a result of a decline in market demand for full-size trucks and SUVs, competition from foreign automakers, rising oil prices and overall economic conditions, as well as rising structural costs relating to labor, GM was facing financial difficulties including impaired liquidity. (See JPTO ¶¶ 1–9; Trial Tr. (Worth) at 1801:24–1802:14; Keller Direct ¶¶ 22–25.) With the growth of competitors, between 1980 and early 2009, Old GM’s market share for new North American vehicle sales dropped from approximately 45% to approximately 19.5%.

The pressure mounted in the fall of 2008 with a contraction of the credit markets, lowering of consumer confidence, high unemployment, and a further drop in consumer discretionary spending. These factors contributed to a downturn in auto sales.

Old GM was also burdened with significant structural costs, union restrictions, pension and healthcare obligations, an inefficient dealership network, and several failed brands. These pressures and burdens resulted in Old GM facing a capital shortfall. (JPTO ¶¶ 8–9.)

The price of Old GM’s common stock declined from \$23.19 to \$0.75 per share from May 1, 2008 to May 29, 2009 (the last trading day before the June 1, 2009 filing of Old GM’s Chapter 11 petition). In its Form 10-Q filed on May 8, 2009, Old GM reported consolidated global assets of approximately \$82 billion and liabilities of approximately \$172 billion, as of March 31, 2009.

⁵ The Termination Statement did not release the liens securing the Term Loan arising from twenty-six “fixture filings” that were intended to perfect security interests in “fixtures” located in GM’s plants in different states, including Michigan, Ohio and Louisiana.

billion more between December and February 2009, and the remaining \$4 billion on February 17, 2009. (*Id.* ¶ 22.)

On March 30, 2009, the President of the United States announced that the United States Government would extend to Old GM adequate working capital for a period of another sixty days to enable it to continue operations, and that it would work with Old GM to develop and implement an appropriate viability plan. (*Id.* ¶ 23.)

On April 22, 2009, the United States Government and Old GM entered into amended credit agreements for the Treasury Prepetition Loan. On April 24 2009, Old GM received a second TARP loan of \$2 billion. On May 20, 2009, Old GM received a third TARP loan of \$4 billion. Old GM had borrowed a total of \$19.4 billion from the U.S. Government by the end of May 2009.

As a condition to the TARP loans, Old GM was required to submit viability plans. Old GM ultimately submitted five versions of its viability plan to the United States Government. The first four were rejected. The United States Government accepted the fifth viability plan, Viability Plan 4B (“VP-4B”), which contemplated additional government funding in connection with a bankruptcy filing. (*Id.* ¶¶ 28–30.)

C. GM’s Bankruptcy, the DIP Financing Order, and the 363 Sale

On June 1, 2009 (the “Petition Date”), GM and certain of its subsidiaries filed voluntary petitions for relief under chapter 11 of title 11 of the Bankruptcy Code in this Court. As of the Petition Date, the outstanding principal balance under the Term Loan Agreement was in excess of \$1.4 billion. (Am. Compl. ¶ 573.)

On June 3, 2009, the Office of the United States Trustee appointed the Official Committee of Unsecured Creditors of Motors Liquidation f/k/a General Motors Corporation (the “Committee”) pursuant to section 1102 of the Bankruptcy Code.

On the Petition Date, the Debtors also filed the motion for debtor-in-possession financing (the “DIP Motion”) seeking authority to obtain interim postpetition financing on a secured and superpriority basis up to a maximum aggregate interim amount of \$15 billion and final postpetition financing on a secured and superpriority basis up to a maximum aggregate final amount of \$33.3 billion under a DIP facility (the “DIP Facility”) from the United States Department of Treasury and Export Development Canada. The DIP Facility was to be used to pay, among other things, certain prepetition claims and fund the Debtors’ operations and administration costs. (*See* Am. Compl. ¶ 574.) The Court approved the DIP Facility, first on an interim and then on a final basis. (Interim DIP Order (Main Proceeding ECF Doc. # 292); DIP Order (Main Proceeding ECF Doc. # 2529).) Among other things, the DIP Order authorized repayment in full of the Term Loan. (Am. Compl. ¶ 578.)

Paragraph 19(d) of the DIP Order provides for full general releases of any and all claims against, among others, the holders of the Term Loan, *except*:

that such release shall not apply to the Committee with respect only to the perfection of first priority liens of the Prepetition Senior Facilities Secured Parties (it being agreed that if the Prepetition Senior Facilities Secured Parties, after Payment, assert or seek to enforce any right or interest in respect of any junior liens, the Committee shall have the right to contest such right or interest in such junior lien on any grounds, including (without limitation) validity, enforceability, priority, perfection or value) (the ‘Reserved Claims’).

(DIP Order ¶ 19(d).)

Following entry of the DIP Order, the Debtors paid \$1,481,656,507.70 to the Term Lenders in full satisfaction of all claims arising under the Term Loan Agreement. (Am. Compl. ¶ 578.)

judgment, the Bankruptcy Court held that the termination of the UCC-1 Statement was ineffective unless it was authorized, and neither party intended to terminate it. *Bankruptcy UCC Opinion.*, 486 B.R. at 606.

The case was appealed directly to the Second Circuit which, after a decision by the Delaware Supreme Court on a certified question, held that the UCC-1 Statement was not effective as of the Petition Date due to the filing of the Termination Statement in October 2008. *See Motors Liquidation Co.*, 777 F.3d at 105 (“[A]lthough JPMorgan never intended to terminate the Main Term Loan UCC-1, it authorized the filing of a UCC-3 termination statement that had that effect Nothing more is needed.”). While the UCC-1 Statement no longer served to perfect the security interest in personal property at GM facilities, the Fixture Filings had been made in the offices of the County Clerks for the counties where the Material Facilities were located. The security interest in fixtures covered by the twenty-six Fixture Filings were unaffected by the UCC-3 Termination Statement filed in Delaware.

2. *The Amended Complaint*

After the appeal to the Second Circuit was resolved, the Avoidance Action Trust, as successor to the Committee, became the Plaintiff in this case. (JPTO at 1.) The Plaintiff amended the Original Complaint on May 20, 2015 (the “Amended Complaint,” ECF Doc. # 91).⁶ The Amended Complaint included a new paragraph, which stated:

To the extent that some portion of the Collateral was secured and perfected by filings other than the [UCC-1] Statement (the “Surviving Collateral”), the value of the Surviving Collateral was less than the amount of the Term Loan Lenders’ claim under the Term Loan Agreement, and Defendants were not entitled to receive the Postpetition Transfers to the extent that the amount of such transfers exceeded the value of the Surviving Collateral. The Surviving Collateral is of inconsequential value.

⁶ After the filing of the Amended Complaint, many Term Lenders filed cross claims against JPMC. This Opinion does not address those cross claims.

(Am. Compl. ¶ 601.) Like the Original Complaint, the Amended Complaint only asserts a section 544 claim regarding the termination of the UCC-1 Statement, as the term “financing statement” in paragraph 601 refers to the “Delaware UCC-1.” The “Surviving Collateral” referenced in paragraph 601 refers to collateral secured by the twenty-six fixture filings. As will be discussed further below, paragraph 601 is not an attack on the priority of allegedly unperfected security interests; it is an assertion that the assets actually covered by fixture filings are of “inconsequential value.” Indeed, this assertion about the *value* of the fixtures is the underlying premise of the Plaintiff’s case—that nearly everything at the GM plants are not fixtures, and those assets that are fixtures are of no real value.

On May 19, 2016, the Plaintiff filed a letter (the “May 2016 Letter,” ECF Doc. # 613) raising for the first time an issue regarding the perfection and priority of liens on fixtures located at GM’s Lansing Delta Township (“LDT”) facility. In the May 2016 Letter, the Plaintiff explained that the LDT fixture filing identified a vacant parcel of land near the LDT plant. The Plaintiff noted that it planned to argue that “there is no surviving collateral at the Lansing plant” because of this error in the LDT fixture filing. (May 2016 Letter at 1.) The Amended Complaint was not amended after the May 2016 Letter was filed or at any time before or during trial.

E. The Court’s Site Visit to LDT and Warren Transmission

The Defendants and the Motors Liquidation Company Avoidance Action Trust (the “Plaintiff”) requested that the Court travel to Michigan to view many of the Representative Assets located at the Warren Transmission facility and the LDT facilities. (*See* ECF Doc. # 896.) On March 23, 2017, the Court entered the *Protocol Order for GM Site Visits* (the “Protocol Order,” ECF Doc. # 897). The Protocol Order set forth the agreed-upon procedures (the “Protocol”) for the Court to accompany the parties on a guided visit to view certain of the

Representative Assets located at the GM Warren Transmission facility and the facilities at Lansing Delta Township.

The Court visited Warren Transmission facility on April 4, 2017, and the LDT manufacturing facilities on April 5, 2017.⁷ Pursuant to the Protocol, the parties prepared brief scripted statements that were read aloud when the Court was viewing each Representative Asset. The Court found the site visit to be a useful supplement to the testimony and photographic evidence provided at trial.

F. GM's eFAST Ledger

The database that GM uses for its fixed asset accounting is called eFAST. (Trial Tr. (Goesling) at 2928:3–25; *see also* Fulcher Dep. Tr. at 37:12–18.) The eFAST database contains extensive information about GM's assets, including approximately 425 different fields within eFAST that contain asset-specific information regarding financial accounting, federal tax accounting and property tax reporting. (Trial Tr. (Goesling) at 2928:3–25; *see also* PX-290 (describing categories of information contained in the eFAST database).)

For this litigation, New GM produced data extracted from eFAST regarding the forty Representative Assets. (PX-231 (eFAST extract).) The eFAST extract, PX-231, includes information relating to each fixed asset, such as: the Asset ID number; a description of the asset; the in-service date, which is the date the asset was capitalized and put into production (Fulcher Dep. Tr. at 41:25–42:2); the installed cost; Lease Contract (*i.e.*, whether the asset is subject to a lease); the manufacturer and model number; the Book Depreciable Life in years and months (*i.e.*,

⁷ Transcripts were made during each of the site visits. The transcripts of the site visits are published on the docket. (ECF Doc. ## 987-1, 987-2.)

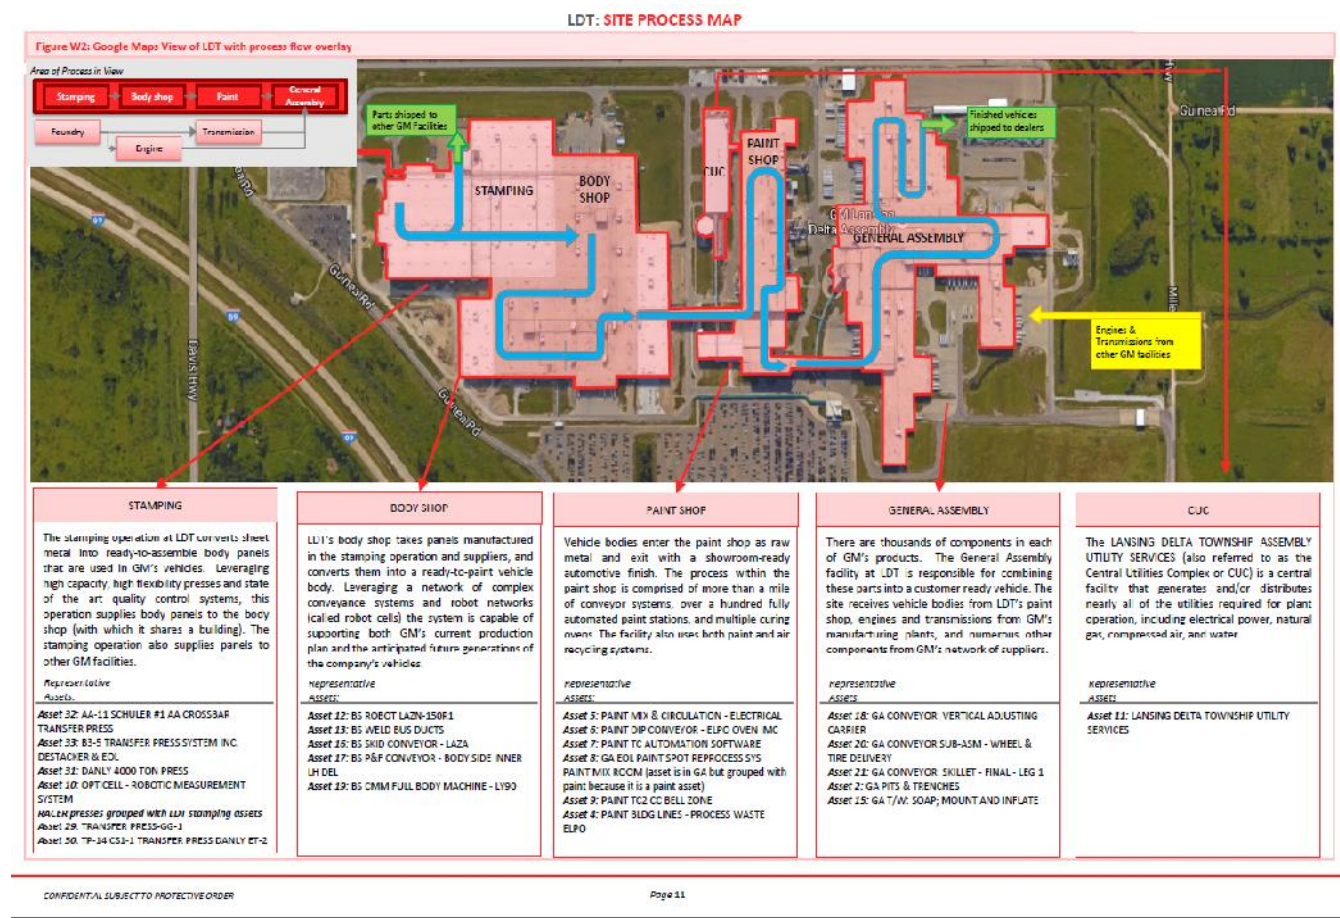

A. GM Lansing Delta Township

1. The LDT Plant

Since it was completed in 2006, Lansing Assembly has always been physically and functionally integrated with the stamping operations (“Lansing Stamping”). (Miller Direct ¶ 166.) As a practical matter, Lansing Stamping and Lansing Assembly function as a single, integrated operation to produce a common line of crossover vehicles: the Chevrolet Traverse, GMC Acadia (production recently moved to another plant), and the Buick Enclave. (*Id.*) GM has managed Lansing Stamping and Lansing Assembly as a unified facility known as “LDT.” (*Id.*) The two facilities are operationally integrated under the oversight of a single plant

accommodate a new aluminum vehicle that was going into production. (*Id.* at 1119:17–1120:19.)

The paint shop is equally integrated into the operations at the LDT facilities. The following exhibit demonstrates the highly integrated production flow at LDT:

(Stevens Direct, Ex. A at 11.)

2. *The Eaton County Fixture Filing*

A Fixture Filing listing Old GM as the debtor was recorded on behalf of JPMorgan on April 26, 2007, in Eaton County, Michigan (the “Eaton County Fixture Filing”). It describes the collateral covered by it as “all fixtures located on the real estate described in Exhibit A.” Exhibit A, as it is filed in the Eaton County Register of Deeds office, includes the following:

LIBER 2113 PAGE 662

EXHIBIT A

8400 MILLETT HWY, LANSING TOWNSHIP, LANSING MI 48917-9549

S 1/2 SEC 28 LYING W OF W LINE HWY I-96/69, EXC NW 1/4 OF SW 1/4, AND EXC
PARTS S & E OF LINE COM 100 FT W OF S 1/4 COR SAID SEC, TH N 50 FT, E 400 FT,
N 25 FT, E 188.65 FT TO W LINE SAID HWY R/W & POE, EXC LANDS USED FOR
GUNIEA RD & MILLETT HWY; 144 ACRES +/-; SEC 28 T4N R3W

**GM Assembly Lansing Delta
8400 Millett Hwy
Lansing, Easton County, MI
LandAmerica File No. 100729**

The metes and bounds description in Exhibit A *describes a vacant parcel of land across the street to the North of the Lansing Facilities*. The parcel described in the metes and bounds description in Exhibit A is denoted in a red outline on ECF Doc. # 827, Ex. 1, a sketch plan of the metes and bounds description jointly commissioned by the parties. The street addresses for the Lansing Facilities include 8175 Millett Highway, Lansing, MI and 8001 Davis Highway. (JPTO ¶ 65.)

Plaintiffs' theory of this portion of the case is fairly simple: the Eaton County Fixture Filing was effective to perfect the Lenders' security interest in any fixtures on the vacant land—in other words, no fixtures; it was ineffective to perfect the Lenders' security interest on fixtures located in the Lansing Facilities where many fixtures are, in fact, located. As explained below, if Plaintiff had timely challenged the perfection and priority of the Lenders' security interest of the fixtures in the Lansing Facilities, the Plaintiff's argument may have succeeded. But Plaintiff did

(Deeds Direct ¶ 42.) The 6-speed equipment that GM selected, and the layout of the equipment, was thereafter specifically adapted to the Warren Transmission facility. (*Id.* ¶ 45.) Only then were the renovations to the plant carried out in order to adapt the building to accommodate the new 6-speed line. (*Id.* ¶¶ 42–43.)

The 6-speed line that resulted from this elaborate planning and renovation process is a complex assemblage of assets that takes steel and aluminum castings and produces completed transmissions that can be shipped to GM assembly plants, such as LDT, for inclusion in GM vehicles. (Deeds Direct, Ex. A at 11.) The line consists of four highly integrated but distinct areas: the transfer gear machining area, the planetary gear machining area, the transmission housing machining area and the transmission assembly area. (DX-103.) The two gear machining areas machine steel gear blanks to fine tolerances, producing twenty-three ready-to-install gears for each 6-speed transmission. (Deeds Direct, Ex. A at 11–12 (process overview); Trial Tr. (Deeds) at 480:11–481:3; DX-109 (schematic of planetary gear machining area, including Asset 36); DX-112 (schematic of transfer gear machining area, including Assets 22, 24 and 25).) The transmission housing machining area machines cast aluminum housings into the four finished transmission housings that each 6-speed transmission requires and then tests them. (Deeds Direct, Ex. A at 11–12 (process overview); Trial Tr. (Deeds) at 480:11–481:3; DX-104 (schematic of transmission housing machining area, including Assets 3, 14 and 23).) The assets in the transmission assembly area then combine the housings, gears and other components and extensively test each transmission; completed transmissions are then packed and shipped to assembly plants. (Deeds Direct, Ex. A at 11; Trial Tr. (Deeds) at 480:11–481:9; DX-110 (schematic of transmission assembly area, including assets 1 and 35).)

Warren Transmission also produces an electric-drive unit used in the Chevy Volt and Chevy Malibu Hybrid. (Deeds Direct, Ex. A at 10.) The electric-drive production area was formerly occupied by the 4-speed line, and the facility was renovated specifically to accommodate the electric-drive unit. (*Id.*; Trial Tr. (Deeds) at 464:19–465:9.) Consistent with its practice of renovating facilities around the specific process and equipment to be installed, GM has renovated only those areas of the former 4-speed transmission area that the electric-drive unit occupies—in all, about one-third of the space the 4-speed formerly used. (Trial Tr. (Deeds) at 464:19–465:9 (discussing DX-101).)

C. The Lean Agile Flex System

In powertrain, as in other areas of GM’s manufacturing, fuel economy regulations and customer preferences started to shorten product cycles in the early 1990s. (Trial Tr. (Buttermore) at 1287:22–1288:11; Buttermore Direct ¶ 31.) In an attempt to adapt to a changing business environment, starting in 1994, GM began developing a “Lean Agile Flex” strategy for powertrain. (Trial Tr. (Buttermore) at 1291:11–13.) The strategy utilized computer numerically controlled technology in machines that cut or otherwise process metal castings (known as CNC machines). CNC machines perform one or more types of cutting and processing operations on a raw or semi-finished part to turn it into a finished component.⁸ CNCs are flexible as their programming can be updated as new machining operations are required, without any mechanical alterations to or movement of the CNC machine itself. (Deeds Direct, Ex. A at 106, 16, 44, 50; Buttermore Direct ¶ 34; Trial Tr. (Buttermore) at 1288:13–1289:3.) By June 2009, GM was well

⁸ The Liebherr Hobb (Asset 25) and Base Shaping Machine (Asset 24) are examples of CNC machines. They can each be programmed to machine any part that fits within their work envelope (the space within the machine where the transmission castings are placed to perform the shaping operations) in a variety of ways as specified by their programming.

on its way to implementing Lean Agile Flex technology in its powertrain plants. (Trial Tr. (Buttermore) at 1291:17–1292:5.)

The 6-speed transmission line installed at Warren Transmission between 2005 and 2007 embodied these Lean Agile Flex principles, and was specifically designed with sufficient flexibility to allow its major production assets—including nine of the Representative Assets—to operate in place for their useful lives. (Deeds Direct ¶ 40.) This equipment was more expensive but more flexible, consistent with GM’s focus on building a Lean Agile Flex powertrain system.

D. Defiance Foundry Overview

The Defiance Foundry sits on a 420 acre plot in Defiance, Ohio. GM built the Defiance Foundry in 1948 and has operated it continuously as a foundry for almost seventy years. (Thomas Direct ¶ 22; Trial Tr. (Thomas) 744:2–11.) It operates as a foundry to this day. (*Id.*; *see also* Trial Tr. (Thomas) 867:15–19.)

Plants 1 and 2 are the two primary manufacturing plants at Defiance Foundry, and a number of smaller buildings support the foundry operation. Plant 1 opened in 1948 and has approximately 1.6 million square feet of floor space. GM opened Plant 2 in 1964 and then expanded it in 1972. It consists of approximately 1.1 million square feet. (Thomas Direct ¶¶ 28–29 & Ex. A, at 49.)

The Defiance Foundry turns scrap metal and metal ingots into cast metal parts—such as engine components (iron and aluminum blocks and cylinder heads; iron crank shafts) and transmission parts. These parts are then shipped to GM engine and transmission plants (like Warren Transmission), where they are further machined and assembled into finished engines and transmissions. (*Id.* ¶ 23.)

Directly adjacent to Plant 1 and Plant 2 are a number of external areas that are essential to the operations of the foundry. On the Defiance premises are ponds that collect water laden with

The following exhibit shows an overhead view of the foundry and its surrounding areas, including Plants 1 and 2 located at the bottom of the exhibit.

25

(Thomas Direct, Figure 2.)

E. MFD Pontiac and Powertrain Engineering

The Metal Fabricating Division (Stamping) Pontiac facility (“MFD Pontiac”) is listed as one of the forty-two facilities on Schedule 1 of the Term Loan Collateral Agreement, and is a Material Facility for which a Fixture Filing was filed. (JPTO ¶ 70.) Accordingly, Defendants have a perfected security interest in any fixtures owned by Old GM at MFD Pontiac. (*Id.* ¶ 71.) GM Powertrain Engineering Pontiac (“Powertrain Engineering Pontiac”) is not listed on Schedule 1 of the Term Loan Collateral Agreement. (*Id.* ¶ 72.) The parties dispute whether the Lenders have a perfected security interest in any fixtures located in Powertrain Engineering Pontiac.

Powertrain Engineering Pontiac is a research and development facility where GM designs, engineers, develops, and tests engines and transmissions. (Buttermore Direct ¶ 42.)

The engineering that takes place at Powertrain Engineering Pontiac is not specific to the manufacturing and production at MFD Pontiac. (Trial Tr. (Buttermore) at 1311:18–1312:7.)

The work at Powertrain Engineering Pontiac has nothing to do with MFD Pontiac. (*Id.* at 1312:4–7.) Both facilities, however, get power, steam, and utilities by a utility trestle from the Central Utility Complex on the Pontiac North Campus. (Buttermore Direct ¶¶ 44–45.)

MFD Pontiac and Powertrain Engineering Pontiac have two different addresses and are located on opposite sides of the street. Powertrain Engineering Pontiac is located at 895 Joslyn Road, in Pontiac, Michigan. MFD Pontiac is located across the street (Glenwood Avenue) from Powertrain Engineering Pontiac at 220 East Columbia Ave. (Marquardt Direct ¶ 53.)

The street separating MFD Pontiac and Powertrain Engineering Pontiac is on a piece of land that Old GM deeded to the City of Pontiac, Michigan in 2008 to develop for public use. (Buttermore Direct ¶ 43; Trial Tr. (Buttermore) at 1312:8–10; Marquardt Direct ¶ 66). MFD Pontiac is located on a parcel currently numbered “14-17-476-002,” while Powertrain Engineering Pontiac is currently on parcel number “14-21-102-001.” (Marquardt Direct ¶ 61.)

F. The Forty Representative Assets

As noted above, Plaintiff’s Amended Complaint alleges that the lien on the collateral securing the Term Loan was not perfected as of June 1, 2009, and to the extent that some portion of the collateral was perfected by filings other than the umbrella UCC-1, the value of that portion of the collateral was less than the amount paid to Defendants and Defendants were not entitled to receive payment in excess of that amount. Twenty-six other Fixture Filings covered the fixtures in a number of Old GM U.S. facilities; those Fixture Filings were filed in the records of the counties in which such facilities are located.

Following the filing of the Amended Complaint, Plaintiff and Defendants engaged in initial discovery of the scope and value of the Term Loan collateral. Based on that initial

A description of each of the forty Representative Assets is set forth below. The Court has grouped the assets by asset-type, rather than in order of the numbers assigned by the parties to each of the Representative Assets.

1. Presses

a) Representative Asset No. 30

The TP-14 CS1-1 Transfer Press Danly ET-2 (“TP-14 Transfer Press”), which was located at GM Metal Fabricating Division (MFD) Mansfield (“Mansfield Stamping”), is a transfer press that processes metal coil through a single ram that transforms the metal using large dies to produce finished automotive body parts. (JPTO ¶ 103.) The asset was put into service in September 1987 and had an installed cost of \$4,636,106. (*Id.*) The press weighed 700 tons, stood 3 stories tall, and was 70 feet long and 55 feet wide. (Miller Direct ¶ 119.) It had double rolling bolsters that sat on rails installed in the concrete floor to allow for quick die changes. (*Id.*) The TP-14 Transfer Press was installed in a large pit and was mounted on four approximately four-foot by five-foot by twelve-foot reinforced concrete pillars that were secured to the bedrock below the plant. (*Id.*)

All of the presses, including the TP-14, were removed from Mansfield Stamping after it closed in 2010; none were sold with the building. (Trial Tr. (Miller) at 1149:15–23.) The process of removing the TP-14 Transfer Press was difficult, as the press could not be removed without disassembling it. (Miller Direct ¶ 126.) The removal project was scheduled to take three months. (*Id.*) It was sold by Maynards and Hilco in 2011 to Flex-N-Gate for \$1.15 million (including a 15% buyer’s premium). (JPTO ¶ 103; PX-96 (Bill of Sale Agreement between RACER and Flex-N-Gate Mexico).)

b) Representative Asset No. 31

The Danly 4000 ton press (“Danly Press”) is a single ram, standalone stamping press that is used at LDT to validate dies before they are used in the production presses. (Miller Direct ¶ 103.) It weighs 775 tons, stands 3 stories tall, and extends 30 feet long and 20 feet wide. (*Id.*) Installation of the Danly Press required excavation of a custom pit in which four large, steel-reinforced concrete foundation pillars were anchored to the bedrock. (*Id.*) The asset was originally put into service in October 1980 at the GM Indianapolis stamping plant to make truck body components and had an installed cost of \$2,729,407. (JPTO ¶ 104; Trial Tr. (Miller) at 1010:3–11.) It was moved and installed at LDT in 2003. (JPTO ¶ 104.)

The Danly Press is not a production press but is used instead to test or “tryout” new and repaired stamping dies without having to take one of LDT’s production presses temporarily out of operation. (Miller Direct ¶ 104.) To perform its “tryout” function, the Danly Press is linked with the other presses at LDT through a network of mobile die carriers and overhead cranes that are installed in specific locations to allow the large dies to be removed from the production presses, moved to a rework area, and installed on the Danly Press for testing. (*Id.*) The Danly Press was moved to LDT Stamping in 2003 and it took three to six months to remove it and prepare it for shipment. (JPTO ¶ 104; Trial Tr. (Miller) at 1128:23–1129:13.)

c) Representative Asset No. 29

The GG-1 Transfer Press, which was located at GM Metal Fabricating Division (MFD) Grand Rapids, is a transfer press that processes sheet metal blanks through a series of two rams that transform the metal using large dies to produce finished automotive body parts. (JPTO ¶ 102.) The press was put into service in September 1989 and had an installed cost of \$11,340,238. (*Id.*) The GG-1 Transfer Press weighed 1,100 tons, stood 3 stories tall, and extended 150 feet long and 75 feet wide. (Miller Direct ¶ 133.) It was installed in a sixteen to

twenty-foot deep pit on steel-reinforced concrete pillars anchored with pylons into the bedrock. (*Id.*) Support components were also installed to complete the press system, including a scrap conveyor, overhead crane, front-of-line component, and end-of-line component, and trenches were cut into the concrete floor to lay rails for the press's double rolling bolsters. (*Id.*)

The GG-1 Transfer Press was very similar to the Danly Press, although with a lower pressing capacity (3,000 and 1,500 tons for GG1 vs. 4,000 tons for the Danly Press), and it is likely that each press station of the GG-1 Transfer Press had the same basic components as the Danly Press—a bed and rolling bolsters, uprights, a slide, and a crown with top side drive system. (Goesling Direct ¶ 366.)

The GG-1 Transfer Press was left with Old GM and not included in the 363 Sale. It was sold by Maynards and Hilco with an electronic transfer rail system, and an end of line conveyor system as a single item (called a “lot”) at the equipment auction of the Grand Rapids plant in November 2010 for \$275,000 (excluding a 13.5% buyer's premium). (*Id.*; PX-94 (Asset list for Grand Rapids Auction); Goesling Direct ¶ 365.) It is not clear from the evidence at trial whether the GG-1 Transfer Press was sold for scrap value or for reuse; it was purchased by a press dealer, but the low sale price suggests scrap value. (Sofikitis Dep. Tr. at 69:22–70:1; Goesling Direct ¶ 369.) Removal of the press system for sale took over three months and left a sixty-foot by forty-foot hole in the plant floor. (Miller Direct ¶ 134.)

d) Representative Asset No. 32

The AA-11 Schuler No. 1 AA Crossbar Transfer Press (“AA Transfer Press”) is a 2,800 ton, 200-foot long, 125-foot wide, and 40-foot tall transfer press. (Miller Direct ¶ 72.) It is the largest press system employed by GM, and it is used to fabricate large, paint-ready body panels from stacks of sheet metal as part of the stamping operations at GM's LDT plant. (*Id.*) It uses five rams, ten rolling bolsters, and interchangeable tooling (called “dies”) to shape the sheet

metal. (*Id.*) The fabrication of body parts for vehicles is a necessary first step in the vehicle assembly process. (*Id.* ¶ 78.)

The AA Transfer Press was installed in 2003 and had an installed cost of \$33,767,895. (JPTO ¶ 105.) The installation of the AA Transfer Press required GM to excavate a 100-foot long, 50-foot wide, and 12-20-foot deep pit to hold the press. (Miller Direct ¶ 73.) Twelve reinforced concrete pillars were installed (each measuring approximately four feet long by five feet wide by twelve to twenty feet tall), and those pillars were mounted by pylons into the bedrock below the building. (*Id.*) The press was “stacked” in place after arriving in pieces at LDT. (*Id.*) During stacking, the press was secured to each of the twelve foundation pillars with a six-foot long, two to three-inch diameter steel rod. (*Id.*) GM dug trenches adjacent to the press to install rails on which the press’s ten rolling bolsters could ride. (*Id.*) The process of removing (or moving) the AA Transfer Press would take months, if not years, and cause significant disruption to operations and damage to the realty. (*Id.* ¶ 79.)

e) Representative Asset No. 33

The B3-5 Transfer Press System Incl. Destacker and End of Line (“B3-5 Transfer Press”) is a 3-ram transfer press system used by GM to make stamped metal body parts that can be assembled in the body shop at LDT and the other assembly plants supported by LDT’s stamping operations. (Miller Direct ¶ 85.) It weighs approximately 1,800 tons, stands 3 stories tall, and extends 260 feet long and 75 feet wide. (*Id.*) Installation of the B3-5 Transfer Press required GM to excavate an approximately 12- to 20-foot deep, 100-foot long, and 50-foot wide pit out of the floor of the building, and to install 8 reinforced concrete foundation pillars that are approximately 12 feet tall, 4 feet wide and 5 feet long. (*Id.*) This press system processes sheet metal blanks through a series of three rams that transform the metal using large dies to produce

finished automotive body parts. (JPTO ¶ 106.) The asset was put into service in 2003 and had an installed cost of \$27,682,072. (*Id.*)

GM included the front-of-line and end-of-line components of the press system in the same Asset ID as the B3-5 Transfer Press itself. (Miller Direct ¶ 86.) The front-of-line component is a “destacker,” which receives stacks of large metal blanks and then “destacks” them one at a time by feeding them into the press itself. (*Id.*) The end-of-line component receives the stamped finished panels from the press, provides an opportunity for manual quality inspection, and then prepares the stamped parts for delivery to the next operation. (*Id.*) Like the AA Transfer Press, the B3-5 Transfer Press’ fabrication of body parts for vehicles is a necessary first step in the vehicle assembly process. (*Id.* ¶ 92.) Also like the AA Transfer Press, the process of removing (or moving) the B-35 Transfer Press would take months, if not years, and cause significant disruption to operations and damage to the realty. (*Id.* ¶ 93.)

f) Regarding the Two Leased Presses

The Defendants concede that they do not have a collateral interest in the AA Transfer Press (Representative Asset No. 32), because it is leased—not owned—by GM. (JPTO ¶ 66.) Shortly after its installation, the AA Transfer Press became subject to a sale/leaseback agreement which included the following covenant:

The Lessee and the Lessor agree that the Equipment, each Unit and every Part thereof are severed from, and shall remain severed from, any real property and are readily moveable, and, even if physically attached to such property, it is the intention of the Lessee and the Lessor that the Equipment, each Unit and every Part thereof (i) shall retain the character of personal property, (ii) shall be removable without causing material damage to the real property, (iii) shall be treated as personal property with respect to the rights of all Persons whomsoever, (iv) shall not become part of any real property, and (v) by virtue of its nature as personal property, shall not be affected in any way by any instrument dealing with any real property. The Lessee shall not, without the prior written consent of the Lessor and, until the Lien of the Indenture shall have been discharged in

accordance with its terms, the Indenture Trustee, and subject to such conditions as the Lessor and, until the Lien of the Indenture shall have been discharged in accordance with its terms, the Indenture Trustee may impose for their protection, affix or install any Unit to or in any real property in such a manner as to cause or permit such Unit to become a fixture or subject to the rights of any Person having an interest in such real property.

(PX-283 at 41.)

Like the AA Transfer Press, the Defendants concede that they do not have a collateral interest in the B3-5 Transfer Press (Representative Asset No. 33) because it is leased. (JPTO ¶ 106.) Shortly after its installation, the press became subject to a sale/leaseback agreement with an identical provision as that in the AA Transfer Press lease, under which GM agreed to maintain the B3-5 Transfer Press as personal property. (PX-220 at 38.)

The parties agree that GM has other transfer presses, similar to the AA Transfer Press and B3-5 Transfer Press, in other facilities, that are not subject to sale/leaseback agreements with provisions mandating that the presses remain personal property. Defendants contend that such presses are fixtures; Plaintiff maintains they are not fixtures. The Court will address whether Representative Asset Nos. 32 and 33 would satisfy fixture criteria but for the sale/leaseback restrictions. In the absence of sale/leaseback provisions, the Court finds that Representative Asset Nos. 32 and 33 would be classified as fixtures.

2. Conveyor Systems

There are eight conveyors included among the Representative Assets. Two of the conveyors are at Warren Transmission: Power Zone Roller Conveyor (Representative Asset No. 3) and Button Up and Test Conveyor (Representative Asset No. 35). Five of the conveyors are at Lansing Delta Township Assembly: Paint Dip Conveyor (Representative Asset No. 6); Skid Conveyor (Representative Asset No. 16); P&F Conveyor (Representative Asset No. 17); Wheel & Tire Delivery Conveyor (Representative Asset No. 20); Skillet Conveyor System

(Representative Asset No. 21). One of the conveyors is at Defiance: Core Delivery Conveyor (Representative Asset No. 26).

a) Representative Asset No. 3

The Power Zone Roller Conveyor Automation TCH MOD 3, which is located at Warren Transmission, is a powered conveyor system that moves rough transmission housing castings through a number of Computer Numerically Controlled, or “CNC,” milling machines that mill the housings to GM’s specifications and then delivers the milled housings to smoothing and testing machines. The asset was put into service in February 2007 and had an installed cost of \$1,053,051. (JPTO ¶ 76.)

Asset No. 3 consists of a number of straight, fourteen-inch wide power roller conveyor sections, three overhead workpiece transfer bridges with light curtains, four rotary table conveyor sections for direction changes, and a human machine interface (“HMI”) control panel. (Goesling Direct ¶ 247.)

Asset No. 3 is largely attached to the realty by bolts; the overheard transfer bridges are supported by steel tube legs that are attached to the floor slab with lag bolts. (*Id.* ¶ 250.) The bridge supports are connected to the eight-foot long bridge track using bolts, and an underhung carriage is attached to the bridge track by four roller track wheels and can easily be removed at either end of the track. (*Id.*; JX-1027.)

b) Representative Asset No. 6

The Paint Dip Conveyor – ELPO Oven IMC, which is located throughout the LDT paint shop, is a conveyor system that carries vehicle bodies through the Electro-coat Paint-curing Operation, or ELPO, process. The conveyor spans all three operating levels of the paint shop and transports vehicle bodies through the ELPO system’s curing ovens. The asset was put into service in November 2006 and had an installed cost of \$1,107,185. (JPTO ¶ 79.)

ledger as part of this asset. The conveyor transports complete inner body subassemblies for the left side of the vehicle to the inner body framing station, where they are joined to other inner body frame components. The asset was put into service in November 2006 and had an installed cost of \$1,649,074. (JPTO ¶ 90.)

Asset No. 17 consists of over 2,000 linear feet of overhead conveyor track, a positioner unit, two chain drive units, two chain take-ups, trolley/load bar units, control cabinets, and access platforms and mezzanines. (Goesling Direct ¶ 138.)

Asset No. 17 is largely attached to the realty by bolts; the sections of the conveyor track are connected to each other with nut and bolt fasteners. (JX-1262; Goesling Direct ¶ 141.) The conveyor system is bolted to steel members that are suspended from the roof trusses. (JX-1266; Goesling Direct ¶ 141.)

f) Representative Asset No. 18

The General Assembly Conveyor: Vertical Adjusting Carrier, which is located at the Lansing Facilities, is a set of eight-seven vertical adjusting carriers that travel along an overhead rail, which is part of a separate eFAST ledger line. The carriers transport vehicle bodies through the chassis assembly line, which is where the suspension and vehicle powertrains are attached to the vehicle bodies. The asset was put into service in November 2006 and had an installed cost of \$4,141,896. (JPTO ¶ 91.)

The vertical adjusting carriers themselves are not permanently affixed to the building. (Goesling Direct ¶ 118.) Instead, the carriers' wheels ride along the top of the rail and are connected to it by gravity. (Trial Tr. (Stevens) at 165:18–167:23; Goesling Direct ¶ 115.) The rail for the Vertical Adjusting Carriers is attached to white steel beams within the facility that is in turn bolted to the building. (Trial Tr. (Stevens) at 165:18–167:23; Goesling Direct ¶ 118.)

However, Goesling and Thomas disagree on the permanence of the bolts connecting the conveyors to the realty. Goesling characterizes the bolts attaching the conveyor to the realty as “non-permanent.” (Goesling Direct ¶ 322.) In contrast, Thomas testified that

(Thomas Direct ¶ 43.) Thomas also notes that removing Asset 26 would entail “unbolting hundreds of bolts; cutting/removal of welding [. . . and the] removal of four guard posts, each embedded in concrete” (*Id.*)

3. *Robots*

a) Representative Asset No. 39

The CB 91 Robot is a robot at the Defiance Foundry that unloads engine cores from the CB 91 core making machine. The asset delivers each core to several work stations before delivering a complete core sub-assembly to a conveyor for further processing. The sub-assemblies are used later in the iron casting process at Powertrain Defiance. The asset was put into service in March 2005. (JPTO ¶ 112.)

The CB 91 Robot is mounted on a steel plate that is, in turn, attached with eight lag bolts to the floor. (Goesling Direct ¶ 346; *see also* Trial Tr. (Thomas) at 834:19–835:14, 838:18–24.) There are also two utilities connections to the CB 91 Robot: Electric and compressed air. (Trial Tr. (Thomas) at 835:18–25; *see also* JX-1579.) GM used a quick connect fitting¹¹ to connect the CB 91 Robot and the controller. (Trial Tr. (Thomas) at 837:3–6.)

The CB 91 Robot is itself made up of a six-axis robot and a standalone robot control cabinet. (Goesling Direct ¶ 342.) The robot controller rests directly on the building floor. (*Id.* ¶ 346; Trial Tr. (Thomas) 836:23–837:2; JX-1584.) The robot controller was designed with forklift carrying tubes and the cabinet top has four side-mounted eye hooks to assist with moving the controller. (Goesling Direct ¶ 347; *see also* JX-1584.)

Removal of the robot, without the baseplate, would take approximately two to two and a half hours. (Trial Tr. (Thomas) at 837:7–838:17.) Removing the baseplate would take roughly an additional thirty-five minutes. (*Id.* at 838:18–839:14.) Healing and reconcreting the floor would then take approximately three hours. (*Id.* at 839:15–25.) And to take the feed lines back to their source would take about six to eight hours. (*Id.* at 840:2–5.)

¹¹ A “quick connect fitting” is a utility outlet mechanism that provides multiple utilities through a single plug. (Trial Tr. (Stevens) at 90:10–92:10.)

The Fanuc M-710IB/70T Robot (the “Gantry”), which is located at Warren Transmission, is a Fanuc robot mounted on a gantry rail. The asset is used to move gears within a subassembly process before the finished gears are sent to the transmission assembly line. Defendants believe that the associated safety fencing and interlocks were included in GM’s fixed asset ledger as part of this asset; Plaintiff believes that the safety fencing was not included in GM’s fixed asset ledger as part of this asset. The asset was put into service in July 2007 and had an installed cost of \$270,101. (JPTO ¶ 95.)

The rectangular baseplate of the robot arm is attached to an underslung carriage with Allen bolts, and the carriage is moved along the rail with a drive system. (*Id.*; *see also* JX-1314.) Electrical wiring is fed to the robot through loose wiring contained in an open cable tray on top of the Gantry rail. (Goesling Direct ¶ 280; *see also* JX-1308.)

44

a) Representative Asset No. 1

The OP-150 Select consists of an automatic placement station, a shim dispenser with approximately twenty-six storage magazines, and a control panel with a human machine interface. (Goesling Direct ¶ 266.) A conveyor system (which is a separately capitalized asset) is used to carry the pallets with transmission cases through the Shim Select and Placement Machine. (*Id.*)

Loose wiring and quick connect fittings are used to supply power and data from the control panel to the Shim Select and Placement Machine. (Goesling Direct ¶ 270; *see also* JX-1004.)

b) Representative Asset No. 14

The Leak Test Base Machine, which is located at Warren Transmission, tests for fluid leaks in transmission housings after they have been manufactured and before they are sent to the transmission assembly line. This asset was put in service in July 2007 and had an installed cost of \$1,254,458. (JPTO ¶ 87.)

The Leak Test Machine is 30 feet by 25 feet by 12 feet, and weighs roughly 30,000 pounds. (Deeds Direct, Ex. A at 22.) It includes: (i) three individual test stands, each of which has a standalone fluid pump and delivery station; (ii) a pallet transfer conveyor, which runs through the three test stands; and (iii) three control cabinets (one for each test stand). (Goesling Direct ¶ 272.) The Leak Test Machine was customized to its place in the specific layout at Warren so that the conveyors on the Leak Test Machine would be aligned precisely with the height, width, and location of the conveyors feeding into and leading out of it. (Deeds Direct ¶ 72.) It is also attached to a high-pressure, steel-pipe plumbing connection to the plant's compressed air distribution system, to the plant's high-voltage (440-volt) power supply and to the deburring machine and pack out conveyor, which connects the Leak Test Machine to an unload robot. (Deeds Direct, Ex. A at 22.)

It is surrounded by the other machines in its module: a load robot, twelve CNC machines, a power zone conveyor, a deburring machine, and an unload robot. (Deeds Direct ¶ 76; Deeds Direct, Ex. A at 81.)

c) Representative Asset No. 23

The Aluminum Machining System, which is located at Warren Transmission, is an aluminum machining system that is connected to Computer Numerically Controlled, or "CNC," machines. The asset includes the piping that circulates clean, temperature controlled coolant to the CNC machines and also removes metal chips generated during the CNC milling process from

the coolant so the coolant can be recirculated to the CNC machining centers. The System is an 800,000-pound, 75-foot-long, 60-foot-wide, 25-foot-tall machine that is critical to the 6-speed line. (Deeds Direct ¶ 82; JX-1330; JX-1331; JX-1345.) The asset was put into service in June 2006 and had an installed cost of \$1,946,878. (Deeds Direct ¶ 87.)

The components of the Aluminum Machining System include two filtration units, a polish filter unit, a heat exchanger, a chip conveying system, piping and a control panel. (Goesling Direct ¶ 283.)

Plaintiff agrees with Defendants that the pits, trenches, and the piping that are components of Representative Asset No. 23 are fixtures. These portions of the asset were installed permanently. (*Id.* ¶ 291.) The trenches, which are integrated into the floor slab, would be destroyed as part of removal and would leave extensive unlined holes, constituting damage to the building. (*Id.*) The long runs of large diameter piping also would likely be destroyed during removal. (*Id.*)

The two main filtration units, made of welded steel and measuring approximately fifteen feet long, sixty feet wide and twelve feet tall, are essentially large steel tanks, with travelling filter belts and chip conveying equipment installed inside. (*Id.* ¶ 284.) The main filtration units are attached to the building floor with angle iron clips and lag bolts in several locations around the perimeter of the units. (*Id.*; *see also* JX-1321.)

The polish filtration unit is essentially a smaller version of the two main filtration units, measuring approximately six feet by thirty feet by ten feet. (JX-1333; Goesling Direct. ¶ 285.)

Drainage trenches have been installed in the floor surrounding the filtration units to collect water and coolant spillage. (Goesling Direct ¶ 284; *see also* JX-1333.)

further attachment. (JX-1354; JX-1349; Goesling Direct ¶ 295.) The connection between machine and pad serves to control vibrations. (Goesling Direct ¶ 295.)

The Base Shaping Machine is attached to the inlet and outlet conveyors that feed it, as well as to an electrical supply transformer and electrical control cabinets. All utilities that are provided to the Base Shaping Machine use bolted flange or threaded pipe connections. (JX-1355; JX-1347; Goesling Direct ¶ 296.)

The control panel rests directly on the floor slabs. (JX-1348; Goesling Direct ¶ 296.) Next to the control cabinet is a small transformer that is secured to the building floor by lag bolts. (JX-1351; Goesling Direct ¶ 297.)

Electrical power is supplied to the control cabinet from an overhead bus duct by wire in conduit; the control panel then feeds electrical power and data to the CNC Gear Shaper through loose wiring utilizing quick connect fittings. (JX-1351; Goesling Direct ¶ 296.)

Part loading and unloading conveyors, consisting of two ninety degree curves approximately five linear feet in length, are bolted to the Base Shaping Machine and the conveyor legs either rest on the building floor, or in some cases are secured to the floor by single lag bolts. (JX-1353; Goesling Direct ¶ 297.)

Finally, the hydraulic power pack, which pumps fluid to the Base Shaping Machine, has four leg pads that rest on the building floor and uses various quick connect data wiring for sensors and control. (Goesling Direct ¶ 297.) Hydraulic fluid is pumped to the CNC Gear Shaper through small diameter piping and attached using threaded compression fittings. (JX-1356; Goesling Direct ¶ 297.)

e) Representative Asset No. 25

The Liebherr Hobb Machine from St. Catharines, which is located at Warren Transmission, is a hobb machine manufactured by Liebherr. It is another type of Computer

Numerically Controlled, or “CNC,” machine and is part of the process of machining or cutting steel blanks into transmission gears that are used in GM transmissions. The Liebherr Hobb weighs approximately 33,000 pounds and is 12 feet long, 15 feet wide and 10 feet tall. (Deeds Direct ¶ 144; JX-1380; JX-1385.) To keep the machine from moving when the horizontal forces of the cutting tools inside the Liebherr Hobb are applied to cut the gear blanks, the Liebherr Hobb is bolted to the floor. (Deeds Direct ¶ 144; Trial Tr. (Deeds) at 692:7–9.)

The asset was moved from GM’s St. Catharines, Ontario facility to Warren Transmission in 2008. It had an installed cost of \$1,192,377.¹² (JPTO ¶ 98.)

The Liebherr Hobb “consists of: (i) a standalone human-machine interface (“HMI”) control cabinet; (ii) the gear hobbing machine; (iii) two hydraulic power packs; and (iv) an entry/exit conveyor section to load and unload parts.” (JX-1368; JX-1373; JX-1381; Goesling Direct ¶ 309.)

The exit conveyor belt is separate from the main conveyor belt and is connected to the main conveyor with nut and bolt fasteners. (Goesling Direct ¶ 313; JX-1383.) The exit conveyor frame is constructed of modular aluminum extrusions that allow for multiple configurations and various interchangeable parts. (Goesling Direct ¶ 313; JX-1375; JX-1376.) The exit conveyor is attached to the frame of the gear hobbing machine in four places (two on each side of the conveyor) for stability. (JX-1375; JX-1376; Goesling Direct ¶ 315.) Certain sections of the conveyor frame are stabilized by a bracket that is affixed to the building floor with a lag bolt. (JX-1382; JX-1383; Goesling Direct ¶ 315.)

¹² The asset was installed and used in Old GM’s St. Catharines, Ontario facility from 2005 to late 2007. (Goesling Direct ¶ 312; Trial Tr. (Deeds) at 517:21–518:7.) Two years after GM purchased the asset for use at GM’s St. Catharines facility, and well before the end of its useful life, the asset was transported and installed for use at Warren Transmission. (Trial Tr. (Deeds) at 513:23–514:23; Goesling Direct ¶ 312.)

Finally, the connections to the machinery for electrical power, data wiring and piping utilize methods such as loose cabling or flanged joints that are bolted together, allowing for easy disconnection between the machine and the piping or wiring. (*See* JX-1367; JX-1369; Goesling Direct ¶ 315.)

f) Representative Asset No. 36

The Helical Broaching Equipment, which is located at Warren Transmission, is a type of Computer Numerically Controlled, or “CNC,” machine used to cut gear teeth on a steel gear blank for use in GM transmissions. It weighs approximately 90,000 pounds and is 18 feet long, 15 feet wide, and 20 feet tall. (Deeds Direct ¶ 123; Trial Tr (Deeds) 633:10–16.) Like the Base Shaping Machine (Representative Asset No. 24) and the Liebherr Hobb (Representative Asset No. 25), the Helical Broach is part of the gear-making processes in the 6-speed line. It is located in the one area of the Warren facility that provides sufficient roof clearance for its twenty-foot height. (Deeds Direct ¶ 123; Trial Tr. (Deeds) at 631:11–632:16.) The main components of the asset include a broaching machine, a standalone control and electrical cabinet, a chip conveyor and filtration system, a hydraulic powerpack, and a centralized lubrication system. (JX-1550; Goesling Direct ¶ 299.) The asset was put into service in June 2006 and had an installed cost of \$1,472,023. (JPTO ¶ 109.)

The Helical Broach is mounted on four heavy duty isolation pads, which are bolted to the machine base and rest in a drip pan that is sitting on the building floor. (JX-1541; Goesling Direct ¶ 302; Trial Tr. (Deeds) at 629:4–631:10.) In addition to several attachment points, Representative Asset No. 36 is held in place by its enormous weight and size. (Trial Tr. (Deeds) at 630:21–631:7; Goesling Direct ¶ 305.) Three small, six foot high, self-supporting operator platforms are attached to the Helical Broach with bolts, and the platform legs simply rest on the building floor. (Goesling Direct ¶ 302.)

Helical Broaches have previously been installed in a pit, but advances in techniques and procedures now dictate that these types of assets be situated above ground. (Trial Tr. (Deeds) at 635:10–15; Goesling Direct ¶ 307.)

The Helical Broach is integrated with the conveyor that feeds it and with an electrical power transformer and electrical panels. (Trial Tr. (Deeds) at 630:21–631:7; Deeds Direct ¶ 124.) The Helical Broach is also integrated with the plant's centralized chilled water supply system and mist collection systems via hard steel piping that runs to the precise location of the Helical Broach. All utilities attached to the Helical Broach use connections (such as a bolted flange) that allow for disconnection or modification. (Goesling Direct ¶ 302.) The standalone control and electrical cabinet is secured to the building floor by lag bolts. (Trial Tr. (Deeds) at 630:21–631:7; Goesling Direct ¶ 303.) The control and electrical cabinet was designed and constructed with forklift carrying tubes and top-mounted eye-bolts to assist with movement of the machine. (JX-1545; Goesling Direct ¶ 303.) Next to the control cabinet is a small transformer that is secured to the building floor by lag bolts. (Goesling Direct ¶ 304; Trial Tr. (Deeds) at 630:21–631:7.) The hydraulic powerpack, which sits next to the Helical Broach, is mounted on vibration pads that simply rest on the building floor. (JX-1541; Goesling Direct. ¶ 304.)

A central lubrication pumping unit is attached to the side of the hydraulic powerpack reservoir, and connected to the broaching machine with flexible hose. (JX-1548; Goesling Direct ¶ 304.) Finally, a coolant filtration system with a chip conveyor is bolted to the side of the Helical Broach and runs on the building floor between the Helical Broach and the control cabinet. (JX-1547; Goesling Direct ¶ 304.)

a) Representative Asset No. 27

The hot blast turbine blower, which pulls air from the outside to send to the heat recuperator, is a contained metal turbine blower that is bolted to a raised cement platform. (*Id.*; *see also* JX-1420; JX-1421.)

The scrubber vessel, which removes fine particulate matter from the air received from the heat recuperator and releases the cleaned air through stacks, is a large vessel approximately fifty-seven feet tall and eighteen feet in diameter that extends through multiple floors of the building. (Goesling Direct ¶ 326; *see also* JX-1435; JX-1423.)

Representative Asset No. 27 is necessary only to the iron casting process and thus is not particularly useful in connection with a different foundry process, such as making aluminum castings. (Goesling Direct ¶ 329.)

b) Representative Asset No. 28

100 Ton Vertical Channel Holding Furnace, which is located at GM Powertrain Defiance, is a furnace that holds molten iron at a stable temperature until the mold line at Powertrain Defiance requires the molten iron. It was approximately 12 feet in diameter and 16 feet high and held up to 100 tons of molten iron at a stable, molten temperature (2,500 degrees Fahrenheit for iron). The asset was put into service in December 2007 and had an installed cost of \$4,174,288. The asset was removed in 2011.

The 100 Ton Vertical Channel Holding Furnace was comprised primarily of the holding furnace, a pit with foundation and equipment mounting pedestals, a control panel, and associated utilities. (Goesling Direct ¶ 332.)

The 100 Ton Vertical Channel Holding Furnace was installed in 2007 as part of the project of moving the malleable iron business to Defiance from a foundry in Saginaw, Michigan, which was shut down in 2007. (Trial Tr. (Thomas) at 822:14–23; *see also* Goesling Direct ¶ 336.)

Thus, GM knew at the time the holding furnace was installed that the malleable iron product would only be needed for about three to four more years. (Trial Tr. (Thomas) at 826:16-20.)

As reflected in the June 2009 eFAST, New GM assigned a three-year depreciable life to Representative Asset No. 28. (*Id.* at 827:25–828:4; Goesling Direct ¶ 336; PX-0219 (Asset ID: 1000991251).) In contrast, GM assigned a depreciable life of sixteen years to two similar Ajax Holdings Furnaces at Defiance. (PX-0219 (Asset IDs: 100025421 (Ajax Induction Holding Furnace) & NJL6082100 (130 Ton Ajax Holding Furnace).))

55

c) Representative Asset No. 38

56

GM classified Representative Asset No. 38 as personal property for tax classification purposes. (*Id.* ¶ 340; *see also* PX-0231.)

The P&H 7 1/2 Ton Charger Crane 6E Cupola (“Charger Crane”), which is located at GM Powertrain Defiance, consists of a charging bridge crane, suspended above the ground, that moves along rails (which were part of a separate eFAST ledger line) within a raw material bay at Powertrain Defiance. The Charger Crane itself weighs 70 tons, spans approximately 100 feet, and is 20 feet wide and 10 feet high, and is suspended 55 feet above the ground by two runway rails, hovering over incoming railcars in a “charge yard.” (Thomas Direct ¶ 112 & Ex. A at 13; JX-1602.) The Charger Crane travels along the runway rails and lowers a 4-foot-diameter magnet to lift up to 15,000 pounds of scrap metal (the foundry’s “raw materials”) from those railcars. (Thomas Direct ¶ 111; JX-1609 (video of asset); JX-1725.) The Charger Crane then moves across the yard and delivers the scrap metal to a feeder / conveyor system that transports

6. *Assets Located in the Paint Shop*

a) Representative Asset No. 5

The Paint Circulation Electrical System, which is located at the Lansing Facilities, is a paint mix and circulation electrical system that consists of electrical distribution and control cabinets that support the paint mixing and circulation equipment for the paint shop. The asset is bolted to a custom four-inch raised concrete foundation that allows the Paint Circulation Electrical System to sit above the floor, protected from any spill or flood. (Topping Direct ¶ 63; Trial Tr. (Topping) at 913:5–18.) The asset was put into service in November 2006¹³ and has an installed cost of \$1,899,672.

As the Avoidance Trust concedes, removal of the asset would, as a functional matter, stop all paint application operations at LDT. (Topping Direct ¶ 68; Trial Tr. (Goesling) at 3255:23–3256:3.) Representative Asset No. 5 provides electrical power for paint process equipment. (Goesling Direct ¶ 176.) The asset includes two motor control center (“MCC”) cabinets and two control cabinets. (*Id.*) Both MCC cabinets are resting on a four-inch raised concrete pad without further methods of attachment. (*Id.* ¶ 180; *see also* JX-1055.)

Incoming power is fed by overhead wire through conduit and conduit supports are bolted to the top of the cabinets. (Goesling Direct ¶ 180; *see also* JX-1059.) The two control cabinets are similar in construction to the MCC cabinets but are much smaller in size and secured to the concrete pad by several lag bolts. (Goesling Direct ¶ 180; *see also* JX-1065.) It is also connected to thousands of feet of electrical conduit that GM embedded in the concrete floor.

¹³ When purchasing this asset, GM specified to the manufacturer which off-the-shelf components were needed, such as the appropriately sized variable-frequency drive or motor starter, and the manufacturer assembled the requested components and sold the asset to GM. (Trial Tr. (Goesling) at 3256:17–25; 3257:12–23.)

Moreover, the Paint Circulation Electrical System is connected to hard conduit that carries power from the Paint Circulation Electrical System to the paint mix room. (Topping Direct ¶¶ 64, 66 & Ex. A at 30; Trial Tr. (Topping) at 909:25–910:22.)

b) Representative Asset No. 7

Paint Top Coat Automation Software, which is located at the Lansing Facilities, is software that assists in coordinating the operation of the primer and top coat/clear coat conveyors and paint process equipment, such as Representative Asset No. 9 (the TC2 CC Bell Zone). The asset was put into service in November 2006 and had an installed cost of \$200,000.

Users access the Top-Coat Software on nine separate monitors located on terminals in the control room adjacent to the top-coat spray booth (a conceded fixture). (Topping Direct ¶¶ 78, 86; *see also* Trial Tr. (Topping) at 924:13–16.) While a user can control certain spray parameters (air pressures, bell speeds, voltages, fluid deliveries) with the Paint Top Coat Automation Software, the software does not operate the spray equipment. Each piece of spray equipment has its own software loaded onto it. (Trial Tr. (Topping) at 932:15–934:23.) Rather, Representative Asset No. 7 allows for access to data to monitor, but not to operate, the paint assets. (*Id.* at 932:15–934:13.) And if the Paint Top Coat Automation Software were to malfunction, the spray equipment would continue to run. (*Id.* at 952:12–17; 954:5–14.)

The Paint Top Coat Automation Software does not have a physical presence—it is an intangible asset that “exists” within a computer data storage device and can be transferred to any other compatible computer device without damage to the realty or software. (Goesling Direct ¶¶ 186, 189.)

Mr. Topping concedes that the Paint Top Coat Automation Software could be loaded onto another computer and perform the same function, and also concedes that the computer on

The Top-Coat Bells system, which is located at the Lansing Facilities, is a set of paint applicator machines or “Bells” mounted overhead or installed through the walls of one of the spray booths in the paint shop. Specifically, there are a set of twelve paint applicators (or “Bells”) that form a “bell zone” within the top-coat spray booth. (Topping Direct ¶ 75.) There are eight vertical Bells and four horizontal overhead Bells, all of which are part of the walls of the top-coat spray booth. (*Id.*) Each Bell cabinet has a rigid steel frame that is bolted to the floor and engineered into the booth structure in a way that creates a hermetic seal. (*Id.*; Trial Tr. (Topping) at 923:22–924:4.) This air-tight seal is critical to the painting process. (Topping Direct ¶ 75; Trial Tr (Topping) at 924:5–12.) Controls on the back of the Top-Coat Bells can be accessed without entering the booth. (Topping Direct ¶ 75; Trial Tr. (Topping) at 923:6–21.)

Incoming power, data wiring, and compressed air are fed to the Paint TC2 CC Bell Zone from a mixture of overhead cable trays, conduit, and pipe. (Goesling Direct ¶ 190; *see also* JX-

The robot itself is bolted to a pedestal, which is in turn secured to a trolley with Allen bolts; the trolley itself moves freely along a slide system metal rail that is lag bolted to the floor. (*Id.*; JX-1105.)

A system control panel, which operates the scanning system and robot together, is attached by a handful of lag bolts to the floor and has eye bolts mounted on the top as lift points. (Goesling Direct ¶¶ 87, 90; JX-1111.)

In 2016, GM relocated Representative Asset No. 10 within the Lansing Regional Stamping facility as part of the expansion of the body shop at Lansing Delta Township Assembly. (Miller Direct ¶ 158; Trial Tr. (Stevens) at 425:6–17; Goesling Direct ¶ 91.) The

66

relocation of Representative Asset No. 10 took place over a weekend. (Trial Tr. (Miller) at 1223:20–1225:3.)

8. *Miscellaneous Assets*

a) Representative Asset No. 13

Body Shop Weld Bus Ducts, which is located at the Lansing Facilities, consists of the electric power distribution weld bus ducts for the welding operations in the body shop. The weld bus ducts deliver electrical power to body shop equipment, such as robot mounted weld guns and other weld equipment. The bus ducts are installed overhead throughout a large portion of the body shop, and run over 10,000 feet in length. (Stevens Direct ¶ 182.) The asset was put into service in July 2006 and had an installed cost of \$3,993,837.

The BS Weld Bus Duct is a modular system that is constructed using standard two to ten-foot long linear sections and various elbows, with the sections connected to each other with a single bolt. (Goesling Direct ¶¶ 157, 161; Trial Tr. (Stevens) at 185:5–17.) The majority of the BS Weld Bus Duct is attached to the building roof trusses with threaded rod and I-beam clamps. (JX-1181; JX-1182; Goesling Direct ¶ 161; Trial Tr. (Stevens) at 185:5–17.) Representative Asset No. 13 is made up of approximately 10,000 feet of bus ducts. (Trial Tr. (Stevens) at 182:18–25.)

The Weld Bus Duct layout was determined at the time LDT was built to align with the layout of the framing line and subassembly cell configuration, so that the Weld Bus Ducts would be capable of supporting all of the welding equipment that GM had specified for installation in the LDT body shop. Given the broad expanse of the Weld Bus Ducts throughout the LDT body shop, removal would take weeks and would cause the LDT body shop, and by extension all of LDT, to be idled until an identical asset was put in place. (*Id.* at 182:18–185:4; Stevens Direct ¶ 183.)

The pit holding Representative Asset No. 34 was filled in after removal and the area remains empty, without any evidence of the prior installation. (JX-1518; JX-1515; Goesling Direct ¶ 264.) The area was healed by pouring a four-inch concrete floor over the area where the asset resided, and is ready for reuse by GM for purposes suitable on four-inch concrete floors. (JX-1522 (video of Representative Asset No. 34); Goesling Direct ¶ 264.)

Courtyard Enclosure, which is located at Warren Transmission, is an enclosure that is currently being used for part storage. The asset was put into service in December 1982 and had an installed cost of \$8,384,325. Around 2012–2013, the Courtyard Enclosure was extensively renovated in preparation for the installation of GM’s new electric drive unit for the Chevy Volt. (Deeds Direct ¶ 201 & Ex. A at 10; DX-1082; Trial Tr. (Deeds) at 585:24-586:14.)

Construction of the Courtyard Enclosure consisted of the removal of an exterior wall, construction of a concrete floor at the same level of the adjoining building areas, and the addition of structural steel framing, a steel truss roof structure with metal panel decking, fluorescent

Lansing Delta Township Assembly Utility Services, which is located at the Lansing Facilities, is the “CUC” for the Lansing Facilities. The asset includes the building itself, as well as the water, air, heating, processing and electric systems contained within it. The asset was put into service in April 2006 and had an installed cost of \$73,997,467. (JPTO ¶ 84.)

The CUC building also includes various utilities common to most industrial real estate. (JX-1118; JX-1123; Goesling Direct ¶ 198.) These common utilities include heating and ventilation systems; a sprinkler system for fire protection; underground utility piping for natural gas, water, and sewer; an underground storm water piping system; a sanitary waste piping system; a lighting system including interior lighting, outdoor lighting, exit lights, and emergency lighting; a fire alarm system; a security system; voice and data communication systems; and an electrical power distribution system. (Goesling Direct ¶ 199.) The parties agree that the portions of the CUC consisting of ordinary building material are not fixtures. (JPTO ¶ 116; Goesling Direct ¶ 200.)

The component assets contained within the CUC are described briefly below. The Court will refer generally to the components within the CUC, but not the CUC building itself, as the “CUC Systems.”

Component	Description
Pumps	<p>The assets are mounted on a skid that is bolted to a four-inch-thick pad. JX-1116. (Goesling Direct ¶ 205.)</p> <p>Electrical power is delivered to the Pumps by flexible cabling or wire in metal conduit. (<i>Id.</i>)</p>
Compressed Air System	<p>The asset includes four air compressors and four air dryers that generate compressed air for GM’s production needs at Lansing Delta Township. (<i>Id.</i> ¶ 215.)</p> <p>The compressors are bolted to a four-inch concrete pad. (JX-1119; Goesling Direct ¶ 217.) Two of the compressors and all of the air dryers are mounted on skids which contain lift points at each corner. (JX-1145; Goesling Direct ¶ 217.)</p> <p>Maynards/Hilco sold three auction lots comprised of fifteen air compressors and five air dryers from the Moraine and Pontiac facilities in 2010 for a total of \$80k. (PX-0348B - Asset 11(a)-0003 (rows 11928, 11929, and 11930).)</p>
Hot Water Boiler	<p>The asset consists of three natural gas fired boilers that produce hot water for process use in the paint building, not for use in the building generally. (JX-1156; Goesling Direct ¶ 223.)</p> <p>The boilers are each mounted on a steel skid that is secured to a four-inch-thick concrete pad with lag bolts. (JX-1156; Goesling Direct ¶ 225.)</p> <p>Incoming electrical power is delivered through loose cabling contained in reconfigurable metal cable trays and wire in conduit. (Goesling Direct ¶ 225.)</p>
Water Treatment System	<p>The asset is comprised of two reverse osmosis units, a zeolite resin water softening system, a HMI control panel, and two 60,000 gallon fiberglass tanks. (JX-1120; JX-1135; JX-1122; Goesling Direct ¶ 226.) The water treatment system provides filtered and softened water for use in the painting process, not the building generally. (Goesling Direct ¶ 226.)</p> <p>The reverse osmosis units and water softening system are both skid-mounted and the skids are bolted to a four-inch thick concrete pad. (JX-1122; Goesling Direct ¶ 228.) Electrical and data cabling are fed to the reverse osmosis systems through flexible wiring in reconfigurable cable trays. (Goesling Direct ¶ 228.)</p>

	<p>The HMI control panel is bolted to the floor and has two top-mounted eye bolts which serve as lift points. (JX-1154; JX-1121; Goesling Direct ¶ 228.)</p> <p>The water holding tanks are enormous in size (approximately twelve feet by thirty feet). (Goesling Direct ¶ 229.)</p>
Electrical Power Distribution	<p>The asset consists of motor control cabinets, switchgear, and circuit breakers that are personal property and wiring that is a fixture. (JX-1041; Goesling Direct ¶ 208.) Other than the wiring, the components of the asset are bolted to the CUC building structure or to the floor. (Goesling Direct ¶ 210.)</p>
Chilled Water System	<p>The asset consists of five electric motor driven centrifugal chillers (personal property) and a cooling tower and a 3.3 million gallon welded steel tank (fixtures). (<i>Id.</i> ¶ 219.) The system supplies cold water exclusively for use in the manufacturing operations at the Lansing Delta Township facility. (<i>Id.</i>)</p> <p>The chillers simply rest upon a four-inch-thick concrete pad without any attachment. (<i>Id.</i> ¶ 221.) Electrical power and data cabling is fed to the chillers via loose cable contained in reconfigurable cable trays and the chillers have several lift points. (JX-1146; Goesling Direct ¶ 221.)</p> <p>The chilled water tank is very large—having a capacity of 3.3 million gallons—and although only attached via gravity, its welded steel construction means it would be destroyed during removal. (Goesling Direct ¶ 222.)</p> <p>Similarly, the cooling tower was likely field-erected and would be destroyed during removal. (<i>Id.</i>)</p>
Wastewater Treatment System	<p>The asset is primarily comprised of two filter presses, two flocculation tanks, a mezzanine structure, two parallel plate clarifiers, a sludge conditioning tank, and two vertical ELPO waste tanks (personal property) and three batch wastewater holding tanks and a sludge holding tank (fixtures). (<i>Id.</i> ¶ 230.) The wastewater treatment system treats liquid industrial waste from the Lansing Delta Township facility. (<i>Id.</i>)</p> <p>The two filter presses are lag bolted to the floor and have an active secondary market. (JX-1131; JX-1130; Goesling Direct ¶ 232.)</p> <p>The flocculation tanks are affixed to a six-inch-thick concrete footing with lag bolts. (Goesling Direct ¶ 233.)</p> <p>As with all of the mezzanines used by GM, the mezzanine consists of sections bolted together and then bolted to the building and other pieces of equipment. (JX-1132; Goesling Direct ¶ 234.) Similarly, the structural supports for the mezzanine are connected together with nuts and bolts. (JX-1115; Goesling Direct ¶ 234.)</p>

	<p>The two plate clarifiers are affixed to concrete pads with lag bolts and they each have lift points on top. (JX-1133; JX-1115; Goesling Direct ¶ 235.)</p> <p>The two vertical ELPO waste tanks are large, but are attached to a concrete foundation with lag bolts. (JX-1113.)</p> <p>The sludge conditioning tank is attached with lag bolts to an eight-inch-thick concrete footing. (Goesling Direct ¶ 238.)</p> <p>The three batch wastewater tanks are very large (twenty-five feet by thirty feet) field fabricated, welded steel tanks. (JX-1151; Goesling Direct ¶ 236.) Although only attached by gravity, the size, weight, and method of construction of these tanks render movement of these assets wholly impractical. (Goesling Direct ¶ 236.)</p> <p>The sludge holding tank is fourteen feet in diameter by fourteen feet in height and would be impossible to remove without damage to either the asset or the building. (JX-1125; Goesling Direct ¶ 239.)</p>
Piping	<p>The asset includes all piping within the CUC building until five feet outside the CUC building. (Goesling Direct ¶ 204.) The Piping carries compressed air, exhaust gases, and fluids throughout the CUC building and to the Lansing Delta Township facility. (<i>Id.</i>) The asset would be destroyed on removal. (<i>Id.</i>)</p>
43 Air Handling Units (“AHU”)	<p>The asset could not be inspected but its location on the roof suggests that removal would leave a hole in the roof. (<i>Id.</i> at ¶ 214.) Removal would also likely damage the material used for installation of a typical AHU, such as sheet metal flanges and flashing along with any ductwork that is included in this asset. (<i>Id.</i>)</p>

The CUC is subject to three agreements relating to its construction, financing, maintenance, and use: (a) the Utility Services Agreement between Delta Township Utilities II, LLC (“Delta II”) and Old GM – Worldwide Facilities Group, dated April 14, 2004 (the “USA”) (JX-13); (b) the Tri-Party Agreement by and among Delta II, as debtor, GMAC Commercial Holding Capital Corp. (together with its successors in interest, “GMAC”), as lender, and Old GM, dated as of April 14, 2004 (JX-12); and (c) the Loan and Security Agreement by and between GMAC, as lender, and Delta II, as debtor, dated as of April 14, 2004 (the “LSA” and collectively with the USA and the Tri-Party Agreement, the “CUC Agreements”) (JX-14). (JPTO ¶ 67.) Delta II was the utility operator of the CUC. Under the USA, GM granted certain

rights in the CUC Systems to Delta II, including current title to the CUC. (JX-13.) Under the LSA, Delta granted GMAC a security interest in Delta II's own interest in the CUC Systems. (JX-14.) GM retained the residual right to purchase the CUC at the expiration of the USA for only \$10. (JX-13 at 125.)

10. Assets the Trust Concedes are Fixtures

a) Representative Asset No. 2

General Assembly Pits & Trenches, which is located at the Lansing Facilities, consists of various pits and trenches required for installation of certain machinery and equipment used in the general assembly of vehicles, including several conveyors. The Pits & Trenches houses the Final Line Skillet Conveyor (Representative Asset No. 21), among other conveyors and equipment. (Stevens Direct ¶¶ 270–71.) The asset was put into service in July 2006 and had an installed cost of \$2,307,597.

b) Representative Asset No. 4

Paint Building Lines – Process Waste ELPO (“ELPO Waste System”), which is located at the Lansing Facilities, is the waste processing system for the Electro-coat Paint Operation, or ELPO system. The ELPO Waste System asset includes a trench, more than 1,000 feet of piping, and pumps. As the name suggests, the ELPO Waste System captures waste material that drains from tanks used for the ELPO process. The process waste from the ELPO paint system is then gravity-fed into the ELPO Waste System through manually operated valves and piping. The waste flows from the trench to a series of pumps, which then move the ELPO waste from the sump station through the walls and overhead pipes of the paint building to the filtration system at the building's Central Utility Complex. (Topping Direct ¶ 57.)

The ELPO Waste System is just one component of the larger ELPO system, which along with pre-treatment systems represents roughly twenty-five percent of the paint shop. (*Id.* ¶ 58.)

Without the ELPO Waste System, the entire ELPO process could not function; and without the rest of the ELPO process, the ELPO Waste System—which the Avoidance Trust concedes is a fixture—would likewise have no value. (*Id.*) The asset was put into service in April 2006 and had an installed cost of \$935,780.

IV. LEGAL STANDARDS REGARDING FIXTURES

A. Michigan’s Three Part Fixture Test

The Michigan Supreme Court has held: “Property is a fixture if (1) it is annexed to the realty, whether the annexation is actual or constructive; (2) its adaptation or application to the realty being used is appropriate; and (3) there is an intention to make the property a permanent accession to the realty.” *Wayne Cty. v. William G. Britton & Virginia M. Britton Trust*, 563 N.W.2d 674, 676 (Mich. 1997).

I. Attachment

“[A]n object will not acquire the status of a fixture unless it is in some manner or means, albeit slight, attached or affixed, either actually or constructively, to the realty.” *Wayne Cty.*, 563 N.W.2d at 678 (quoting 35 AM. JUR. 2d, Fixtures, § 5, at 703); *see, e.g., In re Joseph*, 450 B.R. 679, 692 (Bankr. E.D. Mich. 2011) (finding that a mailbox hanging on two screws was attached to house); *Grand Traverse Cty. Land Bank Auth. v. Verizon Wireless*, No. 332804, 2017 WL 1908535, at *2 (Mich. Ct. App. May 9, 2017) (finding that a cell tower attached to anchors in ground only by three wires was a fixture; annexation satisfied “even where the attachment is ‘slight’”).

“Actual” annexation occurs when an item is affixed to real property physically; the use of bolts to affix an asset will usually suffice. *See, e.g., Cincinnati Ins. Co. v. Fed. Ins. Co.*, 166 F. Supp. 2d 1172, 1180 (E.D. Mich. 2001) (noting that a milling machine was “anchored and

Similarly, in *Smith v. Blake*, the Michigan Supreme Court held that, among other items, a metal lathe and a “cupola furnace” used in a foundry and manufacturing business were “adapted” to the realty because the building at issue had been “erected many years [before] for a foundry and machine shop,” and the assets were “adapted to the business for which the building was erected.” 55 N.W. 978, 979 (Mich. 1893).

77

Moreover, “[t]he permanence required is not equated with perpetuity.” *Tuinier*, 599 N.W.2d at 119 (quoting *Mich. Nat’l Bank*, 293 N.W.2d at 627). Rather, “[i]t is sufficient if the item is intended to remain where affixed until worn out, until the purpose to which the realty is devoted is accomplished or until the item is superseded by another item more suitable for the purpose.” *Mich. Nat’l Bank*, 293 N.W.2d at 627; *Grand Traverse*, 2017 WL 1908535, at *3; *In re Joseph*, 450 B.R. at 690.

Courts consider various factors to infer the intent of an asset owner. These factors include (i) “the purpose for which [the asset] was affixed,” *Wayne Cty.*, 563 N.W.2d at 680, (ii) whether the asset has been “physically integrated” with other on-site machinery or utilities, *Mich. Nat’l Bank*, 293 N.W.2d at 628, (iii) whether the asset was “specially modified to be attached to the realty,” *Cliff’s Ridge*, 123 B.R. at 759, (iv) “the nature of the [asset] affixed,” such as its size and weight, *Wayne Cty.*, 563 N.W.2d at 680, and (v) “the manner of annexation.” *Id.*

Courts may also infer intent where either the asset has been customized to fit within the particular realty or the realty has been customized to accommodate the asset. For example, in *In re Joseph*, the court held that “custom-sized” window blinds were intended to be permanent, as was a refrigerator that was “designed to blend with, and appear to be part of, the kitchen cabinetry.” 450 B.R. at 696–97; *see also Cliff’s Ridge*, 123 B.R. at 759 (chairlift was a fixture in part because it was “engineered to be erected on the realty” and had been “specially modified to be attached to the realty”). Permanently altering the realty in such a manner as to accommodate a particular asset naturally is an indication that the installation was meant to be permanent.

B. Ohio’s Three-Part Fixture Test

Ohio, like Michigan, has a three-part test: (1) “annex[ation] to some extent to the realty”; (2) “application to the use or purpose to which the realty to which it is attached, is devoted”; and

(3) “actual or apparent intention upon the part of the owner of the chattel in affixing it to the realty to make such chattel a permanent part of such realty.” *Holland Furnace Co. v. Trumbull Sav. & Loan Co.*, 135 Ohio St. 48, 52 (1939) (citing *Teaff v. Hewitt*, 1 Ohio St. 511 (1853)).

1. *Attachment*

Ohio law regarding attachment is substantially similar to Michigan law. *See In re Szerwinski*, 467 B.R. 893, 902 (B.A.P. 6th Cir. 2012) (“Slight or constructive attachment is all that is required as long as the other two elements are established.”). Like in Michigan, in Ohio fixtures may be attached to the realty in different ways. *See e.g., Whitaker-Glessner Co. v. Ohio Sav. Bank & Tr. Co.*, 22 F.2d 773 (6th Cir. 1927) (holding machines in vegetable-canning plant annexed “by bolts or screws and connected together” are fixtures); *In re Kerr*, 383 B.R. 337, 342 (Bankr. N.D. Ohio 2008) (holding that cabinets and appliances “attached to . . . something attached to the real property” are fixtures).

2. *Adaptation*

The Supreme Court of Ohio held in *Teaff v. Hewitt*, a seminal fixture case in Ohio, that the adaptation prong requires “[a]pplication to the use, or purpose, to which that part of the realty with which it is connected, is appropriated.” 1 Ohio St. 511 (1853); *see also Masheter v. Boehm*, 307 N.E.2d 533, 537 (Ohio 1974) (“The formula postulated in [*Teaff*] was adopted by courts throughout the country as the fixed pole in the development of the law of fixtures.”); *Roseville Pottery v. Bd. of Revision*, 77 N.E.2d 608, 611 (Ohio 1948) (“We have, fortunately, [*Teaff*], which is probably the landmark case on this subject. That case has been cited and followed, not only by this court but by courts all over the nation”); *Zangerle v. Standard Oil Co. of Ohio*, 60 N.E.2d 52, 58 (Ohio 1945) (*superseded by statute*) [hereinafter *Zangerle*]. In *Teaff*, the Supreme Court of Ohio found “motive-power equipment” to be a fixture in a manufactory

because it was “beneficial, if not necessary, to the use of the land . . . regardless of the nature of the business which may be located on such land.” *Zangerle*, 60 N.E.2d at 56.

The adaptation prong was voiced slightly differently by the *Holland* court years later as follows: “the chattel must have an appropriate application to the use or purpose to which the realty to which it is attached, is devoted.” *Holland*, 19 N.E.2d at 275.

The Plaintiff relies heavily on a number of cases arising in the tax context that involve a fixture analysis, which tend to emphasize the notion that to be adapted to the realty, an asset must be beneficial to the land rather than just the business that is conducted on the land. This differentiation between the land and the business being carried out on the land was explained in *Fortman v. Goepper*. There, the Supreme Court of Ohio stated:

The general principle to be kept in view . . . is the distinction between the business which is carried on in or upon the premises, and the premises . . . The former is personal in its nature, and articles that are merely accessory to the business, and have been put on the premises for this purpose, and not as accessions to the real estate, retain the personal character of the principal to which they appropriately belong and are subservient. But articles which have been annexed to the premises as accessory to it, whatever business may be carried on upon it, and not peculiarly for the benefit of a present business which may be of a temporary duration, become subservient to the realty and acquire and retain its legal character.

Fortman v. Goepper, 14 Ohio St. 558, 567–68 (1863). The *Zangerle* case elaborated further on the adaptation test posited in *Teaff* and *Fortman*. The case involved a tax dispute regarding the difference in tax rate between realty, including “improvements” made thereupon, and personal property. *See Zangerle*, 60 N.E.2d at 54–55. The Supreme Court of Ohio in *Zangerle* held that “[t]he decisive test of appropriation is whether the chattel under consideration in any case is devoted primarily to the business conducted on the premises, or whether it is devoted primarily to the use of the land upon which the business is conducted.” *See id.* at 57.

This formulation of the adaptation test has also been applied in other contexts. In *Masheter v. Boehm*, the Supreme Court of Ohio used general fixture analysis to determine whether assets were personal property or part of the realty in an appropriation proceeding. 307 N.E.2d 533, 538 (Ohio 1974) (discussing with approval the three-part fixture test set forth in the *Fortman* and *Zangerle* tax cases in an appropriation case). The adaptation test outlined in the tax fixture cases has also been applied in Ohio bankruptcy courts. See *Jarvis v. Wells Fargo Fin. (In re Jarvis)*, 310 B.R. 330 (Bankr. N.D. Ohio 2004). The *Jarvis* court used fixture analysis to determine “the validity and priority of certain liens.” *Id.* at 334. For the purposes of this

The parties agree that under the specific circumstances of this dispute, Defendants bear the burden of proof regarding whether an asset is a fixture. (JPTO at 4.) But, as noted above, with respect to the intent element, the “installation” of an asset “by the owner of the land raises a presumption under Michigan law that the accession was intended to be permanent.” *Johns-Manville Sales Corp.*, 88 F.2d at 521; *Cliff’s Ridge*, 123 B.R. at 759; *In re Mahon Indus. Corp.*, 20 B.R. at 839.

D. The Issue Whether, Under Ohio and Michigan law, in order to Satisfy the Adaptation Prong, the Asset in Question Benefits the Business or Realty

84

The Plaintiff suggests that the primary purpose of the buildings is simply to “provide shelter for the assets.” (Trial Tr. (Goesling) at 3268:15–19.) But a more accurate explanation need also convey that the purpose of the realty is to support the manufacturing assets and the specific production processes to be contained in the building. As part of the integrated process that runs throughout each of the facilities in question, each asset in a production line (including the Representative Assets) is designed to work with and depend upon every other asset in the

V. CONCLUSIONS OF LAW REGARDING PRELIMINARY ISSUES

1. *The Defendants' Contentions*

2. *The Plaintiff's Contentions*

87

at Powertrain Engineering Pontiac. The Plaintiff asserts that Powertrain Engineering Pontiac is not identified on Schedule 1 of the Collateral Agreement and is not “related” or “appurtenant” to MFD Pontiac and therefore is not covered by the Collateral Agreement. The Plaintiff asserts that MFD Pontiac and Powertrain Engineering Pontiac do not share any operational functions, are not physically connected, the work done at the facilities is not related, and the facilities have different addresses and are on opposite sides of the street. The Plaintiff argues that had the parties intended for the Term Loan Agreement to cover the fixtures located at Powertrain Engineering Pontiac, that facility would have been listed on Schedule 1 of the Collateral Agreement.

3. *Discussion*

Here, the Court finds that Powertrain Engineering Pontiac is not “related” or “appurtenant” to MFD Pontiac. The two facilities are involved with different operations entirely, with little to no overlap in functionality or purpose. MFD Pontiac is a stamping facility where body panels and motor components are stamped for use in New GM assembly plants. (Buttermore Direct ¶ 42; Trial Tr. (Buttermore) at 1311:15–17.) By contrast, Powertrain Engineering Pontiac is a research and development facility where New GM designs, engineers, develops, and tests engines and transmissions. (Buttermore Direct ¶ 42). Additionally, the engineering that takes place at Powertrain Engineering Pontiac is not specific to the manufacturing and production at MFD Pontiac. (Trial Tr. (Buttermore) at 1311:18–1312:7.) The facilities have no apparent relationship to one another and are thus not “related” within the meaning of the Collateral Agreement.

The Defendants advocate for a broad definition of the term “related,” but this definition must be rejected. To adopt such an expansive definition of relatedness would negate the purpose of listing facilities on the Schedule 1 of the Collateral Agreement, since all facilities would be

Powertrain Engineering Pontiac is not “related” or “appurtenant” to MFD Pontiac and is therefore not covered by the Collateral Agreement. Any fixtures located at Powertrain Engineering Pontiac are not subject to the Lenders’ security interest.

The Defendants argue that the Plaintiff is time bared from contesting the validity of the LDT fixture filing because the Plaintiff did not assert this claim for relief in the Original Complaint or Amended Complaint. The Defendants contend that the Plaintiff, in its complaints, only took affirmative steps to challenge liens granted under the Collateral Agreement to the

extent they were perfected solely by the UCC-1 filed in Delaware, but neither complaint raised any issue with respect to perfection of any lien on fixtures by any fixture filing, including any defect in the LDT fixture filing. The Defendants allege that paragraph 601 of the Amended Complaint does not address challenging the perfection of any fixture filings, including those at LDT, and that this paragraph only challenges the *value* of the surviving collateral. (Am. Compl. ¶ 601.) As such, the Defendants maintain that, under the Collateral Agreement, they hold security interests on the fixtures located at LDT, whether or not they were properly perfected by a fixture filing or otherwise, and that because the statute of limitation has passed for commencing a separate adversary proceeding to challenge the priority of the LDT fixture lien, the Plaintiff is time barred from doing so.

2. *The Plaintiff's Contentions*

The Plaintiff argues that it may assert that the assets at the LDT facility are not subject to a fixture filing because this claim was properly raised in paragraph 601 of the Amended Complaint. The Plaintiff contends that paragraphs 590 to 603 of the Amended Complaint amount to an assertion that, due to the termination of the umbrella UCC-1, the Defendants did not perfect their first priority lien, and that they were entitled to be paid only to the extent of the value of any surviving collateral Defendants can demonstrate a perfected first priority security interest. (Am. Compl. ¶¶ 590–603.) The Plaintiff agrees that the Collateral Agreement provides the Lenders with a security interest in all fixtures at LDT; the issue is whether that security interest was properly perfected, and what are the consequences now if the security interest was not properly perfected. The Plaintiff admits the validity of the LDT fixture filing and that the Defendants have a perfected security interest in any fixtures located on the vacant lot described in Exhibit A to the fixture filing. The Plaintiff argues that since it “has not sought to use its avoidance powers under § 544(a) . . . a separate adversary proceeding was not required.”

(Plaintiff's Post-trial Brief at 359 n.24, ECF Doc. # 994.) Instead, the Plaintiff asserts that the fixtures at LDT are not "Surviving Collateral" and the Defendants do not have a security interest in those assets because the Amended Complaint properly plead that the Plaintiff intended to challenge the priority of the LDT fixture liens at trial.

3. *Legal Standard*

a) Section 544

Section 544 of the Code gives the trustee in bankruptcy the status of a judgment lien creditor, allowing him to "avoid any transfer of property of the debtor or any obligation incurred by the debtor that is voidable by . . . a creditor that extends credit to the debtor at the time of the commencement of the case, and that obtains . . . a judicial lien on all property on which a creditor on a simple contract could have obtained such a lien" 11 U.S.C. § 544(a)(1). In other words, section 544(a) allows a trustee to avoid an unperfected security interest in a debtor's assets; a lien on collateral may be avoided if it was not perfected on the petition date. *Id.*; see also *Musso v. Ostashko*, 468 F.3d 99, 104 (2d Cir. 2006) ("The trustee hypothetically extends credit to the debtor at the time of filing and, at that moment, obtains a judicial lien on all property in which the debtor has any interest that could be reached by a creditor."). If this "hypothetical unsecured creditor could have obtained [at the time of filing] a judicial lien superior to the interest of the party bringing a secured claim in the bankruptcy proceeding, the estate can avoid the interest." 5 COLLIER ON BANKRUPTCY ¶ 544.03 (16th ed. 2017) (citation and internal quotation marks omitted). This means that security interests that are avoided lose their priority over unsecured claims and junior secured claims. An action under section 544 may not be commenced after the earlier of the later of two years after the entry of the order for relief or the time the case is closed. 11 U.S.C § 546(a).

Plaintiff has asserted that the assets at LDT were not part of the surviving collateral after the UCC-1 was held to be terminated. In its post-trial brief, the Plaintiff wrote that “all assets located at the Lansing Delta Township Assembly and Lansing Regional Stamping facilities are not Surviving Collateral because they are not covered by a fixture filing.” (Plaintiff’s Post-trial Brief at 338.) This statement is disingenuous: Plaintiff’s counsel agreed during closing arguments that the assets at LDT were “subject to a grant of a security interest under the collateral agreement.” (Trial Tr. at 3588:2–5.) The termination of the UCC-1 Statement did not remove the collateral from the Collateral Agreement—it only terminated the perfection of the security interests. *See* UCC Financing Statement Amendment (Form UCC3), *available at* <https://www.iaca.org/wp-content/uploads/UCC3FinancingStatementAmendment-2.pdf> (“2. TERMINATION: Effectiveness of the Financing Statement identified above is terminated with respect to the security interest(s) of the Secured Party authorizing this Termination Statement.”). Accordingly, the Court finds that the Defendants did have a security interest in fixtures, including those at LDT. The inquiry now turns to whether the Plaintiff properly challenged the priority of the security interests of those fixtures.

b) Plaintiff was Required to Challenge the Priority of the LDT
Fixtures in an Adversary Proceeding Under Rule 7001(2)

Challenges to the priority of a security interest must be brought in an adversary proceeding as required by Rule 7001(2). The Final DIP Order established a June 29, 2009 deadline to file adversary proceedings challenging the priority of any liens. (DX-10 (Final DIP Order ¶ 19(d)) at 25–26.) This order required the Plaintiff to file an adversary proceeding by that date in order to challenge the priority of any liens under section 544 at any time throughout the case. If the Plaintiff sought to challenge the priority of a lien in a separate adversary proceeding after the June deadline, that adversary proceeding must have been filed by June 29, 2011, two years after the order for relief was entered. 11 U.S.C § 546(a).

Here, the present adversary proceeding, initiated by the filing of the Original Complaint and later the Amended Complaint, is the only proceeding commenced by the Plaintiff. To satisfy Rule 7001(2), the Amended Complaint must properly challenge the priority of the fixture liens. Throughout its briefs, the Plaintiff dodges the priority issue, simply stating that “a separate adversary proceeding was not required” to challenge the LDT fixture filing. But Rule 7001(2) plainly states that challenges to the “priority” of a lien must be part of an adversary proceeding, and Plaintiff failed to do so. Plaintiff seeks to avoid Defendants’ security interest in the LDT fixtures, but has failed to properly challenge the validity, perfection, or priority of the lien on the property described in the filing.

c) The Amended Complaint Does Not Satisfy the Pleading
Requirement of Rule 8 to Allow the Plaintiff to Challenge the
Priority of the LDT Fixture Lien

The only paragraph of relevance in the Amended Complaint on this issue is paragraph 601. Indeed, Plaintiff admitted at closing arguments that paragraph 601 in the Amended Complaint is the only paragraph it was relying on in arguing that it had timely challenged the

VI. GUIDING PRINCIPLES IN FIXTURE DETERMINATIONS

The legal principles in Michigan and Ohio relating to the determination whether an asset is a fixture are born out in the case law referenced above. But to assist the parties in utilizing this Opinion to facilitate settlement negotiations surrounding the many remaining disputed assets, the Court will set forth several guiding principles that may be distilled from the rulings on the Representative Assets.

A. Concrete Pits, Trenches, Slabs, or Specialized Foundations are Strong Indications that an Asset is a Fixture

As noted above, courts infer intent from “the manner of annexation.” *Wayne Cty.*, 563 N.W.2d at 680. With respect to the Representative Assets, the assets themselves are affixed in a variety of ways, ranging from an assets weight alone, such as with the Helical Broach and some of the other machining assets, to bolts fixing an asset in place, such as with the conveyor

description and street address of a vacant parcel of land *across the road* from the Lansing Facilities. Nevertheless, Defendants argue that the Eaton County Fixture Filing was enough to put a potential buyer or lender on “constructive notice” of the lien recorded against the fixtures at LDT, thereby perfecting the Term Lenders’ security interest in the fixtures. Plaintiff counters that since the Eaton County Fixture Filing did not cover the Lansing Facilities, it did not provide constructive notice.

Plaintiff argues that the Eaton County Fixture Filing unambiguously fails to cover the Lansing Facilities, and therefore does not provide constructive notice. (*See* Plaintiff’s Post-Trial Brief at 348–49.) Plaintiff emphasizes that both the street address and metes-and-bounds descriptions of the real property in the Eaton County Fixture Filing do not cover any part of the Lansing Facilities. (*Id.*) Plaintiff further argues that even under an “inquiry notice” standard, there is no evidence that a potential purchaser would have learned of Defendants’ lien. (*Id.* at 350.)

The Court heard testimony from Defendants’ expert James M. Marquardt, an experienced real-estate title searcher, who testified that the LDT fixture filing would have been located in a search for the official land records at the Eaton County register of Deeds, and relevant details of the lien would also have been communicated between a prospective buyer or lender and the property owner. (*See* Defendants’ Post-trial Brief at 323.) Mr. Marquardt testified that a diligent title searcher would have encountered multiple ambiguities in a title search related to the Eaton County Fixture Filing, prompting him to conduct additional inquiries into the property, which would have resulted in the discovery of the Lansing Facilities, and sufficient notice. (*Id.* at 328–29.)

Because the Court finds that Plaintiff did not properly assert a timely claim challenging the priority of the liens on the fixtures at LDT, and that the statute of limitations passed before a challenge to the priority of the LDT fixture lien was raised in this (or a separate) adversary complaint, the Court need not resolve the issue whether the Eaton County Fixture Filing was sufficient to provide constructive notice. Defendants’ security interest in the fixtures at LDT may not be challenged, and the issue whether the interest was properly perfected is of no moment.

systems, to concrete pits, foundations, or slabs that were constructed specifically to house an asset, such as with the presses and certain other assets.

Courts have consistently held that the use of concrete is strong evidence of attachment, but is also particularly indicative of the intent for an asset to become a permanent accession to the realty. For example, the Michigan Court of Appeals considered that greenhouses, held to be fixtures, were installed with “numerous stubs in cement-filled holes.” *Tuinier*, 599 N.W.2d at 120. The court found this to be “objective evidence that petitioner intended to erect a permanent structure,” and further, that “petitioner’s construction of the concrete sidewalk is also evidence of an intent to make the structure permanent.” *Id.* at 120–21.

Similarly, the District Court in the Eastern District of Michigan, in analyzing whether a large milling machine was a fixture, found it pertinent that the “foundation of the machine [was] poured concrete which is part of the floor in the . . . facility,” and that “[t]he machine [was] anchored and bolted into the cement foundation at 38 different locations.” *Cincinnati Ins.*, 166 F. Supp. 2d at 1180.

Likewise, the presence of a “concrete slab foundation” provided the court in *Ottaco* with a sufficient basis for finding that a mobile home was annexed to the realty. *Ottaco, Inc. v. Gauze*, 574 N.W.2d 393, 396 (Mich. Ct. App. 1997). The concrete slab foundation in that case appears to resemble the concrete slabs beneath the Paint Room Electrical System, and many of the assets within the CUC.

And in *Michigan National Bank* the court held that a bank “inten[ded] to permanently affix” drive-up teller equipment because it had been “physically integrated” with other assets and the realty itself, notably, because certain assets were “cemented into place.” 293 N.W.2d at 627–28 (“Once installed, they [were] integrated with and become part of the wall in which they are

mounted.”). The use of concrete to physically integrate an asset with both the realty and other assets can be seen in LDT’s stamping operations with the presses. The presses are incorporated into the realty by way of the concrete pits dug into the earth that house the presses, and also integrated with other assets by virtue of the many front-of-line and end-of-line components, and other assets located in the pits and surrounding areas all working together with the presses. The concept of integration, and the *Michigan National Bank* case in particular, highlights the importance of concrete in the fixture determination, but also the relationship between assets and the realty, as well as the relationship between the assets themselves. The latter concept is discussed further below.

Because the presence of concrete weighs heavily in both the annexation and intent prongs of the fixture test, the Court finds it exceptionally useful in its determinations with respect to the Representative Assets to look to the presence of concrete pits, trenches, slabs, or specialized foundations as a strong indication that an asset is a fixture.

B. An Asset’s Integration With Other Assets and the Assembly Process

The Representative Assets conduct a wide variety of functions along the manufacturing process, and some assets are highly integrated with other assets along the assembly process. For example, the Aluminum Machining System operates in conjunction with sixty-one other assets, including sixty CNCs. Likewise each of the conveyors is unequivocally integrated and incorporated into the assembly and manufacturing process, and specifically integrated with other manufacturing assets by virtue of the fact that each of the conveyors must be connected, either physically or geographically, to other assets that perform essential functions along the manufacturing process. And importantly, many of these highly integrated assets actually interact with a product being manufactured as it moves through the assembly line.

Id. at 627–28. The court emphasized the level of integration of the assets into the land, but this analysis also highlights the importance of how the assets themselves fit together. In the case of the drive-up teller structure, the roof-type canopy covers the customer unit, which is mounted to a special concrete island where pneumatic tubing connects the customer unit with the bank itself. *Id.* These assets interlocked together in a specific way that demonstrated a high level of integration, particularly where some of the assets were affixed with concrete, or otherwise physically integrated into the land. Naturally, this demonstrates an intent that each individual asset remain in place as permanently affixed to the realty, allowing the realty to function for its intended purpose.

When a particular asset is closely integrated, assimilated, or interlocked with other assets, the notion that the asset was intended to remain in place is reinforced. On the other hand, where an asset stands apart from other assets and the assembly line processes generally, and has a lower level of integration and assimilation, there is less of an apparent intent for an asset to remain in place indefinitely. A low-integration asset can be more easily moved without disruption of the assembly process.

C. Where There is a Deficiency in Objective Evidence Regarding Assets That are No Longer In Place, Proving that an Asset is a Fixture Will Be Difficult

“This Court examines the objective visible facts to determine whether intention to make the article a permanent accession to the realty exists.” *Wayne Cty.*, 563 N.W.2d at 680 (citation omitted). So where objective evidence is lacking, it becomes increasingly difficult to find that an asset is a fixture, particularly given that the burden of proof rests on the party asserting that an asset is a fixture. Though a court may “infer” the intention of the party installing an asset from things like “nature, mode of attachment, [and] purpose for which used,” “[a]ny doubt must be

resolved in favor of finding the item personal property.” *Gen. Elec. Co.*, 2001 WL 1647158, at *3.

As such, where there is a deficiency in objective evidence relating to an asset, for example, where an asset has been removed, as was the case with the components of the Courtyard Enclosure, meeting the burden of proof will be particularly difficult.

D. Preliminary Discussion

1. There is a Presumption of GM’s Intent for Permanence

As noted above, the “installation” of an asset “by the owner of the land raises a presumption under Michigan law that the accession was intended to be permanent.” *In re Johns-Manville Sales Corp.*, 88 F.2d at 521; *Cliff’s Ridge*, 123 B.R. at 759; *Mahon Indus.*, 20 B.R. at 839. The Michigan Supreme Court has squarely recognized this presumption. *See, e.g., Tyler v. Hayward*, 209 N.W. at 802 (holding that gasoline pump and scales annexed by owner of realty used as store and dwelling were fixtures; “[w]here the owner annexes them the presumption follows that he intended they should become realty”).

During trial, the Avoidance Trust stipulated that “all buildings and all lands where each of the 40 Representative Assets were located were owned by Old GM at all relevant dates for this proceeding.” Colleen Charles — the former executive director of GM’s global financial shared serviced organization, with responsibility for GM’s electronic fixed asset ledger, eFAST — credibly testified that GM’s eFAST ledger establishes that Old GM likewise owned the 40 Representative Assets or, for leased assets, that Old GM owned whatever rights or interests General Motors has in those assets. (Trial Tr. (Charles) at 1568:14–24, 1599:15–1605:6; Charles Direct ¶ 18 & Ex. 7.)

Accordingly, because GM owned the land and buildings on which the Representative Assets were installed, for the assets located in Michigan where the presumption of an intent of

Additionally, as is the case with Goesling’s movement analysis, Goesling tended to state that certain assets were similar when often times they were not, and Goesling’s figures represented line items, and not necessarily actual assets. This rendered Goesling’s data unreliable.

And surely the existence of a secondary market alone is not enough to overcome the presumption that the owner of property that installs an asset is presumed to intend the asset to remain in place permanently.

VII. CONCLUSIONS OF LAW REGARDING THE 40 REPRESENTATIVE ASSETS

A. The Presses

1. The Leased Presses Are Not Fixtures

The AA Transfer Press and the B3-5 Transfer Press (together, the “Leased Presses”) are leased, not owned, by GM and the Defendants concede that they therefore hold no security interest in them. (JPTO ¶ 66.) In both leases, Old GM agreed that the Leased Presses would “retain the character of personal property” and “shall not become part of any real property.” (PX-220 at 38; PX-283 at 41.) Nevertheless, the Defendants argue that the Leased Presses are fixtures, no doubt because there are numerous similar presses among the 200,000 remaining assets still to be resolved. The Defendants argue that because the Leased Presses were installed before the leases were entered into, the leases—in which GM agreed that the Leased Presses would remain personal property—have no bearing on GM’s intent at the time of installation. The Court disagrees.

The B3-5 Transfer Press was put into service in December 2003—the same month that the sale/leaseback provision was entered into. (PX-220 at 38 (dated December 10, 2003).) The AA Transfer Press was put into service in September 2003 and the sale/leaseback provision was entered into under three months later, also in December 2003. (PX-283 at 41 (dated December 23, 2003).) Miller testified that “the planning for installation of a press . . . begins several years before the in-service dates.” (Miller Direct ¶ 68.) It is hard for the Court to believe that a sophisticated financial agreement such as the sale/leaseback agreements would not also be negotiated and drafted during that same timeframe. In the context of a years-long installation process, the Court finds that the execution of the sale/leaseback agreement within days or even a few months of the press’s installation is a strong indicator of GM’s intent at the time of installation. The Court can think of few more “objective, visible” indicators of intent than a

2. The Remaining Three Presses are Fixtures

The adaptation prong of the three-part test has clearly been met for all three presses. All of the presses were installed in 16- to 20-foot pits excavated in the concrete foundations of the plants in which they were located—part of an installation process that took years to plan and execute. (Miller Direct ¶ 68.) Special concrete pillars supporting the presses were anchored to the bedrock beneath the plants. All of the presses were served by hard utility and piping connections integrated with the rest of the facilities, along with supporting assets such as overhead cranes and underground conveyors. (*Id.* ¶¶ 109, 125, 138.)

108

tons and stood three stories tall, while the GG-1 Transfer Press weighed over 1,100 tons and stood three stories tall. (*Id.* ¶¶ 85, 103, 133.) It took years to plan their installation and create the custom foundations necessary to run the presses, and would take months to remove them. (*See* JPTO ¶¶ 103–04 (TP-14 Transfer Press and Danly Press both took at least three months to remove).) Removal of a press would leave behind its 16- to 20-foot foundation pit. (*See, e.g.,* Miller Direct ¶ 110 (describing “the large pit that would be left behind” if the Danly Press were removed).) It is unreasonable to suggest, as Goesling does, that such pits are not “damage” to the realty: the facility cannot be repurposed until the pit is filled in and a new foundation is poured. (*See id.* (noting that the floor would need to be “healed” before the area could be used).)

The Court has considered the Plaintiff’s arguments regarding the Danly Press, and comes to the same conclusion as the other non-leased presses. The Danly Press was originally put into service in October 1980 at the GM Indianapolis stamping plant, was idled in place 23 years later when the press line was taken out of production because of a design change, and was moved to LDT in 2003. (JPTO ¶ 104; Miller Direct ¶¶ 112–13; Trial Tr. (Miller) at 1127:13–28:22.) The combination of the idling of the press line at the GM Indianapolis plant, and the opening of the LDT plant, created an “extraordinary situation” in which the rare movement of a press made economic sense. (Miller Direct ¶ 114.) It took three to six months to remove the Danly Press from the GM Indianapolis plant and prepare it for shipment, and after it was removed GM needed to repair the damage to the facility’s floor. (Trial Tr. (Miller) at 1128:23–30:7.) GM then excavated a pit for the Danly Press into the floor at LDT. (*Id.* at 1130:24–31:12.) The cost, time, and effort to move the Danly Press and reinstall it at LDT weigh in favor of GM’s intent for permanence, not against. The Court is also convinced that the Danly Press is an integral part of the production line at LDT. The Danly Press is a “tryout press,” used to validate large dies for

assemble them entirely prior to delivery in GM's plant; they are simply too large to be transported by road or rail to GM's facilities. (Stevens Direct ¶ 132.) It would be wholly impossible to deliver such a conveyor system already intact, and the modular nature of the conveyors is necessary for installation, and says very little, if anything, about the intent of GM regarding the permanence of the conveyor assets.

2. *The Conveyors are Attached to the Realty*

The parties agree that the Skid Conveyor (Representative Asset No. 16), the P&F Conveyor (Representative Asset No. 17), the Paint Dip Conveyor (Representative Asset No. 6) the Wheel & Tire Delivery Conveyor (Representative Asset No. 20), the Skillet Conveyor System (Representative Asset No. 21), the Core Delivery Conveyor (Representative Asset No. 26), the Power Zone Roller Conveyor (Representative Asset No. 3), the Button Up and Test Conveyor (Representative Asset No. 35) are all attached to the realty. (Goesling Direct, Ex. A at 344.)

The Plaintiff maintains that the Vertical Adjusting Carriers (Representative Asset No. 18) at the Lansing Facilities is not attached to the realty as the carriers themselves are not permanently affixed to the building, but instead ride along the top of a rail and are connected to it by gravity. (Trial Tr. (Stevens) at 165:18–167:23; Goesling Direct ¶ 115.) The rail for the Vertical Adjusting Carriers is attached to white steel beams within the facility that is in turn bolted to the building. (Trial Tr. (Stevens) at 165:18–167:23; Goesling Direct ¶ 118.)

But even “slight” physical attachment can suffice. *Wayne Cty.*, 563 N.W.2d at 678; *see also, e.g., In re Joseph*, 450 B.R. at 692 (mailbox hanging on two screws was attached to house). Assets can be constructively attached even if not directly attached to the realty if they are “part of, or accessory to, articles which are so annexed.” *Wayne Cty.*, 563 N.W.2d at 680 (citation

omitted). Put another way, assets are deemed “constructively annexed” if “their removal from the realty would impair both their value and the value of the realty.” *Id.* at 679.

The Vertical Adjusting Carriers are constructively attached because they are plainly “part of” the vertical adjusting carrier system, which includes the rails on which the carriers rest, and the removal of the carriers would completely halt the flow of production in the assembly plant.

Accordingly, each of the conveyor systems is attached to the realty.

3. *The Conveyors are Highly Integrated into the Assembly Process*

Naturally, given that these conveyor systems move parts and components along the production line and throughout a facility, driving the production process forward, these systems are highly integrated into the production process with many other assets. And to be sure, production would cease altogether if any of the conveyor assets were removed from the facility. For example, Mr. Stevens repeatedly oversaw the work of teams who had to specially design equipment layout and conveyors to fit within a particular space or column configuration (or had to specially design a particular space to fit the equipment and conveyors). (Stevens Direct ¶ 39.) Many conveyors must run for thousands of feet to allow multiple repeated operations to be performed in a complex, highly choreographed assembly process. (*Id.*) And the layout of the conveyors for the 6-speed transmission line at Warren Transmission was customized specifically for the tight layout of the renovated Warren building. (Trial Tr. (Deeds) at 732:23–733:7; Deeds Direct ¶¶ 45, 60, 178.) The conveyor assets therefore demonstrate an exceptionally high level of integration and interconnection with other manufacturing assets.

Courts have held that assets somewhat similar to the conveyor systems at issue here are fixtures. The Bankruptcy Court in the Western District of Michigan held that a chairlift on a ski hill was a fixture when the chairlift was attached to the realty by concrete and bolts and specially engineered to the use of the realty. *See Cliff’s Ridge*, 123 B.R. at 759–60. Like a conveyor belt,

a chair lift is a mechanical system operating on a straight or tilted plane, with the essential purpose of moving physical objects.

The *Cliff's Ridge* court determined that the chairlift fulfilled the first element of the test, because “[t]he chairlift was attached to the realty. Concrete pads were poured in the realty prior to the erection of the chairlift. Towers were then bolted to the concrete pads, cables were strung, and about 100 chairs were attached to the cables.” *Id.* at 759. The court also held that the second element of the fixture test was fulfilled, noting that “the chairlift was engineered to be erected on the realty and the chairlift was specially modified to be attached to the realty.” *Id.* (“The court finds the chairlift was adapted to the ski hill real property for its use and purposes.”) (internal citation omitted). The *Cliff's Ridge* court determined that the third element was fulfilled because “[i]n two financing statements dated December 14 and December 15, 1982, filed by First National, it is stated, ‘The goods are to become fixtures on 11–24–82.’” *Cliff's Ridge*, 123 B.R. at 759. The court further noted that, “[u]nder Michigan law, attachments to realty to facilitate its use become part of the realty and, if done by the owner, are presumed to be permanent.” *Id.* (citation omitted).

Regarding the adaptation element, like the chairlift in *Cliff's Ridge*, GM's conveyors in Michigan were designed and engineered for the realty on which they were installed. *See Cliff's Ridge*, 123 B.R. at 756 (noting that “[t]he chairlift was specially engineered and modified for a slope on the ski hill real property.”). As noted above, these conveyors wind and curve throughout the assets of the facilities in which they reside, and are absolutely critical to the integrated manufacturing processes. For example, defense expert Deeds testified that Asset No. 3 “is a critical component of the transmission housing line at Warren Transmission,” and “[Asset No. 3's] layout was driven by the specific dimensions of the machining area at the Warren

Transmission facility, with a custom layout.” (Deeds Direct ¶¶ 55, 60.) Deeds also testified that Asset No. 35 “is a necessary, customized component of the final assembly line for completed transmissions . . . and was also specifically designed for the layout of Warren Transmission’s assembly area,” with a glass wall built around the Asset “to separate the assembly building process from the shipping dock.” (*Id.* ¶ 178.) Defense expert Steven Topping testified that Asset No. 6 “is a necessary part of the ELPO Process, which is a critical step in the paint-shop process,” and that “the facility was clearly customized to support this Conveyor.” (Topping Direct ¶ 47.) This in particular emphasizes the nature in which the realty and asset are integrated and adapted.

This goes to demonstrate that each of the conveyors are essential to driving the production process forward, and are “a necessary or at least a useful adjunct to the realty, considering the purposes to which the latter is devoted.” *Wayne Cty.*, 563 N.W.2d at 680. The adaptation element for each of the conveyors is therefore satisfied.

And because of the extremely high level of integration that the conveyor systems have with other assets and the realty itself, as well as the high level of attachment that most of these conveyors have with the realty (in some cases, by thousands of bolts), there is strong evidence that GM intended these conveyors to remain in place for their useful lives such that the production process would continue. The presumption that GM intended for the conveyors to remain in place permanently has not been overcome.

Accordingly, the Court finds that each of the conveyor assets are fixtures.

C. The Robots

The robots present unique challenges for the Court. The robots are much smaller than the presses and machining assets. They are also relatively easy to remove (Trial Tr. (Thomas) at 837:7–838:17), and there is a robust secondary market for these types of robots. (*See Sofikitis*

Accordingly, because all three prongs of the fixture test are met for the CB 91 Robot and the body shop robot, the Court concludes that they are fixtures.

2. *Representative Asset No. 22*

The Fanuc M-710IB/70T Robot at Warren Transmission is a Fanuc robot mounted on a gantry rail. The asset is used to move gears within a subassembly process before the finished gears are sent to the transmission assembly line.

The parties agree that this asset is attached to the realty (Goesling Direct, Ex. A at 344): the Gantry's metal structure to which the robot is attached is supported by three freestanding steel tube columns, each with a floor-mounting plate that is attached to the floor with lag bolts. (Goesling Direct ¶ 280.) The three columns support the approximately 50-foot-long horizontal Gantry rail using right angle brackets and various Allen bolts. (*Id.*; *see also* JX-1309.)

Though the Gantry is encased in safety fencing and interlocks, the Gantry has an extremely high level of connectivity and integration with the other assets in the transfer gear machining area. The gantry rail itself enables the attached Gantry robot to: (a) pick up transmission gears from a specifically located unfinished heat-treated gear delivery area; (b) transport each gear to the start of the powered conveyor that will take the gear through Warren Transmission's automated finish gear grinding process; and (c) transport each finished gear back into a separate pallet storage area, where it will be stored before being delivered to the final assembly line. (Deeds Direct ¶ 93; Trial Tr. (Deeds) at 522:10-524:10; DX1009 (video of nearly identical gantry robot); Trial Tr. (Deeds) 519:5-23 (testimony about DX1009).) The transmission gear finishing cell includes one gear press, three CNC grinders, one washer, and one hardness check quality control station. (Deeds Direct ¶ 93.) Without the Gantry, this cell of assets, all located specifically to interact with one another, would be rendered useless. The Gantry, sitting in this amalgamation of other assets performing its essential function, is clearly

vehicle bodies off the assembly line. (Goesling Direct ¶ 168.) This renders the determination on the CMM a closer call.

But under the three-part fixture test, the annexation and intent elements are met, given the permanence of the assets attachment, together with the presumption that, as the realty's owner, GM intended for the asset to remain a permanent accession to the realty.

Moreover, the asset was "adapted" to LDT facility because it was used by GM "in the regular course of its business" manufacturing automobiles, and the asset was designed, installed, and used to that end. *Cincinnati Ins.*, 166 F. Supp. 2d at 1180.

Because it satisfies the three-part fixture test, the Court finds that Representative Asset No. 19 is a fixture.

E. The Warren Transmission Assets

1. Representative Asset No. 14

The Leak Test Machine at Warren Transmission tests for fluid leaks in transmission housings after they have been manufactured and before they are sent to the transmission assembly line.

The parties agree that the attachment prong is satisfied. The asset is bolted to the floor, and connected to a compressed air distribution system and high-voltage power supply.

Regarding adaptation, the Leak Test Machine was custom-designed to test leaks on a 6-speed housing at Warren Transmission. (Deeds Direct ¶ 75.) Moreover, the facility was adapted to accommodate the Leak Test Machine: high-voltage power, compressed air, task lighting, and communication lines were routed through the building to serve this asset, and numerous other utilities were routed to the specific locations of other assets that make up the integrated transmission housing line of which the Leak Test Machine is a critical part. (Deeds Direct ¶ 75 & Ex. A at 22.) The Leak Test Machine was customized to its place in the specific layout at

Because it satisfies the three-part fixture test, the Court finds that Representative Asset No. 14 is a fixture.

The Base Shaping Machine at Warren Transmission is a CNC machine that is part of the process of machining or cutting steel blanks into transfer gears that are used in GM transmissions.

122

electrical supply transformer and electrical control cabinets, all of which are bolted to the floor in turn. Accordingly, the attachment prong is satisfied.

Regarding the adaptation element, the entire purpose of the Warren Transmission facility—its *raison d’être*—is to produce transmissions for use in GM cars, and the Base Shaping Machine is most certainly “a necessary or at least a useful adjunct to the realty, considering the purposes to which the latter is devoted.” *Wayne Cty*, 563 N.W.2d at 680 (citation omitted). The asset is plainly integral to the integrated assembly and production process that takes place at the facility. This adaptation element is therefore met.

And because “[i]ntent may be inferred from the nature of the article affixed, the purpose for which it was affixed, and the manner of annexation,” *id.* at 680, with the Base Shaping Machine, GM’s intent to make the asset a permanent accession to the realty is apparent, in part, given that the purpose of this asset is absolutely essential to creating the gears used in GM transmissions. The asset is also highly integrated into the assembly process and the assets surrounding it. For example, conveyors loading and unloading parts are bolted to the Base Shaping Machine. (JX-1353; Goesling Direct ¶ 297.) As such, removing the asset would not only involve lifting the colossal weight of the asset, but also unbolting the conveyors that are attached to it. With respect to the intent element, the Trust has failed to rebut the presumption that GM, as the owner of the realty, intended for this asset to remain in place permanently.

Because all three prongs of the fixture test are met, the Court finds that Representative Asset No. 24 is a fixture.

3. *Representative Asset No. 25*

The Liebherr Hobb Machine at Warren Transmission is part of the process of machining or cutting steel blanks into transmission gears that are used in GM transmissions. The asset has a

number of similarities to the Base Shaping Machine, as both are used to manufacture gears in the transfer gear area of the 6-speed line at Warren Transmission.

As with the Base Shaping Machine, the Liebherr Hobb is attached by its great weight (33,000 pounds) and size, and is connected via hard piping to the building's utility systems.

Regarding adaptation, similar to how the Base Shaping Machine was an integral component of the Warren Transmission facility, so too is the Liebherr Hobb, also performing essential functions that allow Warren to operate as intended.

Again, as with the Base Shaping Machine, the Trust has failed to rebut the presumption of intent (this asset was owned by GM and installed by GM in a building owned by GM on land owned by GM) as it is essential to creating the gears used in GM transmissions, and is highly integrated into the assembly process and the assets surrounding it, attached through extensive connections to plant utility systems, and would have been extremely expensive to install and remove.

Because all three prongs of the fixture test are met, the Court finds that Representative Asset No. 25 is a fixture.

4. Representative Asset No. 36

The Helical Broaching Equipment is a type of CNC machine used to cut gear teeth on a steel gear blank for use in GM transmissions.

The Helical Broach weighs roughly 90,000 pounds, and is mounted on four heavy duty isolation pads, which are bolted to the machine base and rest in a drip pan that is sitting on the building floor. (JX-1541; Goesling Direct ¶ 302; Trial Tr. (Deeds) at 629:4–631:10.) Three six foot high self-supporting operator platforms are attached to the Helical Broach with bolts. (Goesling Direct ¶ 302.) These facts demonstrate that the asset is attached to the realty, both actually and constructively.

Because all three elements of the fixture test are satisfied, the Court finds that the Helical Broach is a fixture.

The Aluminum Machining System at Warren Transmission is a machining system that is connected to CNC machines. The asset includes the piping that circulates clean, temperature controlled coolant to the CNC machines and also removes metal chips generated during the CNC milling process from the coolant so the coolant can be recirculated to the CNC machining centers.

The System is attached to the realty by virtue of the fact that it weighs 800,000 pounds, and is 75 feet long, 60 feet wide, and 25 feet tall. The standard for constructive attachment is plainly met, and indeed, the parties agree the asset is attached to the realty.

The machine operates in conjunction with 61 other assets, including 60 CNCs, and is therefore highly integrated into the manufacturing process at Warren, and absolutely critical to the 6-speed line. (Deeds Direct ¶ 82; JX-1330; JX-1331; JX-1345.) The Warren Transmission realty is also adapted to the System, with a reinforced twelve-inch floor and sixteen-inch-wide by twelve-inch-deep trenches built into the floor to capture any spills. Accordingly, the adaptation element is met.

Plaintiff agrees with Defendants that the pits, trenches, and the piping that are components of Representative Asset No. 23 are fixtures. These portions of the asset were installed permanently. (Goesling Direct ¶ 291.) The trenches, which are integrated into the floor slab, would be destroyed as part of removal and would leave extensive unlined holes, constituting damage to the building. (*Id.*) And the fact that the asset was installed on these trenches also indicates that the asset as well was intended to remain permanently. The assets high level of integration with both the realty and surrounding assets further evidence GM's intent for this asset to become a permanent accession to the realty. But perhaps more fundamentally, this assets gargantuan size provides a sufficient basis to determine that GM intended it to remain in place permanently. *Cincinnati Ins.*, 166 F. Supp. 2d at 1180 (inferring "intent to make permanent" from "the fact that the machine weighs approximately 200 tons").

All three prongs of the fixture test are met for the Aluminum Machining System, and the Court finds that it is therefore a fixture.

involved in GM's manufacturing process, is that the assets work closely with one another in a highly integrated fashion.

For example, Defendants' paint shop expert Steve Topping testified at trial regarding the assets in the paint shop, and how they work together to conduct their operations. Topping testified that a paint shop is a complex, enormous, highly integrated operation that requires hundreds of specialized machines to work together with great precision. (Topping Direct ¶¶ 31, 37; Trial Tr. (Topping) at 888:17–891:20.) At LDT, the paint shop is a \$450 million facility made up of over a mile of conveyance systems that traverse three floors of the building. (Topping Direct ¶ 31.) At trial, Topping testified that upon seeing the paint shop during his visit to LDT, he believed it to be “beautiful.” (Trial Tr. (Topping) at 886:24–887:2.) Topping remarked that he “thought she was the purest expression of engineering and the policies and procedures, best practices.” (*Id.* at 887:7–9.)

Topping also emphasized how the construction of the paint shop and the installation of the paint shop assets was meticulously planned and executed. Topping agreed that “installation of some of [the] larger equipment begin[s] before the walls are even complete in the paint shop building.” (*Id.* at 886:6–9.) At LDT, for example, the paint shop was constructed around the massive conveyors, paint booths, and paint ovens that operate there. (Topping Direct ¶ 39.) This is in part because of the nature of the paint shop assets. Huge paint and oven systems often span three stories, lengthy conveyors cut through floors and ceilings to carry vehicle bodies through paint lines, and heavily integrated paint booths (that are themselves very large) are dependent upon embedded waste processing systems. (*Id.* ¶ 37.) To ensure this elaborate, synchronized process works correctly, auto manufacturers design and determine how paint-shop assets will be

1. *Representative Asset No. 5*

The parties agree that the asset is attached to the realty by means of its concrete foundation. With respect to the adaptation element, the custom-built concrete 4-inch raised foundation also is strong evidence that the real property and the asset are adapted to accommodate each other. GM constructed concrete pads to protect the asset from potential floods or spills, routed electrical conduit through the concrete to serve the asset, built a cinder block wall between the Paint Circulation Electrical System and the paint mix room. (Topping Direct ¶¶ 64, 67.) Moreover, the removal of this asset would essentially shut down all operations at the paint shop, thereby halting LDT's production process, which the property was specifically constructed to do. (*Id.* ¶ 68; Trial Tr. (Goesling) at 3255:23–3256:3.) This demonstrates that the asset was adapted to the purposes of the LDT facility.

Additionally, the concrete slab underneath the circulation system is also strong evidence that GM intended it to remain in place for its useful life. *See, e.g., Mich. Nat'l Bank*, 293 N.W.2d at 628 (stating that “specially constructed concrete island” was evidence that bank’s deposit equipment was permanent); *Ottaco*, 574 N.W.2d at 396 (concluding that “concrete slab foundation” was evidence that mobile home was permanent). Likewise, this asset was connected to utilities by hard conduit, and could not be removed without disrupting the paint process at LDT. This is further intent of GM’s intent regarding the permanence of this asset.

Because all three prongs of the fixture test are met for this asset, the Court finds that this asset is a fixture.

2. *Representative Asset No. 9*

As noted above, Asset No. 9, the Top-Coat Bells, form a part of the wall of the top-coat spray booth, an agreed-upon fixture, and each applicator cabinet is rigidly anchored to the concrete floor by numerous anchor bolts. GM also routed hard conduit power connections to supply electricity to the Top-Coat Bells.

The parties agree that the attachment prong is satisfied, given the anchoring bolts and hard conduit affixing the asset to the realty. And much for the same reasons that the Paint Circulation Electrical System is adapted to the realty, so too are the Top-Coat Bells. And with respect to the adaptation element, the Top-Coat Bells provide an integral function in the assembly process along the production line. In other words, they are used in the production of vehicles for which the plant was specifically designed and constructed.

Lastly, the hard conduit attached to the asset also evidence GM’s intent for these assets to remain in place permanently, as the hard conduit supplying the utilities to the assets are permanent. The Plaintiff presented no compelling evidence sufficient to overcome the

combination — each of the Representative Assets at Defiance Foundry is plainly adapted to foundry-specific processes on realty that cannot realistically be used for any purpose other than as a foundry.

The Charger Crane is attached to the building through four load wheels that ride along Charge Crane rails, which in turn are bolted to structural support posts of the building. The Crane is at least constructively attached by virtue of its enormous weight of 70 tons, as well as its connection to the building's 480 volt power supply. These forms of attachment satisfy the first prong of the fixture test. *See Mahon*, 20 B.R. at 839 (concluding that overhead bridge cranes were constructively attached to the building in part by sitting on rails that were affixed to the building).

The Charger Crane satisfies the adaptation prong as well as it primarily benefits the realty, because operation of a foundry is the only viable use of this facility. And the intent element is plainly satisfied given the fact that at the time of installation, the crane was absolutely necessary for the foundry to operate. Moreover, the facility itself contains a “high bay” area with railroad tracks that are part of the foundry's material distribution center, significant structural steel and foundations to support the loads carried by a charger crane, and elevators. (Thomas Direct ¶ 28 (at Figure 1, Area 2) & Ex. A at 50; Trial Tr. (Thomas) at 758:23–759:8; DX-1019.) These aspects of the foundry accommodate the operation of the Charger Crane, and are strong evidence that upon installation, the crane was intended to remain in place permanently.

Accordingly, the Court finds that the Charger Crane is a fixture.

H. Representative Asset No. 15 - The Soap, Mount and Inflate System

The parties agree that this asset is attached to the realty (Goesling Direct ¶ 60): the Soap, Mount & Inflate System, which weighs approximately 40,000 pounds, is 90 feet long, takes up

over 1,000 square feet of floor space, and is bolted to LDT's concrete foundation and to white steel in thousands of places. (Stevens Direct ¶ 232; *see also* JX-1224, JX-1215.)

Regarding adaptation, the System fits within a broader process in which tires and wheels are delivered by conveyors to the Soap, Mount & Inflate System; the wheel-tire assembly then moves by conveyor to an adjoining leak test machine, to an adjacent machine that balances the assembly, and applies wheel weights as necessary, before the completed assembly is transported by an overhead conveyor system (Representative Asset 20) to the Final Skillet Conveyor (Representative Asset 21) on the main assembly line. (Stevens Direct ¶ 235.) As such, this asset is highly integrated into the assembly process on the assembly line, and without it, production would necessarily cease.

The intent element is satisfied given the Soap, Mount and Inflate System is "necessary to the purpose to which the realty [is] adapted," *Atl. Die Casting Co. v. Whiting Tubular Prods., Inc.*, 60 N.W.2d 174, 179 (Mich. 1953), and here, the LDT facility simply could not function as it was intended to, namely, as a producer of completed automobiles. GM then surely intended for the asset to remain in place permanently. Moreover, the asset would be exceptionally difficult and time-consuming to remove given its size, the complexity of disassembling it, the large number of lag bolt fasteners to the floor, and its extensive connections to utilities. (Stevens Direct ¶ 238.)

Because the three-part fixture test is satisfied, the Court finds that the Soap, Mount and Inflate System is a fixture.

I. Miscellaneous Assets

1. Representative Asset No. 13

The Body Shop Weld Bus Ducts at the Lansing Facilities consist of the electric power distribution weld bus ducts for the welding operations in the body shop.

The parties agree that this asset is attached to the realty as the majority of the asset is affixed to the building roof trusses at over 1,000 points with threaded rod and I-beam clamps. (JX-1181; JX-1182; Goesling Direct ¶ 161; Trial Tr. (Stevens) at 185:5–23.)

With respect to the adaptation prong, this asset, by supplying power to the body shop machinery, is clearly “a necessary or at least a useful adjunct to the realty, considering the purposes to which the [realty] is devoted.” *Wayne Cty.*, 563 N.W.2d at 680 (citation omitted). The realty, a manufacturing facility devoted to producing automobiles, requires electrical power be distributed to the assets that produce the automobiles themselves.

GM’s intent for this asset to remain in place permanently can be inferred by the fact that the Bus Ducts stretch almost two miles in a specially engineered layout, are designed to be used in place with different body styles, models, and welding equipment in the future, and are essential to the functioning of the LDT body shop. The asset, therefore, evidences an extremely high level of integration with other assets in the production line, and its removal would not only be a complicated, protracted, and expensive task, but without the asset, body shop assets would not receive electrical power and operations at LDT would essentially cease. And as with the conveyor systems, the modularity of this asset is of little consequence with respect to the intent of GM regarding the assets permanence.

Because all three prongs of the fixture test are met for this asset, the Court finds that Representative Asset No. 13 is a fixture.

2. Representative Asset No. 34

The Build Line With Foundation at Warren Transmission was an assembly line used for producing 4-speed transmissions and the parties agree that the foundation in which the asset was installed is a fixture.

The parties agree that the attachment prong is satisfied for this asset, as it was installed in a pit and attached to the building through bolts to embedded structural steel, bolts to the concrete floor, and connections to plant utilities that were routed through the building's concrete floor. The concrete walls of the foundation were fused with the concrete of the surrounding floor to make a solid interconnection. Additionally, the attachment and installation of this asset provides strong evidence of GM's intent for this asset to remain in place permanently, despite the fact that after the 4-speed transmission line stopped manufacturing transmissions, the assembly line was removed and the foundation was filled in. The prevalent use of concrete in the Build Line's installation demonstrates GM's intent at the time of installation, as courts may infer intent from "the manner of annexation." *Wayne Cty.*, 563 N.W.2d at 680; *see also Cincinnati Ins.*, 166 F. Supp. 2d at 1180 (finding "intent to make permanent" because milling machine was "affixed to [plant] with concrete").

And as with the Body Shop Weld Bus Ducts, the Build Line With Foundation was a critical component in the manufacturing process. The Build Line itself was a key piece of the integrated assembly line operation, and the facility could not operate without it. The asset was plainly "a necessary or at least a useful adjunct to the realty, considering the purposes to which the [realty] is devoted." *Wayne Cty.*, 563 N.W.2d at 680 (citation omitted). The adaptation prong is therefore satisfied.

All three prongs of the fixture test are satisfied for this asset, and the Court finds that it is therefore a fixture.

3. *Representative Asset No. 37 – the Courtyard Enclosure*

The Courtyard Enclosure, located at Warren Transmission, is an enclosure currently used for part storage that is a building extension enclosing vacant space between buildings at Warren Transmission. (Goesling Direct ¶ 242; Deeds Direct ¶ 202.) As noted above, the construction of

the Courtyard Enclosure included the installation of a concrete floor and the addition of structural steel framing among other things. The additions to the building to create the Courtyard Enclosure are all ordinary building materials, but the Defendants maintain that certain “components” of the Courtyard Enclosure, such as the dock levelers, the dock doors, the heat and fire safety systems, the toilets, the hot water tanks, and the lighting transformers, are fixtures. (Deeds Direct ¶¶ 9, 205; JPTO ¶ 15 (stating that Defendants assert that “certain non-building components of the asset are fixtures”).)

The Defendants, however, presented scant evidence relating to these “component” parts. Indeed, a single paragraph in Deeds’ direct testimony offers testimony relating to these items, and consists largely of conclusory sentences relating to the three-part fixture test. (*See* Deeds Direct ¶ 205 (discussing the heat system, stating that “[t]hey were necessary to production operations in the Courtyard Enclosure, integrated with a number of building systems, and therefore I believe they were intended to be permanent”).) And given that the bulk of these items were removed from the Courtyard Enclosure in 2012 and 2013 as part of a renovation (Goesling Direct ¶ 245), the Court was not presented with photographic evidence of them. Moreover, Deeds’s entire direct testimony on these “components” was couched with the caveat that his familiarity with these items was only based on his participation “in an asset ledger audit that included the Courtyard Enclosure,” and that he “believe[s]” (but apparently can’t say with any certainty) “that the [Courtyard Enclosure] included a number of components that were installed when the Courtyard Enclosure was installed in 1982, some of which in [his] opinion have an identity independent from the building itself.” (Deeds Direct ¶ 202.)

The Court is not satisfied with the evidence presented with respect to the Courtyard Enclosure components in question, and there is an insufficient record with respect to the

attachment, adaptation, and intent regarding the dock levelers, dock doors, heat system, fire safety, sprinklers, toilets, urinals, sinks, hot water tanks, and lighting transformers that the Defendants maintain are fixtures.

Accordingly, the Court finds that the Defendants have failed to meet their burden on establishing that this asset, or any of its component parts, is a fixture.

J. The CUC

1. GM was Permitted to Grant a Lien on its Residual Interest

The Collateral Agreement provides that the Term Lenders would have a security interest in any equipment or fixtures “in which [GM] now has or *at any time in the future may acquire* any right, title or interest.” (JX-2 at 7 (emphasis added).) Under the UCC, GM could assign its residual rights in the CUC. *See* N.Y. U.C.C. § 9-203 and Official Comment 6; Mich. Comp. Laws § 440.9203; *Litwiller Mach. & Mfg., Inc. v. NBD Alpena Bank*, 457 N.W.2d 163, 165 (Mich. Ct. App. 1990) (explaining that “[t]he UCC . . . does not require that a debtor have full ownership rights” in property to grant a security interest in that property).

Further, the CUC was not excluded from the grant of collateral. While clauses (ii) and (iii) of the Collateral Agreement exclude certain property that is subject to prior liens or that consists of rights under a contract, they only do so where the prior lien or contract prohibits GM from granting additional liens. The CUC Agreements did not prohibit GM from granting additional liens on its own interest, as long as any interests it granted third parties would not interfere with Delta II’s use or possession. (*See* JX-13 at 23 (USA § 2.02(e) (Delta II will keep its interest free of encumbrances); *id.* at 25 (USA § 2.04(b)) (GM will ensure that any interests in the CUC it grants third parties will not interfere with Delta II’s possession or use of the CUC).) The Court finds that the CUC is within the grant of collateral because (i) GM may assign its residual interest under the UCC; (ii) the UCC Agreements were secured financing agreements

rather than a true lease; and (iii) the Collateral Agreement does not exclude GM's interest in the CUC from the grant of collateral.

However, the parties never presented evidence at trial regarding to what extent the value of Old GM's residual rights in the CUC differed from the value of the CUC itself. The KPMG Report values the CUC outright, because New GM acquired the CUC free and clear of any encumbrances. For this reason, KPMG had no reason to calculate the value of the *residual* rights. The parties' expert witnesses were likewise silent on the issue. Accordingly, the Court declines to assign a dollar value to Old GM's residual rights in the CUC. The Court leaves the calculation of that value to the parties, as part of their efforts to resolve the remaining disputed issues after the release of this Opinion.

2. *The Structure Housing the CUC Assets is Real Property*

The parties agree that a portion of Representative Asset No. 11, the CUC, consists of ordinary building materials, which are not fixtures. (JPTO ¶ 116.) Naturally, the physical structure that the CUC assets are housed in is not itself a fixture, but real property.

3. *The CUC Systems are Fixtures*

The parties agree that the following components of the CUC are fixtures: (i) the utility piping; (ii) the hard electrical conduit; (iii) the air handling units; (iv) a chilled water holding tank; (v) three batch wastewater holding tanks; and (vi) a sludge holding tank. (*Id.* ¶ 117.) The Court finds that the remaining CUC Systems are also fixtures.

The Plaintiffs urge that the CUC Systems should be evaluated separately, despite their classification as a single Representative Asset. The Court recognizes that in some situations—such as separating the CUC building materials from the CUC Systems—evaluating an asset according to its component parts may be necessary. However, evaluating each individual component within the CUC Systems goes too far. The CUC Systems are highly integrated both

with each other and with the rest of LDT. The CUC is critical to the operation of the stamping, body, paint, and general assembly areas at LDT, providing necessary electrical power; hot, chilled, treated, and domestic water; steam; compressed air; and wastewater treatment. (Stevens Direct ¶ 288.) If any of the components of the major CUC Systems were removed, LDT operations would stop until the component was replaced with an identical one. (*Id.*; Trial Tr. (Stevens) at 121:21–23 (“Q. And without the CUC can the plant operate?” Stevens: “No. It could not.”).) It is not consistent with the level of integration of these assets to evaluate them piecemeal. Nevertheless, the Court has evaluated each component of the CUC Systems individually as well as collectively and found all of them to be fixtures.

Many components within the CUC are attached to the realty using custom-poured concrete pads and bolts. (*See, e.g.*, JX-1116; JX-1156; Goesling Direct ¶¶ 205, 210, 225.) Others are mounted on skids, which are likewise bolted to the floor, a concrete pad, or the building. (*See, e.g.*, JX-1122; Goesling Direct ¶¶ 210, 228.) Even where certain components are not bolted to the ground (for example, the centrifugal water chillers), their size and weight renders them constructively attached.

The CUC and the realty are also clearly adapted to one another. GM designed the CUC from the ground up to LDT’s specific requirements, specifying the equipment within the CUC and constructing a purpose-built enclosure for them. (Stevens Direct ¶ 288.)

The intent element is likewise satisfied for the components parts of the CUC in dispute here. The CUC, and each of the component parts that comprise it, provide necessary utilities to the LDT plant. These components are absolutely “necessary to the purpose to which the realty [is] adapted,” *Atl. Die Casting*, 60 N.W.2d at 179, and the each of these components contains features designed to “facilitate” that purpose. *In re Mahon*, 20 B.R. at 840. In order for LDT to

function as an auto manufacturing plant, the CUC must operate as it was intended to do. GM necessarily intended for the CUC and its component parts to remain in place as a permanent accession to the realty because without the CUC, the plant could not operate as intended.

Just the same, the utility system stemming from the CUC branches out to the assets across the manufacturing process, demonstrating an integration with the assets on the production line that is indicative of GM's intent for the CUC to remain in place permanently. Each of the CUC systems is essential to the functioning of, and specifically designed to support, the LDT facility, and none of the CUC systems have been moved since they were installed at LDT.

Because all three prongs of the fixture test are met with respect to the CUC Systems, the Court finds that the disputed components of the CUC are fixtures.

K. The Software

Representative Asset No. 7, Paint Top Coat Automation Software, is software that creates a user interface that allows users to monitor the paint spray application equipment, and control certain limited spray parameters, like air pressures and bell speeds. (Trial Tr. (Topping) at 932:15–934:13.)

Black's Law Dictionary defines software as “(1) [t]he sequence of instructions by which a computer accepts and translates input symbols, executes actions, and outputs symbols such as numbers, characters in an e-mail message, pictures in a text message, the music played on a mobile device, or GPS coordinates. (2) More broadly, anything that can be stored electronically.” BLACK'S LAW DICTIONARY (10th ed. 2014), Software. This definition highlights an intellectual hitch with finding that the Paint Top Coat Automation Software is a fixture—namely, that the software simply consists of a particular series of ones and zeros, not unique to any specific computer or hard drive, and not even unique to one particular location at

any given time.¹⁹ The intent prong of the fixture test analyzes the “intention to make the property a permanent accession to the realty,” *Wayne Cty.*, 563 N.W.2d at 676, but because the “information” that comprises the Paint Top Coat Automation Software cannot be in only one particular location at any given time, it is problematic to suggest that GM intended for it to remain with the realty, or even in one particular place at any given time.

In any event, the Court is not required to make a determination whether software can ever be a fixture. The Court need only determine whether the Paint Top Coat Automation Software is a fixture, and this particular asset has certain unique characteristics that facilitate this analysis. The attachment prong presents a difficult hurdle for the software to overcome, and certainly “Michigan, like other jurisdictions, recognizes the law of constructive annexation.” *Id.* at 680. But the Defendants have identified no case where a software program was held to be a fixture under the three-part fixture test, and the Court has not uncovered such a case in its own research.

Assets are deemed “constructively annexed” if “their removal from the realty would impair *both* their value and the value of the realty.” *Id.* at 679 (emphasis added) (citing *Colton*, 255 N.W. at 434). Here, the “removal” of the software from the realty would not impair its value, as it could be easily loaded onto another computer and perform the same functions elsewhere. And with respect to the removal of the software impairing the value of the realty, Topping testified at trial that if the Paint Top Coat Automation Software were to malfunction, the spray equipment would continue to run, and the automotive production at LDT could likewise continue. (Trial Tr. (Topping) at 952:12–17; 954:5–14.) This software is therefore not attached to the realty.

¹⁹ Topping concedes that the Paint Top Coat Automation Software could be loaded onto another computer and perform the same function, and also concedes that the computer on which the software could be loaded would not be a fixture. (Trial Tr. (Topping) at 975:16–977:21.)

This is not to say that software can never be a fixture. For example, each piece of spray equipment that the software monitors has its own software loaded onto it actually driving the functions of the paint assets themselves. (*Id.* at 932:15–934:23.) A fixture analysis relating to this type of software, more involved in executing functions along the production line, would entail a separate set of issues. But given the facts relating to the Paint Top Coat Automation Software, the Court finds that the Defendants have failed to meet their burden in establishing the attachment element of the fixture test.

The Court finds that Representative Asset No. 7 is therefore not a fixture.

L. Holding Furnace, Representative Asset No. 28

The third prong of the fixture test in both Ohio and Michigan relates to the intention to make the asset a permanent accession to the property in which it is located. *See Wayne Cty.*, 563 N.W.2d at 676 (The third element of the three-part fixture test is “intention to make the property a permanent accession to the realty.”); *Holland*, 19 N.E.2d at 275. And as noted above, it is the intention of the owner at the time of installation that matters. *See, e.g., Colton*, 255 N.W. at 434 (stating that “it was the intention of the [owner] when they purchased such articles” that controls); *Grand Traverse*, 2017 WL 1908535, at *3 (“The relevant time is when the object was attached to the real property.”).²⁰

With respect to the 100 Ton Vertical Channel Holding Furnace (Asset No. 28), the asset was installed in 2007 as part of the project of moving the malleable iron business to Defiance from a foundry in Saginaw, but when the malleable iron line was installed at Defiance, GM knew that

²⁰ The Court believes that the sale/leaseback agreements covering the AA Transfer Press and the B3-5 Transfer Press, entered into shortly after these presses were put into service, stating the intention that presses remain personal property, are properly considered in determining whether GM intended to make the presses a permanent accession to the realty. The Court believes these agreements are relevant in determining GM’s intent at the time of the installation.

The fact that Old GM knew that the asset would only be in use for a finite period of time operating in connection with the 4-speed transmission line belies the notion that it was installed with the intent to remain in place permanently. Accordingly, the third prong of the three part fixture test here is not met, and the Court finds that Representative Asset No. 28 is therefore not a fixture.

148

While courts regularly value assets sold as part of a going concern business using the going-concern premise of value, *see United Puerto Rican Food Corp.*, 41 B.R. at 566 (private market transaction), extra caution is required when the sale was not conducted at a market value. Going-concern value implies that the actual sale price is the appropriate benchmark for the court’s valuation, but in certain cases of government intervention, the sale price may not reflect the market value. “Courts have routinely held that *so long as the sale price is fair and is the result of an arm’s-length transaction*, courts should use the sale price” to value collateral. *SW Boston Hotel Venture, LLC v. City of Boston*, 748 F.3d 393, 411 (1st Cir. 2014) (citation omitted) (emphasis added); *accord, e.g., Urban Communicators PCS Ltd. P’ship v. Gabriel Capital, L.P.*, 394 B.R. 325, 336 (S.D.N.Y. 2008) (stating that “actual sale price” paid by buyer in section 363 sale was proper measure of value under section 506(a)).

149

Bankruptcy and other courts often use the cost approach to value assets as part of a going concern, particularly where there is a lack of reliable comparable market sales. *See, e.g., In re Grind Coffee & Nosh, LLC*, No. 11-50011-KMS, 2011 WL 1301357, at *8 (Bankr. S.D. Miss. Apr. 4, 2011) (holding that the cost approach was the “most reasonable estimate of market value” because of the lack of comparable sales data); *In re Hand*, No. 08-61624-11, 2009 WL 1306919, at *15 (Bankr. D. Mont. May 5, 2009) (holding that the “cost approach” was more reliable than the “sales comparison approach” when comparable sales data was limited); *Missouri Pac. R.R. v. I.C.C.*, 23 F.3d 531, 534 (D.C. Cir. 1994) (upholding decision to use RCNLD to value railroad assets); *Jeanes Hosp. v. Sec’y of Health & Human Servs.*, 448 F. App’x 202, 208 (3d Cir. 2011) (holding that RCNLD was the appropriate method of appraisal for a hospital and noting that the cost approach “is the most reliable method where . . . there is a lack of market activity”); *see also Waranch v. Comm’r*, 58 T.C.M. (CCH) 584 (T.C. 1989) (RCNLD was appropriate valuation methodology for shares in a utility company: the “cost approach is . . . used to estimate the market value of special-purpose properties, and other properties that are not

frequently exchanged in the market”). This Court agrees that the cost approach is a reliable method of valuation in the circumstances here.

C. The Bankruptcy Code Affords Significant Flexibility to the Court in Determining the Proper Method of Valuation

In the absence of a fair market sale price to use as a benchmark, the Court must look to other indicia of value, including the appraisals offered by the parties at trial. The Defendants correctly emphasize that the Court has significant flexibility in this exercise, urging the Court to accept KPMG’s RCNLD values while rejecting the TIC Adjustment as a “top-down” exercise. (Defendants’ Post-trial Brief at 450.) Indeed, the Supreme Court has noted that bankruptcy courts must determine “the best way of ascertaining replacement value on the basis of the evidence presented.” *Rash*, 520 U.S. at 965 n.6. The Court “may form its own opinion as to the value of the subject property after consideration of the appraisers’ testimony and their appraisals.” *In re Patterson*, 375 B.R. 135, 144 (Bankr. E.D. Pa. 2007) (quoting *In re Karakas*, 2007 WL 1307906, at *5). In other words, the Court need not choose any party’s proffered appraisal wholesale, but may instead pick and choose to determine “the best way” to value the collateral. The Third Circuit has affirmed a bankruptcy court’s reliance on an expert who “used his own analysis and judgment to adjust” a third party valuation report. *In re SemCrude L.P.*, 648 F. App’x 205, 213–14 (3d. Cir. 2016). The *SemCrude* court noted that the third party report was “contemporaneously prepared” and “not made in anticipation of litigation,” additional indicia of reliability. *Id.*

As explained below, the Court finds the most credible evidence of the value of the fixtures to be the Final Concluded Value derived by KPMG in its very lengthy report prepared for New GM in 2009 as part of New GM’s fresh start accounting. (*See* DX-141 (the “KPMG Report”).) The KPMG Report was not prepared for litigation purposes. Plaintiff and Defendants

each find things they like, and much they dislike, about the KPMG Report. The Court has considered, and discusses at length below, the valuation evidence offered by each side. In the end, the Court arrives at its own conclusions of value, for the most part based on the KPMG Report.

IX. FINDINGS OF FACT: VALUATION

A. The KPMG Report

Following the closing of the 363 Sale, KPMG was retained by New GM to provide an opinion regarding the fair value of total invested capital (“TIC”) and certain assets, liabilities and equity interests acquired by New GM as of the Closing Date. (DX-141 at 2.) Part of KPMG’s assignment was to provide New GM with “individual opinions of value” with respect to each of the hundreds of thousands of individual assets that New GM purchased. (Trial Tr. (Furey) 1336:24–1337:15; DX-364 (spreadsheet showing KPMG’s valuations of building and improvement assets); DX-365 (spreadsheet showing KPMG’s valuations of machinery and equipment assets).) KPMG determined the values of thirty-three of the thirty-nine Representative Assets for which the parties presented evidence of valuation at trial.²¹

Patrick Furey, a managing director in KPMG’s economic and valuations services practice, testified at trial regarding KPMG’s work for New GM. In 2009, Furey was a senior manager with KPMG and led the sixteen-person team that valued assets classified as “Personal Property,” which consisted primarily of machinery and equipment and included thirty of the Representative Assets. (DX-151A; Trial Tr. (Furey) at 1328:21–1329:5.) Three other Representative Assets were valued under the category of “Buildings and Improvements.” (DX-150A.) Furey spent nine months working on the KPMG Report mostly full time, attending site

²¹ The parties agreed that they would not present evidence at trial regarding the value of Asset 39, the Core Box Robot.

1552:25–53:10, 1528:16–22.) Thus, as Mr. Furey testified, KPMG did not conclude that the assets had a different value in the hands of New GM than they would have in the hands of Old GM or another party. (*Id.* at 1528:13–16.)

b) KPMG’s Application of the Cost Approach

After starting from the premise that the assets sold to New GM should be valued according to the principle of continued use, KPMG considered which valuation methodology to use: the cost approach, the income approach, or the market approach. Under the cost approach, an appraiser “estimate[s] the replacement cost of the current functionality that exists within the subject assets, and then adjust[s] that for various forms of obsolescence, including physical depreciation, functional obsolescence, and economic obsolescence.” (*Id.* at 1367:18–1368:3; DX-141 at 126.) Under the market approach, “the fair value reflects the price at which comparable assets . . . are purchased under similar circumstances.” (DX-141 at 56.) The income approach “is generally a way of assigning value to an asset based on its ability to generate cash flows,” typically using the discounted cash flow method. (Trial Tr. (Furey) at 1367:3–10; DX-141 at 127.)

The market approach is disfavored for unique assets for which recent comparable sales are limited or do not exist. (DX-354 (ASA Manual) at 94 (“The sales comparison approach is not feasible when the subject property is unique, and it generally will not be feasible if an active market for the property does not exist. . . . When an inactive market exists, property might be better analyzed using the income or cost approaches.”). KPMG also determined that the income approach was not feasible for the valuation of individual assets, because it was “not reasonable to try to attribute revenue and expenses to individual assets within a complicated plant like GM runs.” (Trial Tr. (Furey) at 1369:13–18; DX-141 at 127 (stating that the income approach was not used because “it was not feasible to attribute income to the individual assets”). Plaintiff’s

In contrast to the indirect method, the direct method was based more significantly on information provided by New GM management. KPMG first determined the total replacement cost of all the production equipment at a manufacturing facility, based on replacement cost data maintained by management. (DX-141 at 131; Ewing Direct ¶ 17.) KPMG reviewed this data and met with New GM management to discuss it. (Trial Tr. (Furey) at 1388:23–1390:18.) New GM provided replacement cost data to KPMG on a “line-by-line” basis, *i.e.*, on the level of each assembly line, body shop, or paint shop. New GM did not provide replacement cost data on the individual asset level, with the exception of stamping presses. (*Id.* at 1390:11–1391:11; DX-153 at 1; Ewing Direct ¶ 17.) KPMG summed the line-by-line replacement costs data to reach a facility-wide total replacement cost. (See DX-153 at 2, 4–6.) To reach values on the individual asset level, KPMG allocated that total cost according to each asset’s proportionate share of that facility’s total *indirect* RCN (calculated as described above). (*Id.*; Lakhani Direct ¶ 42; Trial Tr. (Furey) at 1391:14–25.) Furey testified that analyzing the replacement cost on a line-by-line level was “appropriate, given that most of these assets represent an assemblage of assets that were put together to produce a certain product, rather than a collection of unrelated individual assets in that listing.” (Trial Tr. (Furey) at 1466:7–1467:8.) Indeed, this Court has observed (as discussed above) that assets on a GM assembly line work in close tandem.

After determining both the direct and indirect RCN, KPMG determined which method to use for the assets in each facility or on each line. (*Id.* at 1391:14–1393:20.) KPMG compared the direct and indirect results for each line, and discussed the results of its analysis with New GM management. (See DX-153 at 2; *Id.* at 1391:14–1393:20, 1397:7–1399:10.) For most assets, KPMG chose the direct method because it represented the most “current” costs and technology. (Trial Tr. (Furey) at 1399:11–1400:19.) In some cases, such as assets that were outside the

major production lines and were therefore not included in the line-by-line approach, KPMG used the indirect method. (*Id.* at 1391:14–1393:20, 1397:16–1399:10.) Of the thirty Representative Assets that KPMG valued in the machinery and equipment portion of its Fresh Start Accounting exercise, twenty-two were valued using the direct method, and eight were valued using the indirect method. (DX-151A at 2–3.) Of the thirty GM North America (“GMNA”) facilities that KPMG evaluated as part of its valuation project, twenty-four were valued using the direct method and six were valued using the indirect method. (DX-141 at 130.)

(2) Physical Depreciation

Once establishing the RCN for each asset based on either the direct or indirect method, KPMG reduced that amount to account for physical deterioration. To do this, KPMG first determined the normal useful life of each asset, then subtracted that asset’s chronological age to determine its “remaining useful life” (“RUL”). (DX-141 at 131; Trial Tr. (Furey) at 1419:21–1420:16; *accord* DX-354 at 60–62.) Generally, KPMG derived the normal useful lives of the assets based on professional guidance published by the American Society of Appraisers and Marshall Valuation Service, along with input from New GM engineers. (Trial Tr. (Furey) at 1421:6–12, 1423:10–15; DX-141 at 119–21.)²² In some cases in which an asset was anticipated to be taken out of service before the end of its RUL, for functional or other business reasons, KPMG applied an override to shorten the RUL used in its calculation. (Trial Tr. (Furey) at 1423:17–25:6, 1426:23–1427:19.) Next, KPMG divided the remaining useful life of each asset by its normal useful life to calculate a “percent good,” which was multiplied by the replacement

²² Defendants’ fixture experts also provided their own opinions regarding the normal useful lives of the Representative Assets. KPMG’s normal useful life estimates were lower than those of Defendants’ fixture experts in all but one case (Asset No. 12), in which both KPMG and Stevens reached identical conclusions. (*See* Defendants’ Post-trial Brief at 29–30.)

cost of the asset to derive the replacement cost less physical deterioration. (See DX-151A at 2–3.)

(3) Functional Obsolescence

After determining the “percent good” for each asset, KPMG applied additional reductions to account for functional obsolescence, defined in the KPMG Report as “the loss in value caused by inefficiencies or inadequacies of the asset itself. Functional obsolescence is internal to the asset and is related to such factors as technological advancement, excess capability of the asset, excess capital costs, and excess operating costs.” (DX-141 at 132; *see also* Trial Tr. (Furey) at 1434:7–21.) Furey testified that KPMG reduced its valuation in four different ways to account for functional obsolescence: (i) a column in its valuation spreadsheet which separately applied reductions for assets at the GM Powertrain Tonawanda plant because the plant was “partly shuttered” in connection with the restructuring efforts (Trial Tr. (Furey) at 1437:16–1439:19, 1440:22–1441:25; *see* Stevens Direct ¶ 91); (ii) reductions in RUL as described above; (iii) a 35% reduction to the replacement cost value of certain powertrain assets due to decreased “functionality” in comparison to a modern facility (DX-153 at 1-2; Trial Tr. (Furey) at 1400:20–1402:8); and (iv) by using direct replacement cost rather than indirect. (Trial Tr. (Furey) at 1435:23–1436:2.) Furey testified that using the direct method, which uses replacement cost (rather than installed cost) as its starting point, “basically eliminates any excess value that can be ascribed to an asset, due to inefficiencies in the way that that asset was built. So our application of the direct replacement cost approach quantifies, by its nature, quantifies those excess capital costs and eliminates [the need to apply] functional obsolescence.” (Trial Tr. (Furey) at 1436:3–11.)

(4) Capacity-Based Economic Obsolescence

KPMG next applied reductions to account for capacity-based economic obsolescence. KPMG defined economic obsolescence as “[t]he loss in value of a property caused by factors external to the property such as economics of the industry; availability of financing; loss of material and/or labor sources; passage of new legislation; changes in ordinances; increased cost of raw materials, labor, or utilities; reduced demand for the product; increased competition; inflation or high interest rates; or similar factors.” (DX-141 at 108.) In basic terms, if a plant is underutilized, it suffers from economic obsolescence. KPMG used historical and projected capacity utilization data for the years 2008 through 2010 maintained by GM in the ordinary course of its business—a fairly conservative approach. (*See* Trial Tr. (Furey) at 1453:6–13, 1454:20–25, 1456:25–57:13; JX-19.)

(5) RCNLD

At this point in its analysis, KPMG reached a figure it called “Final RCNLD Pre Eo.” “RCNLD” stands for “Replacement Cost New Less Depreciation” and “Eo” (or “EO”) stands for “Economic Obsolescence.” RCNLD Pre Eo is the figure the Defendants urge the Court to adopt, while the Plaintiff argues that even if the KPMG report is relevant, RCNLD was only an interim step.

c) KPMG’s TIC adjustment

After reaching the RCNLD step, KPMG applied a further reduction based on total invested capital, or “TIC.” The parties have referred to this step as the “TIC Adjustment.” KPMG described the TIC Adjustment as a reduction to account for “economic obsolescence due to the earnings power of the business If the TIC analysis did not support the fixed asset valuation then an economic penalty was applied.” (DX-141 at 109.) In essence, the TIC

Among several “primary considerations” KPMG listed as contributing to the WACC, KPMG included research from two different sources “to benchmark the discount rates appropriate for business at various stages of development.” (DX-141 at 67.) KPMG noted that its benchmarking research indicated that a WACC of 23% is “consistent with a company that is in the Pre-IPO phase.” (*Id.*) KPMG further observed that the Bridge/IPO WACC band ranges from twenty to thirty-five percent, and placed New GM “towards the low-end of that range due to their established customer base and brand recognition.” (*Id.*) KPMG’s benchmarking analysis underscores that New GM was financially a new company, but with established brand recognition and an existing customer base. The Court finds that using a WACC on the low end of the IPO range appropriately takes into account these unique considerations.

161

higher risks inherent in realizing the operating returns forecast by GM over the general industry.” (*Id.* at 71.) KPMG had previously conducted numerous valuations incorporating a CSRP. (*Id.* at 70.) KPMG determined that a CSRP was appropriate for New GM because none of the other public companies used as benchmarks in its beta calculation were emerging from bankruptcy—a process that creates “additional relative volatility and return that the market would price into a company.” (*Id.* at 71.) KPMG determined that GMNA was subject to (among others) a “very high” restructuring risk, “very high” strategic risk, “high” general risk, and “very high” operational risk, leading to a relative risk assessment of “highest” and an approximately 27% CSRP. (*Id.* at 71–77.) VP-4B’s forecasted EBIT margins were also higher than Old GM’s historical profit margins, increasing the risk that New GM might not achieve its projections. (*Id.*)

Based in part on the WACC and CSRP described above, KPMG calculated a TIC for New GM as a whole of \$60 billion and for GMNA of \$21.7 billion. (DX-204; DX-141 at 265–77.) As a result, GMNA’s net asset value exceeded its TIC by approximately \$6.4 billion.²³

(2) The Application of the TIC Adjustment and Balance Sheet Adjustment

To bring the asset valuation in line with TIC, KPMG applied a 55% reduction to its valuation of the assets in the Personal Property and Equipment (“PP&E”) and Building and Improvements categories: the two categories containing all the Representative Assets that KPMG valued. (DX-151 at 2.) KPMG thus determined a “Final Concluded Value” for the assets. (*Id.*) Although this step normally would have concluded KPMG’s process, after applying the TIC Adjustment, KPMG learned additional facts that led it to conclude that GMNA’s TIC

²³ The Defendants urge the Court to rely on KPMG’s RCNLD values, but challenge KPMG’s calculation of the TIC and subsequent TIC Adjustment. As explained below, the Court rejects the Defendants’ arguments challenging the TIC Adjustment.

was higher than it first thought. (PX-261 at 14–15; Klein Direct ¶ 56.) Accordingly, KPMG made an upward adjustment to the valuation of the assets in three PP&E categories to account for the higher TIC. (DX-141 at 366.) After this adjustment, KPMG arrived at its final “Fair Value” (also called “Final Concluded Value”) figures. (*Id.*; DX-151A at 2.)

2. *Defendants’ Experts*

a) Abdul Lakhani

Abdul Lakhani is a retired partner of Ernst & Young (“EY”), where he spent his career as an auditor. (Lakhani Direct ¶ 1.) Lakhani has substantial experience in acquisition accounting, having worked on hundreds of business combination transactions during his career. (*Id.* ¶ 3.) He was retained by the Defendants to offer his opinion on KPMG’s valuation of the PP&E category of assets, including the specific values attributed to the Representative Assets valued by KPMG. (*Id.* ¶ 7.) Lakhani opines that KPMG’s RCNLD figures are “reliable, contemporaneous evidence” of the fair value of the Representative Assets as of the Valuation Date. (*Id.* ¶ 9(c).) The bulk of Lakhani’s testimony was devoted to arguing that the Court should adopt the RCNLD values without incorporating the TIC Adjustment.

Lakhani argues that KPMG’s calculation of TIC was faulty from the start, because it was based on incorrect intra-corporate reallocations among New GM’s business units. (*Id.* ¶ 114.) Lakhani primarily takes issue with a \$7 billion reallocation (the “Technology Reallocation”) of TIC from GMNA to GM’s Technology, Service and Tooling (“TST”) entity. (*Id.* ¶ 100.) He argues that the Technology Reallocation essentially double-counted the cost of certain royalty payments from GMNA to Global Technology Operations, Inc. (“GTO”), a division of TST. (*Id.* ¶¶ 103–04.) Had KPMG not made the Technology Reallocation, Lakhani argues, GMNA’s TIC would have correspondingly been \$7 billion higher, rendering the TIC Adjustment unnecessary. While Lakhani argues that the Technology Reallocation was inappropriate under GAAP, he also

challenges two other reallocations for corporate expenses as a matter of “professional judgment.” (*Id.* ¶ 109–14.) The KPMG Report reflects that KPMG determined the reallocations based on discussions with New GM management and its own analysis of New GM’s cash flows. (DX-141 at 65; Trial Tr. (Lakhani) at 1678:7–15.)

Lakhani opines that the TIC adjustment was inappropriate because it essentially assigned “negative goodwill” to GM’s PP&E assets. (Lakhani Direct ¶¶ 89–97, 116.) Further, he concludes, this practice was unacceptable under GAAP. Lakhani criticizes KPMG’s application of the TIC adjustment at an “interim” stage when the assets and liabilities were measured at fair value, without converting some assets and liabilities to their non-fair-value, GAAP-required amounts. (*Id.* ¶¶ 116, 118.) According to Lakhani, goodwill should be measured only *after* measuring all of GM’s assets, liabilities, and equity interests at their GAAP-required values. (*Id.* ¶ 121.) This would have meant that KPMG left the balance sheet unbalanced, but Lakhani testified that would be reasonable because “it wasn’t [KPMG’s] assignment to come up with a complete set of balance sheet[s].” (Trial Tr. (Lakhani) at 1729:8–18.) Lakhani opines that had KPMG evaluated goodwill after converting all elements of the balance sheet to their GAAP-required values, no TIC Adjustment would have been required, and GMNA would have recognized only \$20 billion in goodwill on its final balance sheet instead of the \$26.4 billion it ultimately did. (Lakhani Direct ¶ 122.) The Court notes that Lakhani’s opinion is significantly based on a single column header in a KPMG work paper entitled “negative goodwill,” although Furey credibly testified at trial that the column header was an isolated “shorthand” (Trial Tr. (Furey) at 1522:24–1523:6) and that KPMG did not conclude that “negative goodwill” existed. (*Id.* at 1548:21–1549:4.)

Even if the TIC Adjustment were appropriate, Lakhani argues, it should have been applied across all of New GM's asset categories pro rata, rather than only to certain categories of PP&E. (Lakhani Direct ¶¶ 124–26.) Lakhani opines that applying the TIC Adjustment only to PP&E essentially turned the value of assets in the PP&E category into a residual number, which was linked to other elements of the balance sheet such as operating liabilities. (*Id.* ¶¶ 91, 96; Trial Tr. (Lakhani) at 1736:6–1738:7; DX-189.) However, it is clear from the KPMG Report that the TIC Adjustment was applied only to the PP&E categories that were “valued via the cost approach,” not the market approach. (DX-141 at 142–43.) KPMG explained that “the market approach inherently captures all forms of obsolescence, so no additional adjustments for economic obsolescence were applied.” (*Id.* at 143.) However, the cost approach presumes that the value of the asset must be supported by the business earnings—a market participant would not pay more for the assets than the cash flow of the business could support. (*Id.* at 142.)

b) Glenn Hubbard

Hubbard is the Dean of the Graduate School of Business of Columbia University, where he holds the Russell L. Carson Professorship in Finance and Economics. (Hubbard Direct ¶ 2.) Hubbard has served as an economic advisor to numerous public and private institutions, and has authored over 100 research articles and other publications. (*Id.* ¶ 3.)

Hubbard's opinion focuses on the implied equity value as a result of the purchase price paid in the 363 Sale. Hubbard opines that even after reducing the 363 Sale purchase price to account for the government's public policy objectives, the purchase price implies a common equity value for New GM between \$33.4 and \$40.1 billion—significantly higher than KPMG's calculation. (*Id.* ¶ 9.) Had KPMG used the equity value implied by the purchase price according to Hubbard, GMNA's TIC would have been higher than its net asset value and no TIC Adjustment would have been necessary. (*Id.*) Hubbard testified that the purchase price paid by

the U.S. Treasury for 60.8% of New GM's equity implies a total equity value of \$65 billion—dramatically higher than KPMG's estimate of \$19.9 billion. (*Id.* ¶¶ 9, 73, 87; Trial Tr. (Hubbard) at 2302:19.) Hubbard acknowledges, however, that the purchase price included a premium for the government's "public policy objectives." (Hubbard Direct ¶ 76.) The Court will refer to this premium conceptually (no matter how it is calculated) as the "Public Policy Subsidy."

Hubbard opines that he can estimate the amount of the Public Policy Subsidy by relying on two public statements made by government employees involved with the 363 Sale. First, Hubbard cites a statement by Ron Bloom of the Auto Task Force that the U.S. Treasury expected "a reasonable probability of repayment of substantially all of the government funding for new GM and new Chrysler, and much lower recoveries for the initial loans." (*Id.* ¶ 79; JX-22 at 57 n.274.) Hubbard explains that Bloom's reference to "initial loans" refers to the pre-bankruptcy loans provided under TARP, while his reference to "government funding for new GM" refers to the DIP Facility. (Hubbard Direct ¶ 79; Trial Tr. (Hubbard) at 2369:18–2370:12, 2497:9–22.) Second, Hubbard cites a Congressional Budget Office report estimating that the Government would likely not recoup up to 73% of the initial TARP loans. (Hubbard Direct ¶ 80; Trial Tr. (Hubbard) at 2365:13–17, 2372:6–2375:6.) Based on those two public government statements, Hubbard estimates the amount of the Public Policy Subsidy at no more than \$15.3 billion to \$19.4 billion of the U.S. Treasury's investment. (Hubbard Direct ¶ 78; Trial Tr. (Hubbard) at 2364:2–18.)

Even without using Hubbard's own calculation of New GM's common equity value, Hubbard opines that KPMG's valuation of GMNA's TIC was "flawed" because KPMG used an unreasonably high WACC in its DCF valuation. (Hubbard Direct at ¶ 10.) KPMG used a 23%

Maryann Keller has spent over forty years as an auto industry analyst, working for several Wall Street firms and Priceline.com, and has served on numerous boards of directors and auto industry panels. (Keller Direct ¶¶ 1–3.) She is the author of two books focused on GM and the auto industry. (*Id.* ¶ 5.)

167

concerns about “restructuring risk” were unreasonable because (among other reasons) so-called “unnatural equity holders” such as the government and labor unions were actually unlikely to interfere in New GM’s management decisions. (*Id.* ¶¶ 104–05.) Keller further testified that KPMG’s concerns about the “strategic risk” inherent in New GM’s “unprecedented” strategy of maintaining only four brands was also misplaced; because the brands New GM planned to shed were not profitable, Keller argues, there was no need to account for “strategic risk.” (*Id.* ¶¶ 71–72, 110.) Keller also testified that KPMG’s assessment of New GM’s regulatory, operational, and competitive risks were unreasonably high.

3. *Plaintiff’s Experts*

a) Gordon Klein

Gordon Klein was retained by the Plaintiff specifically as a rebuttal expert to respond to Lakhani’s testimony. (Klein Direct ¶ 7.) Klein is a CPA and has taught numerous classes at UCLA and Loyola on the topics of corporate and partnership taxation, accounting, and business plan development. (*Id.* ¶¶ 2–4; Trial Tr. (Klein) at 2882:23–2883:18.) He is also the author of several books on accounting, finance, and business law. (Klein Direct ¶ 5.)

First, Klein testified that the KPMG Report is limited in scope and not applicable to this case because KPMG valued the Representative Assets in the hands of New GM, after the 363 Sale had already closed, and utilized a “value in use” premise of value rather than the “value in exchange” premise of value the Plaintiff urges. (*Id.* ¶ 31; *see* JPTO ¶ 42.) Klein argues that the value of assets measured as of July 10, 2009, may have been substantially different on June 30, 2009, because of uncertainties associated with the pending 363 Sale. (Klein Direct ¶¶ 31–32; Trial Tr. (Klein) at 2787:14–2788:7.) Further, KPMG only valued certain categories of assets and did not value goodwill. (Klein Direct ¶¶ 26–27.) Klein also argues that the KPMG Report

was limited in scope because KPMG was not retained as an auditor and consequently relied on information from New GM in its valuation exercise. (Klein Direct ¶ 29; *see* DX-141 at 2.)

Klein attacks KPMG's initial replacement cost values as imprecise, primarily because KPMG's direct replacement cost approach was built on line-level information provided by New GM management. (Klein Direct ¶¶ 70–71; *see also* DX-141 at 2.) Klein describes the line-level data provided by management as “aggregate estimates” that were prorated to individual assets in a formulaic manner—“not a careful determination of any individual asset's replacement cost.” (Klein Direct ¶ 70.) Klein argues that KPMG's direct replacement cost method was flawed because “KPMG took a management-provided, facility-wide estimate and divided it into portions, allocating this broad estimate to individual assets based on a formulaic approach” (*Id.* ¶ 71.) Similarly, Klein criticizes KPMG's use of facility-wide utilization rates to calculate capacity-based economic obsolescence. (*Id.* ¶ 81.) Klein also opines that KPMG's decision to apply the Balance Sheet Adjustment at the asset category level, rather than the individual asset level, underscores that its task was only to value categories and not individual assets. (*Id.* ¶ 58; Trial Tr. (Klein) at 2872:20–2875:13.)

Most forcefully, Klein argues that RCNLD was never intended to be used as a final value and is instead only an intermediate step in KPMG's process. (Klein Direct ¶¶ 115–16; *see also* Trial Tr. (Furey) at 1554:2–10.) RCNLD amounts never appear in the KPMG Report as final concluded values, and are always shown as intermediate columns in a sequence proceeding to “Final Concluded Values” or “Fair Value.” (Klein Direct ¶ 116.) Klein points out that KPMG referred to the RCNLD values as “RCNLD Pre EO,” indicating that the amounts did not reflect the remainder of its adjustment for economic obsolescence (in other words, the TIC Adjustment). (*See* DX-151A at 2.) Only after applying the TIC Adjustment, described in more detail above,

In addition to the Defendants' argument that the Court should adopt the RCNLD values, the parties put forth alternative valuations conducted by professional appraisers. Plaintiff's expert David Goesling and Defendants' expert Carl Chrappa, both qualified and experienced equipment appraisers, offered competing appraisals of the Representative Assets.

Goesling is a Managing Director in the Valuation & Financial Opinions Group at Stout
Risius Ross and is currently a senior member of the Machinery & Equipment Group, after
managing the group for more than nine years. (Goesling Direct ¶ 3.) Goesling has more than 35
years of experience performing valuations for clients for purposes including financial reporting,
asset-based lending, condemnations, litigation and bankruptcy. (*Id.* ¶ 5.) Goesling has appraised
automotive assets for multiple purposes including bankruptcy; those assets have included vehicle

components, vehicles, and automotive assembly plants in the United States, Germany, Belgium, and Romania. (*Id.* ¶ 6.)

a) Value in Exchange

Plaintiff's counsel asked Goesling to assume for purposes of his appraisal that "absent a substantial government subsidy, Old GM would have been unable to continue as a going concern." (*Id.* ¶ 387.) Goesling testified that he "reviewed the Expert Report of Daniel Fischel, which concluded, among other things, that there was 'no basis to attribute any value related to Old GM's assets as part of a going concern' and, further 'since there are insufficient cash-flows to support the operations of the firm, the value of the firm is estimated based on the prices one would expect to receive for the firm's assets as part of a disposition of those assets on a piecemeal basis through the secondary markets.'" (*Id.*) Based on this assumption, Goesling concluded that the highest and best use of the Representative Assets was value in exchange, or the market price that would be received from the sale of the assets on the secondary market. (*Id.*) Goesling relied on Fischel's opinion (*see supra* Section IX at 170) that liquidation is the appropriate premise of value. For the reasons already discussed in Section VIII, the Court rejects Goesling's valuation premise for the assets sold to New GM. As a result, the Court rejects the use of Goesling's methodology, but nevertheless includes a detailed discussion of Goesling's valuation work.

b) Orderly Liquidation Value

Once establishing that he would proceed based on the value in exchange premise, Goesling had to determine the appropriate definition of value: Fair Market Value, Orderly Liquidation Value, or Forced Liquidation Value. (Goesling Direct ¶ 388.) Fair Market Value, as defined in the professional literature, is "an opinion, expressed in terms of money, at which the property would change hands between a willing buyer and a willing seller, neither being under

any compulsion to buy or sell and both having reasonable knowledge of relevant facts.” (PX-163 at 11; Goesling Direct ¶ 388.) Orderly Liquidation Value is defined as: “[A]n opinion of gross amount, expressed in terms of money, that typically could be realized from a liquidation sale, given a reasonable period of time to find a purchaser (or purchasers), with the seller being compelled to sell with a sense of immediacy on an as-is, where-is basis, as of a specific date.” (PX-163 at 526; Goesling Direct ¶ 388.) Finally, Forced Liquidation Value is appropriate in circumstances where a seller is forced to sell in a severely restricted timeframe, such as a quick sale auction occurring in thirty to sixty days. (Goesling Direct ¶ 388.)

Goesling determined that Old GM was under “compulsion” to sell its assets. “GM was in bankruptcy and was on a tight timeframe to complete a 363 sale of most of its assets to avoid having to liquidate.” (*Id.* ¶ 389.) Goesling determined that Orderly Liquidation Value was the most appropriate premise of value in this case because Old GM had a “reasonable but limited amount of time to sell the assets.” (*Id.* ¶ 390.) Goesling assumed that Old GM would have had between nine and eighteen months to sell the Representative Assets. (*Id.*) He “assumed that the buyers would be a mix of end users, speculative purchasers, and scrap dealers. Had [he] used a Forced Liquidation Value premise, [he] would have assumed a higher percentage of speculative purchasers and scrap dealers, resulting in lower values for the assets.” (*Id.* ¶ 392.) Accordingly, Goesling used the Orderly Liquidation Value in Exchange (“OLVIE”) premise of value.

c) Application of Appraisal Techniques

(1) **The Income Approach**

Like KPMG and Chrappa, Goesling determined that the income approach was not an appropriate way to value the Representative Assets because “it is not possible to reliably allocate earning capacity when valuing individual assets.” (*Id.* ¶ 396.)

For the percent to cost technique, Goesling analyzed the ratio of used sales prices to the RCN of the asset, derived by reviewing transactions in assets similar to the forty Representative Assets in nature and age. He then analyzed the relationships between age, selling price, and replacement cost to develop a percent to cost factor. He applied those percent to cost factors to the cost of similar assets for which only limited or no market data was available. If the subject asset was the same age and quality as the similar asset from which the factor was extracted, Goesling applied the percent to cost factor directly. If the assets were similar but a different age, Goesling used a relationship analysis to adjust the percent to cost factor. (*Id.* ¶ 409.) Where there was no available data for comparable sales of similar assets, he considered whether the asset had any scrap value. Goesling obtained market data from industry publications, dealer websites, and his own experience and contacts within the machinery dealer industry. (*Id.* ¶ 410.)

Chrappa criticized Goesling’s use of the market approach at trial, because Goesling was not able to find market data for every Representative Asset and was in some cases only able to find a small number of comparable market sales. (Chrappa Direct ¶¶ 125–26, Ex. B.) Goesling acknowledged that “[t]he biggest problem was actually finding comparable sales information.” (Trial Tr. (Goesling) at 3432:6–18.) Chrappa also testified that it can be difficult to reliably estimate the necessary adjustments for installation and integration costs. (Chrappa Direct ¶ 52.)

(4) Reconciling the Cost and Market Approaches

As the Court discussed above, Goesling applied the cost approach to all of the Representative Assets, and the market approach to all of the Representative Assets for which he could obtain market data. To the extent possible, Goesling reconciled these results into a single conclusion of value for each asset. When he was able to apply both the cost and market approaches, he placed all weight on the market approach indication of value. (*Id.* ¶ 411.) Goesling testified that the market approach provides a more reliable indication of value as of the Valuation Date, as the adjustments can be more reliably calculated to develop an indication of value as compared to the cost approach.

2. *Chrappa: Fair Market Value in Continued Use with Assumed Earnings*

Carl Chrappa has over forty years of experience in the appraisal field. (*Id.* ¶ 8.) He is certified by the American Society of Appraisers, the Royal Institution of Chartered Surveyors, and the National Association of Independent Fee Appraisers, among others. (*Id.*) He has conducted over 1,000 appraisals in the course of his career, including between four or five dozen appraisals of automotive machinery and equipment. (*Id.* ¶ 10; Trial Tr. (Chrappa) at 1879:21–1880:5.) Chrappa was retained by the Defendants to conduct an appraisal of the Representative Assets as of the Valuation Date. Defendants argue that while KPMG’s RCNLD values are the most reliable values for the Representative Assets, the Court should rely on Chrappa’s valuation

GM produced a plan the government deemed credible. (Trial Tr. (Chrappa) at 1924:16–25:3; *see also* Trial Tr. (Worth) at 1853:9–15, 1862:4–7.)

c) Application of the Cost Approach

Chrappa decided to use the cost approach, rather than the income or market approaches. Chrappa determined, like KPMG and Goesling, that the income approach is not appropriate for the valuation of individual assets. (Chrappa Direct ¶ 42.) Unlike Goesling, however, Chrappa also considered the market approach inappropriate. Chrappa opined that there was not sufficiently high quality data from around the Valuation Date to reliably apply the market approach. (*Id.* ¶¶ 48–52.) For example, Chrappa opined that most of the sales data available was too far removed from the Valuation Date to be useful. (*Id.* ¶ 49.)

(1) Replacement Cost New

Like Goesling and KPMG’s “indirect” approach, Chrappa calculated the RCN for each asset using a trending method in which the historical installed cost of an asset is trended upward using price indices. (*Id.* ¶¶ 60–61.) With three exceptions (Assets 31, 12, and 30), Chrappa determined that the trended RCN was accurate. For Asset No. 31 (the Danly Press), Asset No. 12 (the Overhead Welding Robot), and Asset No. 30 (the TP-14 Press), Chrappa made downward adjustments to the trended historical cost to account for the fact that the cost to purchase an equivalent asset as of the Valuation Date would be lower than the trended historical cost. (*Id.* ¶ 61, Ex. A at 13, 34, 36.) Chrappa considered this adjustment to capture economic obsolescence for those three assets. (*Id.* ¶ 61.)

(2) Adjustments for Deterioration and Obsolescence

Chrappa applied deductions to capture the physical deterioration of all assets by applying the “age/life” method, which deducts a fraction of the value of the asset equal to its effective age divided by its life. (*Id.* ¶¶ 70–71; *see* DX-354 at 62.) KPMG and Goesling used a similar

As with his OLVIE valuation, Goesling placed all weight on the market approach result when possible; he used the cost approach result when there was not enough data to use the market approach. (*Id.* ¶ 449.)

valued higher as a whole than the sum of its individual assets, necessitating the TIC Adjustment. As the Court discussed further above, the Defendants' attacks on KPMG's calculation of GMNA's TIC and the TIC Adjustment are attempts to second-guess the contemporaneous judgment of KPMG and New GM management. The Defendants' attempts to attack KPMG's TIC calculation by estimating the amount of the government subsidy are speculative at best, and the Court will not engage in speculation. The Court finds that the TIC Adjustment is, in fact, the best reasonable way to prevent creditors from receiving a windfall from the Public Policy Subsidy. The TIC Adjustment, in KPMG's words, was intended to capture (and allocate to individual assets) the price a buyer would pay for assets "*on the open market.*" (DX-141 at 116 (emphasis added).) The Court finds that KPMG's Final Fair Value—including the TIC Adjustment—is the appropriate method by which to value the Representative Assets that were sold to New GM.

Both sides agree that the imputed price paid by the Government included a very substantial Public Policy Subsidy. That amount cannot fairly be assigned to the value in continued use of the specific assets acquired by New GM. Based on all of the evidence introduced at trial, the Court concludes that KPMG's TIC calculation was the best evidence offered by either side in arriving at a concluded value—without the Public Policy Subsidy—for the assets in dispute. This trial involved only forty representative assets of over 200,000 that need to be valued in the aggregate by settlement or judgment. KPMG's Final Fair Value amounts will provide a useful benchmark for the vast number of assets that were valued by KPMG.

D. Goesling's Orderly Liquidation Value in Exchange Analysis is a Reliable Valuation of the Assets that were not Sold to New GM

In contrast to the assets that were sold to New GM, the assets that remained with the Motors Liquidation estate were never intended to continue operating. (*See* Chrappa Direct ¶ 34.) The Court finds that OLVIE is the appropriate premise upon which to value those assets. Chrappa describes applying economic obsolescence to those assets based on his calls with four equipment dealers and his own experience, but the Court is convinced that Goesling's approach is the more reliable valuation method in this circumstance. Goesling applied both the cost and market approaches, choosing the method for each asset with the best available data. While the Court disagrees with Goesling's use of the OLVIE premise for assets that *were* sold to New GM, the Court notes that this disagreement is primarily with the guidance given to Goesling by counsel and not with Goesling's process itself. For assets whose proposed disposition at the Valuation Date was to remain with the Motors Liquidation estate and be liquidated, Goesling's OLVIE analysis is the best available valuation.

X. CONCLUSIONS OF LAW: VALUATION

A. The Assets Sold to New GM Should be Valued According to a Going Concern Premise of Value

1. The Proposed Disposition or Use of the Representative Assets Was to Be Sold to New GM as Part of a Going Concern Business

First, the Court finds that the Representative Assets that were sold to New GM should be valued using a going-concern premise of value. As of the Valuation Date, the 363 Sale had been negotiated, the deadline for competing bids had passed with no bids submitted, the Court had authorized DIP financing from the U.S. Government, and the DIP Facility had been funded. *In re Gen. Motors Corp.*, 407 B.R. at 485, 494. While there were indeed objections to the 363 Sale pending, no other disposition of the assets had been proposed or was seriously being

was never planned and never took place. On the other hand, the Defendants ask the Court to credit only part of KPMG’s work, disregarding the TIC Adjustment in favor of the intermediate RCNLD values. The Court is not bound to choose either option wholesale. *See Patterson*, 375 B.R. at 144. For the below reasons, the Court finds that KPMG’s Final Fair Values are the best available method to calculate the value of the Representative Assets sold to New GM, while excluding the non-market Public Policy Subsidy.

a) Defendants’ Arguments that the TIC Adjustment Should be Disregarded are Without Merit

SW Boston held that the sale price should be used to determine collateral value “so long as the sale price is fair and is the result of an arm’s-length transaction.” *SW Boston Hotel Venture*, 748 F.3d at 411 (emphasis added). While it is true that arm’s-length negotiations took place, Defendants concede that the 363 Sale did not result in a fair market price because the government paid a Public Policy Subsidy. (See Hubbard Direct Section IV.D; Fischel Direct ¶ 94.) The Court agrees with the cases on which Defendants rely, which hold that replacement value and the cost approach are appropriate methods to calculate collateral value. *See, e.g., United States v. Certain Prop. Located in Borough of Manhattan, City, County and State of New York*, 388 F.2d 596, 600–01 (2d Cir. 1967), *on reh’g in banc* (Jan. 24, 1968) (stating that evidence of “the current cost of comparable new fixtures less an appropriate allowance for deterioration from use and obsolescence” is ordinarily sufficient to value collateral); *In re Grind Coffee*, 2011 WL 1301357, at *8 (holding that the cost approach was the “most reasonable estimate of market value” because of the lack of comparable sales data); *In re Hand*, 2009 WL 1306919, at *15 (Bankr. D. Mont. May 5, 2009) (holding that the “cost approach” was more reliable than the “sales comparison approach” when comparable sales data was limited).

Where the Defendants’ argument falls short, however, is in the leap from cases approving the use of RCNLD and the cost method to the conclusion that the TIC Adjustment must be disregarded. The TIC Adjustment was part and parcel of KPMG’s application of the cost method. As discussed above in Section IX at 162–63, KPMG’s work was not completed until after the application of the TIC Adjustment and Balance Sheet Adjustment. In fact, the goal of the TIC Adjustment was to take into account that “the individual assets *cannot be valued at less than what they could be sold for on an individual basis in the open market.*” (DX-141 at 116 (emphasis added).) If the 363 Sale price were an accurate indicator of the assets’ value “in the open market,” there would have been no need for the TIC Adjustment. But KPMG appreciated the exact problem the Court now faces: the 363 Sale price was *not* a market price, and the amount of the non-market Public Policy Subsidy should *not* be attributed to individual assets. The TIC Adjustment was KPMG’s solution. The Court finds that the TIC Adjustment (including the subsequent Balance Sheet Adjustment) is the best available method supported by the evidence introduced at trial for removing the above-market value of the Public Policy Subsidy from the valuation of the Representative Assets.

b) Lahkani’s Criticisms of KPMG’s Valuation Process Are Unwarranted

The Court is guided by the principle, long recognized in the case law, that contemporaneous analysis not prepared for the purpose of litigation—absent indicia that it is unreasonable—is often more reliable than projections or other analysis performed years later. *See In re Lyondell Chem. Co.*, 567 B.R. 55, 112 (Bankr. S.D.N.Y. 2017) (“Expert analysis by investment bankers that confirms the validity of management’s projections is an indicator of reasonableness.”) (quoting *In re Iridium Operating LLC*, 373 B.R. 283, 348 (Bankr. S.D.N.Y. 2007)). In *Lyondell*, this Court placed considerable weight on “contemporary, informed opinion”

The Court is equally unpersuaded by Lakhani’s attack on the TIC Adjustment as an application of “negative goodwill.” Lakhani’s finding that KPMG incorrectly applied negative goodwill is based on a single column header in a work paper, which Furey testified did not refer to negative goodwill in the accounting sense, but was shorthand for KPMG’s calculation of TIC-based economic obsolescence. (Trial Tr. (Furey) at 1548:21–1549:4.) The Court is convinced

by the evidence at trial that the TIC Adjustment was an important aspect of KPMG's calculation of economic obsolescence, not a post-fair-value step that can be separated as a "goodwill" calculation. *See Certain Prop. Located in Borough of Manhattan*, 388 F.2d at 600–01 (calculation of deterioration for "use and obsolescence" is appropriate).

For this reason, it also makes sense that KPMG applied the TIC Adjustment only to those categories of PP&E that had been valued using the cost approach, not the market approach. (*See* DX-141 at 142–43.) The TIC Adjustment was part of KPMG's economic obsolescence calculation under the cost approach. Because the cost approach begins with replacement cost, not outside market factors, economic obsolescence factors (such as the TIC Adjustment) must be applied after the RCNLD is calculated. (*Id.* at 142.) In contrast, the market approach "inherently" captures all forms of economic obsolescence, obviating the need for additional adjustments. (*Id.* at 143.) Applying the TIC Adjustment across all categories of PP&E, as Lakhani urges, would over-correct the economic obsolescence of assets valued using the market approach, and under-correct the economic obsolescence of assets valued using the cost approach.

c) Hubbard's Attempts to Calculate the Value of the Public Policy Subsidy are Speculative

The Court is not persuaded that Hubbard (or anyone) is capable of calculating the amount of the Public Policy Subsidy based on the isolated public statements of two government employees. Hubbard's opinion purports to extrapolate the implied equity value of New GM from two statements in the public record, and then the implied equity value of GMNA from there. Hubbard opines that by subtracting the portion of the 363 Sale price that the U.S. Government paid to achieve its public policy goals (in other words, the Public Policy Subsidy), the remaining portion of the 363 Sale price is an accurate reflection of the market value of the U.S. Government's interest in New GM. But even if Hubbard could reliably determine the value

of the Representative Assets from the implied common equity value of New GM, his opinion rests on a faulty premise. The statements upon which Hubbard bases his testimony are isolated, subjective, and in the case of Ron Bloom, not even specific to GM. (*See* JX-21 at 138 (discussing “government funding for new GM *and new Chrysler*”).) Hubbard makes the extraordinary assumption that not only do these two statements accurately capture the total amount of funding the U.S. Government did not expect to recoup, but that the government was acting as a “private investor” with regard to the remainder of the purchase price. (*See* Hubbard Direct ¶ 82.)

The 363 Sale was an extraordinary transaction in nearly every way. The U.S. Government’s intervention in the auto industry was in many ways unprecedented. *See supra*, Section II at 10–11. On the record currently before the Court, it is impossible to tease out a clear delineation between the portion of the purchase price that reflected public policy goals, and the portion that a private investor would have paid, based on the statements of the government. What the government was willing to pay to achieve its public policy goals may or may not have had a close arithmetic relationship with the market value of New GM’s assets, as Hubbard opines. The Court will not rely on isolated public statements regarding the government’s intentions to work backwards toward a market-based valuation, especially when there is competent evidence of a contemporaneous DCF valuation.

d) Hubbard’s and Keller’s Attacks on KPMG’s WACC Are Unsupported Hindsight

Hubbard calculated an alternative WACC for New GM as a whole, and “assumed” that GMNA and New GM shared the same WACC because GMNA constituted the “vast bulk” of New GM. (Trial Tr. (Hubbard) at 2400:10–2401:5.) Even if this were true, Hubbard has not shown that KPMG’s WACC was not appropriate. Hubbard primarily attacks KPMG’s use of a

XI. CONCLUSION

The Court's Opinion sets forth in considerable detail the findings of fact and conclusions of law with respect to each of the Representative Assets. The Court's conclusions, whether each asset is a fixture and, if so, its value, are summarized in Table A below.

Dated: September 26, 2017
New York, New York

Martin Glenn
MARTIN GLENN
United States Bankruptcy Judge

Exhibit A

Table A: Specific Conclusions of Value for Each Asset

Asset No.	Asset Description	Sold to New GM	Fixture	Source of Valuation	Value
1	OP-150 Shims Station	Yes	Yes	KPMG Fair Value	\$117,942
2	Pits & Trenches	Yes	Yes ¹	KPMG Fair Value	\$1,219,221
3	Power Zone Conveyor	Yes	Yes	KPMG Fair Value	\$315,441
4	Electro-Coat Paint Operations ("ELPO") Waste System	Yes	Yes ²	KPMG Fair Value	\$493,319
5	Paint Circulation Electrical System	Yes	Yes	KPMG Fair Value	\$843,463
6	ELPO Oven Conveyor	Yes	Yes	KPMG Fair Value	\$549,178
7	Top-Coat Software	Yes	No	N/A	N/A
8	Paint Mix Room	Yes	No	N/A	N/A
9	Top-Coat Bells	Yes	Yes	KPMG Fair Value	\$1,246,182
10	Opticell Robotic System	Yes	No	N/A	N/A
11	Central Utilities Complex	Yes	Partial ³	N/A	N/A ⁴
12	Overhead Body Shop Welding Robot	Yes	Yes	KPMG Fair Value	\$8,630
13	Weld Bus Ducts	Yes	Yes	KPMG Fair Value	\$1,836,906
14	Leak Test Machine	Yes	Yes	KPMG Fair Value	\$357,753
15	Soap, Mount and Inflate System	Yes	Yes	KPMG Fair Value	\$797,390
16	Skid Conveyor	Yes	Yes	KPMG Fair Value	\$1,237,948
17	Power and Free Conveyor	Yes	Yes	KPMG Fair Value	\$818,853

¹ The parties agree that Representative Asset No. 2 is a fixture.

² The parties agree that Representative Asset No. 4 is a fixture.

³ The parties agree that the portions of the CUC consisting of ordinary building materials are realty and not a fixture. The Court finds that the rest of the CUC, including the CUC Systems, is a fixture.

⁴ KPMG determined the value of the portions of the CUC the Court rules are fixtures to be \$23,017,383. However, that value was based on New GM's free and clear ownership of the CUC, *not* Old GM's residual rights in the CUC. For the reasons discussed above in Section VII, the Court finds that there was not enough evidence presented at trial to determine the value of Old GM's residual rights in the CUC.

Asset No.	Asset Description	Sold to New GM	Fixture	Source of Valuation	Value
18	Vertical Adjusting Carriers	Yes	Yes	KPMG Fair Value	\$2,036,052
19	Full Body Coordinate Measurement Machine	Yes	Yes	KPMG Fair Value	\$155,820
20	Wheel & Tire Conveyor	Yes	Yes	KPMG Fair Value	\$569,821
21	Final Line Skillet Conveyor	Yes	Yes	KPMG Fair Value	\$732,989
22	Fanuc Gantry Robot	Yes	Yes	KPMG Fair Value	\$71,829
23	Aluminum Machining System	Yes	Yes	KPMG Fair Value	\$491,531
24	Base Shaping Machine	Yes	Yes	KPMG Fair Value	\$303,279
25	Liebherr Hobb Machine	Yes	Yes	KPMG Fair Value	\$336,977
26	Core Delivery Conveyor System	Yes	Yes	KPMG Fair Value	\$51,433
27	Emissions System	Yes	Yes	KPMG Fair Value	\$1,609,636
28	Holding Furnace	Yes	No	KPMG Fair Value	N/A
29	GG-1 Transfer Press (Grand Rapids)	No	Yes	Goesling OLVIE	\$261,000
30	TP-14 Transfer Press (Mansfield)	No	Yes	Goesling OLVIE	\$800,000
31	Danly Press	Yes	Yes	Chrappa with 55% reduction	\$396,000
32	AA Transfer Press	Yes	No	N/A	N/A
33	B3-5 Transfer Press	Yes	No	N/A	N/A
34	Build Line w/ Foundation	Yes	Yes	KPMG Fair Value	\$179,890
35	Button Up Conveyor System	Yes	Yes	KPMG Fair Value	\$785,571
36	Helical Broach	Yes	Yes	KPMG Fair Value	\$372,185
37	Courtyard Enclosure	Yes	No	N/A	N/A
38	Gas Cleaning System	Yes	Yes	KPMG Fair Value	\$87,411
39	Core Box Robot ⁵	Yes	Yes	N/A	N/A
40	Charger Crane	Yes	Yes	KPMG Fair Value	\$64,988

⁵ The parties agreed not to present evidence of the Core Box Robot's value at trial.

I. NATURE OF THE CASE

General Motors Corporation (“**Old GM**”) was the borrower under a \$1.5 billion secured loan (the “**Term Loan**”) governed by a Term Loan Agreement among Old GM, Saturn Corporation (“**Saturn**”), JPMorgan Chase Bank, N.A. (“**JPMorgan**”), as administrative agent, and a syndicate of lenders (with JPMorgan, collectively the “**Term Lenders**”). The Term Loan was secured by, among other things, Old GM’s and Saturn’s equipment and fixtures at a number of United States facilities. On June 30, 2009, Old GM wired approximately \$1.5 billion to JPMorgan, which was distributed to the Term Lenders, in full satisfaction of the Term Loan.

The above-captioned proceeding (the “**Avoidance Action**”) is an adversary proceeding commenced by the Motors Liquidation Company Avoidance Action Trust (“**Plaintiff**”), as successor-plaintiff to the Official Committee of Unsecured Creditors (the “**Committee**”) of Motors Liquidation Company, against JPMorgan and the other Term Lenders (collectively, “**Defendants**”) seeking to avoid the approximately \$1.5 billion Term Loan repayment.¹

On July 31, 2009, the Committee filed its initial complaint seeking to avoid the approximately \$1.5 billion Term Loan repayment on the basis that an umbrella UCC-1 financing statement filed in Delaware that perfected the Term Lenders’ security interests in equipment, fixtures, and related intangibles had been terminated. After the Second Circuit ruled that the umbrella UCC-1 had been effectively terminated prior to Old GM’s June 1, 2009 Chapter 11 bankruptcy petition, Plaintiff (as successor to the Committee) filed an amended complaint on May 20, 2015. Plaintiff’s amended complaint alleges that the lien on the collateral securing the

¹ For the avoidance of doubt, as defined and discussed herein, the Avoidance Action does not include the cross-claims filed by certain of the Term Lenders against JPMorgan. No cross-claims or cross-claim-related issues will be addressed or decided at the Representative Assets Trial (as discussed below). The parties reserve all rights with respect to the cross-claims.

Term Loan was not perfected as of June 1, 2009, and to the extent that some portion of the collateral was perfected by filings other than the umbrella UCC-1, the value of that portion of the collateral was less than the amount paid to Defendants and Defendants were not entitled to receive payment in excess of that amount. Defendants' claim that 26 other financing statements, known as fixture filings, covered the fixtures in a number of Old GM U.S. facilities and which statements were filed in the records of the counties in which such facilities are located.² The amended complaint seeks to recover from each of the Term Lenders their respective portion of the Term Loan repayment that exceeds the amount they are entitled to, along with other ancillary relief.

Following the filing of the amended complaint, Plaintiff and Defendants engaged in initial discovery as to the scope and value of the Term Loan collateral. Based on that initial discovery, it became clear that two principal issues divide the parties: (a) which of the over 200,000 assets of Old GM located in the facilities covered by the fixture filings are "fixtures," and (b) what is the proper methodology for valuing assets that are found to be fixtures.

In light of the broad scope of the dispute, the Court ordered this initial trial (the "**Representative Assets Trial**") that will focus on 40 representative assets selected by the parties (the "**Representative Assets**"). At the Representative Assets Trial, the Court will be asked to decide:

- (a) Whether each of the 40 Representative Assets is a fixture; and

² There was another umbrella financing statement in Delaware covering Saturn's equipment and fixtures, which is not at issue in the Representative Assets Trial (as defined below).

(b) What principles should be applied in valuing the Representative Assets as of June 30, 2009 (the agreed upon “**Valuation Date**”), and what was the value of each Representative Asset as of the Valuation Date applying those principles.

The Court will also be asked to decide three additional issues relevant to determining the scope of the Term Loan collateral:

(c) Whether Representative Asset No. 11, the CUC, is a fixture in which the Defendants had a perfected security interest as of June 1, 2009;

(d) Whether Defendants had a perfected security interest in the fixtures at the GM assembly and stamping facilities at Lansing Delta Township (the “**Lansing Facilities**”) as of June 1, 2009, and whether Plaintiff’s challenge to Defendants’ security interest in the fixtures at the Lansing Facilities is time-barred;

(e) Whether Defendants had a perfected security interest in the fixtures at GM Powertrain Pontiac Engineering facility, as of June 1, 2009.

After receiving the Court’s decision following the Representative Assets Trial, the parties have agreed to engage in mediation to attempt to resolve the Avoidance Action.

II. BASIS FOR JURISDICTION, WHETHER THE CASE IS CORE OR NON-CORE, AND WHETHER THE BANKRUPTCY JUDGE MAY ENTER FINAL ORDERS OR JUDGMENT

The Court has subject matter jurisdiction over the Avoidance Action pursuant to 28 U.S.C. §§ 157 and 1334(b) and (e). The Avoidance Action is a civil proceeding arising under, arising in, or related to cases under title 11 of the United States Code (the “Bankruptcy Code”). The Avoidance Action is referred to the Court pursuant to 28 U.S.C. § 157(a) and the Standing Order of Referral of Cases to Bankruptcy Judges in this District. Venue is proper pursuant to 28 U.S.C. §§ 1408 and 1409.

The Avoidance Action is a core proceeding pursuant to 28 U.S.C. §§ 157(b)(2)(A), (B), (E), (K), and (O).

The Court may enter final orders and judgments with respect to the issues to be decided by the Representative Assets Trial.

If it is determined that this Court, absent consent of the parties, cannot enter final orders or judgments with respect to the issues to be decided by the Representative Assets Trial consistent with Article III of the United States Constitution, Plaintiff and Defendants consent to entry of final orders and judgments by this Court with respect to the issues to be decided by the Representative Assets Trial.

III. BURDEN OF PROOF

The parties agree that in the specific circumstances of the Avoidance Action, Defendants bear the burden of proof on the issues to be tried, except the parties disagree on which party bears the burden with respect to the issue of whether Defendants had a perfected security interest in any fixtures at the Lansing Facilities. Plaintiff contends that Defendants bear the burden on this issue as well. Defendants contend that Plaintiff bears the burden on this issue.

IV. STIPULATED FACTS

The parties admit, stipulate, and agree that:

A. OLD GM

1. Old GM manufactured automobiles.
2. As of March 31, 2009, Old GM employed approximately 235,000 persons worldwide, with approximately 91,000 of those employed in the U.S.
3. Old GM utilized the services of thousands of different suppliers.
4. At least hundreds and possibly thousands of automotive parts suppliers depended on Old GM for survival.

5. Competition from foreign automakers and high costs put pressure on Old GM in the period leading up to 2009.

6. With the growth of competitors, between 1980 and early 2009, Old GM's market share for new North American vehicle sales dropped from approximately 45% to approximately 19.5%.

7. The pressure mounted in the fall of 2008 with an increase in gas prices, contraction of the credit markets, lowering of consumer confidence, high unemployment, and a further drop in consumer discretionary spending. These factors contributed to a downturn in auto sales.

8. Old GM was also burdened with significant structural costs, union restrictions, pension and healthcare obligations, an inefficient dealership network, and several failed brands.

9. These pressures and burdens resulted in Old GM facing a capital shortfall.

10. Old GM attempted to raise capital by selling certain business units and brands, including Saturn, Saab, Hummer, Opel, and AC Delco.

11. Old GM also explored a merger with Chrysler, but no such merger took place.

12. In April 2009, Old GM attempted a public exchange offer to provide equity to its outstanding bondholders. The public exchange offer announced in April 2009 was unsuccessful.

13. Between 2008 and June 30, 2009, Old GM engaged in certain unsuccessful attempts to secure private financing.

14. The price of Old GM's common stock declined from \$23.19 to \$0.75 per share from May 1, 2008 to May 29, 2009 (the last trading day before the June 1, 2009 filing of Old GM's Chapter 11 petition).

15. In its Form 10-Q filed on May 8, 2009, Old GM reported consolidated global assets of approximately \$82 billion and liabilities of approximately \$172 billion, as of March 31, 2009.

16. In its Form 10-Q filed on May 8, 2009, Old GM's reported total net revenue had decreased by 47.1% in the first quarter of 2009, as compared to the same period in 2008.

17. In late 2008, Old GM sought financial assistance from the United States Government.

18. In late 2008 and early 2009, the United States Government agreed to extend substantial financing to Old GM.

19. In late 2008 and through June 30, 2009, the United States and Canadian Governments were concerned that if Old GM had to cease operations, it would cause significant harm to the economy and exacerbate the financial crisis.

20. The United States Government implemented programs to assist the automotive industry through the U.S. Treasury and its Presidential Task Force on the Auto Industry pursuant to the Troubled Asset Relief Program ("**TARP**").

21. On December 31, 2008, the Government agreed to provide Old GM with a bridge loan of up to \$13.4 billion on a senior secured basis (the "**Treasury Prepetition Loan**") under TARP.

22. Old GM drew \$4 billion on that Treasury Prepetition Loan in December 2008. It then drew \$5.4 billion more, and the remaining \$4 billion on February 17, 2009.

23. On March 30, 2009, the President of the United States indicated that the United States Government would extend to Old GM adequate working capital for a period of another 60

days to enable it to continue operations, and that it would work with Old GM to develop and implement an appropriate viability plan.

24. On April 22, 2009, the United States Government and Old GM entered into amended credit agreements for the Treasury Prepetition Loan.

25. On April 24 2009, Old GM received a second TARP loan of \$2 billion.

26. On May 20, 2009, Old GM received a third TARP loan of \$4 billion.

27. Old GM had borrowed \$19.4 billion total from the Government by the end of May 2009.

28. As a condition to the TARP loans, Old GM was required to submit viability plans.

29. Old GM ultimately submitted five versions of its viability plan to the United States Government. The first four were rejected.

30. The United States Government accepted the fifth viability plan, Viability Plan 4B, which contemplated additional government funding in connection with a bankruptcy filing.

B. OLD GM'S CHAPTER 11 BANKRUPTCY CODE CASE AND THE 363 SALE

31. On June 1, 2009 (the "**Petition Date**"), Old GM and certain of its subsidiaries filed voluntary petitions for relief under Chapter 11 of the Bankruptcy Code in this Court.

32. On the Petition Date, Old GM also filed a motion in this Court seeking approval to sell substantially all of its assets to a Government-sponsored entity in an expedited sale under Section 363 of the Bankruptcy Code (the "**363 Sale**").

33. The Government-sponsored entity purchasing Old GM's assets was to be a new company, NGMCO, Inc. ("**New GM**"). The assets that New GM did not acquire would remain with Old GM, which was to be renamed Motors Liquidation Company.

34. Two of the Representative Assets, Representative Asset No. 29 (GG-1 Transfer Press) and Representative Asset No. 30 (TP-14 Transfer Press), were assets that were excluded from the 363 Sale, remained behind with Old GM, and were subsequently sold to third parties.

35. The other 38 Representative Assets, along with the plants in which they were operated, were included in the 363 Sale and were operated by New GM after the 363 Sale closed.

36. Pursuant to the 363 Sale, New GM agreed to provide 10% of the post-closing common shares of New GM, plus New GM warrants, to Old GM for the benefit of its unsecured creditors.

37. On the Petition Date, Old GM also filed a motion for debtor-in-possession (“DIP”) financing seeking immediate, interim postpetition financing up to a maximum aggregate amount of \$15 billion and final postpetition financing up to a maximum aggregate amount of \$33.3 billion.

38. On June 2, 2009, the Bankruptcy Court entered an order approving the DIP motion on an interim basis, permitting the Government to fund up to \$15 billion of the DIP loan.

39. On June 2, 2009, the Bankruptcy Court approved bidding procedures proposed by the Debtors, imposing a deadline of June 22, 2009, for any competing bids to the proposed 363 Sale. Pursuant to those procedures, market participants had an opportunity to bid to acquire substantially all of Old GM’s assets. If any bid was higher or better than the existing terms of the 363 Sale, then, subject to Bankruptcy Court approval, Old GM’s assets would be sold to that bidder.

40. No other bids for Old GM’s assets were submitted.

41. On June 25, 2009, the Court granted the Debtors' motion to approve the final DIP financing from the U.S. Government (Dkt. No. 2529) (the "**Final DIP Order**") and the U.S. Government provided an additional \$18.3 billion of DIP financing to Old GM.

42. On July 5, 2009, the Court approved the 363 Sale.

43. The 363 Sale closed on July 10, 2009.

C. THE TERM LOAN

44. Pursuant to a term loan agreement, dated as of November 29, 2006, and amended as of March 4, 2009 among Old GM, Saturn, JPMorgan as administrative agent, and a syndicate of bank lenders (the "**Term Loan Credit Agreement**"), Old GM borrowed approximately \$1.5 billion.

45. As of June 1, 2009, interests in the Term Loan were held by over 500 Term Lenders.

46. JPMorgan was the administrative agent for the Term Loan.

47. To secure Old GM's and Saturn's obligations under the Term Loan, pursuant to a November 29, 2006 collateral agreement (the "**Term Loan Collateral Agreement**," and collectively with the Term Loan Credit Agreement, the "**Term Loan Agreements**"), Old GM and Saturn granted to JPMorgan, as administrative agent for the Term Loan, a first-priority security interest in equipment, fixtures, documents, general intangibles, all books and records and their proceeds at 42 Old GM and Saturn facilities throughout the United States, plus certain related facilities (the parties dispute the scope of such related facilities) (the "**Collateral**").

48. A UCC-1 financing statement was filed with the Secretary of State of Delaware, which perfected the Term Lenders' security interest in all of the Collateral "now owned or at any time hereafter acquired" by Old GM and its affiliates (the "**Delaware Umbrella Financing Statement**").

49. A separate UCC-1 financing statement was filed with the Secretary of State of Delaware, which perfected the Term Lenders' security interest in all of the Collateral "now owned or at any time hereafter acquired" by Saturn and its affiliates (the "**Delaware Saturn Financing Statement**").

50. The Term Loan Agreements contemplated that fixture filings would be filed in county real estate records ("**Fixture Filings**") with respect to each of the "Material Facilities" in the corresponding office of the County Clerk for the counties where the Material Facilities were located.

51. "Material Facilities" is defined in the Term Loan Credit Agreement as manufacturing facilities listed on Schedule 1 to the Term Loan Collateral Agreement where Collateral with a net book value of at least \$100,000,000 was installed or located.

52. Twenty-six Fixture Filings were made.

53. As of the Petition Date, the outstanding principal balance on the Term Loan was over \$1.4 billion.

54. Per the Final DIP Order, on June 30, 2009, Old GM paid \$1,481,656,507.70 to JPMorgan, which JPMorgan distributed to the Term Lenders, in full satisfaction of all claims arising under the Term Loan Agreements.

55. On July 31, 2009, the Committee filed the Avoidance Action.

56. On an appeal from a decision of the Bankruptcy Court in the Avoidance Action, the Second Circuit held that, on October 30, 2008, JPMorgan authorized the filing of a UCC-3 termination statement with the Delaware Secretary of State that referred to the Delaware Umbrella Financing Statement (the "**2008 Termination Statement**").

57. The Second Circuit has also held that, as a result of the filing of the 2008 Termination Statement, the Delaware Umbrella Financing Statement was not effective as of the Petition Date.³

58. The filing of the 2008 Termination Statement did not affect any of the 26 Fixture Filings or the Delaware Saturn Financing Statement.

D. THE EATON COUNTY FIXTURE FILING

59. A Fixture Filing was recorded on behalf of JPMorgan on April 26, 2007, in Eaton County, Michigan (the “**Eaton County Fixture Filing**”).

60. The Eaton County Fixture Filing lists Old GM as the debtor.

61. The Eaton County Fixture Filing describes the collateral covered by it as “all fixtures located on the real estate described in Exhibit A.”

62. Exhibit A to the Eaton County Fixture Filing, as it is filed in the Eaton County Register of Deeds office, includes the following:

³ The Term Lenders reserve all rights with respect to their contention that the Second Circuit’s decision is not binding as to them.

LIBER 2113 PAGE 662

LandAmerica File No. 100729**

63. The metes and bounds description in Exhibit A to the Eaton County Fixture filing describes a vacant parcel of land across the street to the North of the Lansing Facilities.

64. The parcel described in the metes and bounds description in Exhibit A of the Eaton County Fixture Filing is denoted in a red outline on Adv. Pro. Dkt. No. 827 Ex. 1, a sketch plan of the metes and bounds description jointly commissioned by the parties.

65. The street addresses for the Lansing Facilities include 8175 Millett Highway, Lansing, MI and 8001 Davis Highway.

E. REPRESENTATIVE ASSETS NOS. 32 AND 33

66. Defendants do not claim a security interest in Representative Asset No. 32 (AA Transfer Press) and Representative Asset No. 33 (B3-5 Transfer Press) under the Term Loan Agreements.

F. THE CENTRAL UTILITIES COMPLEX

67. Representative Asset No. 11, the Central Utilities Complex (the “**CUC**”), is subject to three agreements relating to the CUC’s construction, financing, maintenance, and use: (a) the Utility Services Agreement between Delta Township Utilities II, LLC (“**Delta II**”) and Old GM – Worldwide Facilities Group, dated April 14, 2004 (the “**USA**”); (b) the Tri-Party Agreement by and among Delta II, as debtor, GMAC Commercial Holding Capital Corp. (together with its successors in interest, “**GMAC**”), as lender, and Old GM, dated as of April 14, 2004 (the “**Tri-Party Agreement**”); and (c) the Loan and Security Agreement by and between GMAC, as lender, and Delta II, as debtor, dated as of April 14, 2004 (the “**LSA**” and collectively with the USA and the Tri-Party Agreement, the “**CUC Agreements**”).

68. As of June 1, 2009, any security interest Defendants had in the CUC was subject to the lien created by the CUC Agreements.

G. MFD PONTIAC/POWERTRAIN ENGINEERING PONTIAC

69. Article II(a) of the Collateral Agreement grants Defendants a security interest in all fixtures located at “any plant or facility of [GM] listed on Schedule 1, including all related or appurtenant land, buildings, Equipment and Fixtures.”

70. The Metal Fabricating Division (Stamping) Pontiac facility (“**MFD Pontiac**”) is listed as one of the 42 facilities on Schedule 1 of the Term Loan Collateral Agreement, and is a Material Facility for which a Fixture Filing was filed.

71. Defendants have a perfected security interest in any fixtures at MFD Pontiac.

72. GM Powertrain Engineering Pontiac (“**Powertrain Engineering Pontiac**”) is not listed on Schedule 1 of the Collateral Agreement.

H. VALUATION DATE

73. June 30, 2009, the date the Term Loan was repaid in full, is the date as of which the Representative Assets are to be valued.

I. DESCRIPTION OF THE 40 REPRESENTATIVE ASSETS

74. Representative Asset No. 1, the OP-150 Select, Check Place Shims Auto Station, which is located at Warren Transmission, is a shim select and placement machine. The asset measures transmission housings to ensure they conform to design tolerances and selects and installs a thin piece of metal, or “shim,” with the specific thickness needed to adjust for any detected intolerance. The asset was put into service in June 2006 and had an installed cost of \$467,741.

75. Representative Asset No. 2, General Assembly Pits & Trenches, which is located at the Lansing Facilities, consists of various pits and trenches required for installation of certain machinery and equipment used in the general assembly of vehicles, including several conveyors. The asset was put into service in July 2006 and had an installed cost of \$2,307,597.

76. Representative Asset No. 3, Power Zone Roller Conveyor Automation TCH MOD 3, which is located at Warren Transmission, is a powered conveyor system that moves rough transmission housing castings through a number of Computer Numerically Controlled, or “CNC,” milling machines that mill the housings to GM’s specifications and then delivers the milled housings to smoothing and testing machines. The asset was put into service in February 2007 and had an installed cost of \$1,053,051.

77. Representative Asset No. 4, Paint Building Lines – Process Waste ELPO, which is located at the Lansing Facilities, is the waste processing system for the Electro-coat Paint Operation, or ELPO system. This asset consists of a system of trenches, piping, and pumps that

carries liquid waste from the ELPO process to the waste treatment facility at the Central Utilities Complex. The asset was put into service in April 2006 and had an installed cost of \$935,780.

78. Representative Asset No. 5, Paint Mix & Circulation – Electrical, which is located at the Lansing Facilities, is a paint mix and circulation electrical system that consists of electrical distribution and control cabinets that support the paint mixing and circulation equipment for the paint shop. The asset was put into service in November 2006 and has an installed cost of \$1,899,672.

79. Representative Asset No. 6, Paint Dip Conveyor – ELPO Oven IMC, which is located at the Lansing Facilities, is a conveyor system that carries vehicle bodies through the Electro-coat Paint-curing Operation, or ELPO, process. The conveyor spans all three operating levels of the paint shop and transports vehicle bodies through the ELPO system's curing ovens. The asset was put into service in November 2006 and had an installed cost of \$1,107,185.

80. Representative Asset No. 7, Paint Top Coat Automation Software, which is located at the Lansing Facilities, is software that controls the operation of the primer and top coat / clear coat conveyors and paint process equipment, such as Representative Asset No. 9 the TC2 CC Bell Zone. The asset was put into service in November 2006 and had an installed cost of \$200,000.

81. Representative Asset No. 8, General Assembly End of Line Paint Spot Reprocess System Paint Mix Room, which is located at the Lansing Facilities, is a self-contained paint mixing room located inside the general assembly area. It is used as a vented enclosure to mix small batches of paint for minor paint repairs to vehicle bodies at the end of the final assembly line. The asset was put into service in November 2006 and had an installed cost of \$815,150.

82. Representative Asset No. 9, Paint TC2 CC Bell Zone, which is located at the Lansing Facilities, is a set of paint applicator machines or “Bells” mounted overhead or installed through the walls of one of the spray booths in the paint shop. The Bells apply a clear coating to the sides, front, top, and back of a vehicle body as one of the final steps in the paint process. The asset was put into service in November 2006 and had an installed cost of \$2,805,703.

83. Representative Asset No. 10, Opticell – Robotic Measurement System, which is located at the Lansing Facilities, is an OptiCell robotic measuring system that uses white light scanning technology to check a sampling of the finished stamped metal panels for quality assurance purposes. The asset includes the robot itself and the robotic transportation unit on which the robot slides. (Defendants believe that the associated safety fencing was included in GM’s fixed asset ledger as part of this asset; Plaintiff believes that the associated safety fencing was not included in GM’s fixed asset ledger as part of this asset). The asset was put into service in March 2006 and had an installed cost of \$630,726.

84. Representative Asset No. 11, Lansing Delta Township Assembly Utility Services, which is located at the Lansing Facilities, is the “CUC” for the Lansing Facilities. The asset includes the building itself, as well as the water, air, heating, processing and electric systems contained within it. The asset was put into service in April 2006 and had an installed cost of \$73,997,467.

85. Representative Asset No. 12, Body Shop Robot LAZN-150R1, which is located at the Lansing Facilities, is a framing robot that is installed on an overhead structure. The robot is one of a number of robots in the outer body framing station in the body shop that apply spot welds to join together body panels into a complete vehicle body outer frame. The asset was put into service in November 2006 and had an installed cost of \$27,526.

86. Representative Asset No. 13, Body Shop Weld Bus Ducts, which is located at the Lansing Facilities, consists of the electric power distribution weld bus ducts for the welding operations in the body shop. The weld bus ducts deliver electrical power to body shop equipment, such as robot mounted weld guns and other weld equipment. The bus ducts are installed overhead throughout a large portion of the body shop. The asset was put into service in July 2006 and had an installed cost of \$3,993,837.

87. Representative Asset No. 14, Leak Test Base Machine Qty = 1, which is located at Warren Transmission, is a leak test machine that tests for fluid leaks in transmission housings after they have been manufactured and before they are sent to the transmission assembly line. This asset was put in service in July 2007 and had an installed cost of \$1,254,458.

88. Representative Asset No. 15, General Assembly Tire/Wheel: Soap; Mount and Inflate, which is located at the Lansing Facilities, is a tire and wheel assembly system that assembles tires and wheels into finished wheel and tire assemblies by applying soap to lubricate the tires and wheels, mounting the tires to the wheels, and inflating the tires. The asset was put into service in November 2006 and had an installed cost of \$1,897,124.

89. Representative Asset No. 16, Body Shop Skid Conveyor – LAZA, which is located at the Lansing Facilities, is a skid conveyor system that includes the conveyor itself and the mezzanine. (Defendants believe that the support steel was included in GM's fixed asset ledger as part of this asset; Plaintiff believes that the support steel was not included in GM's fixed asset ledger as part of this asset). This conveyor transports skids carrying complete vehicle body frames from the end of the outer framing line, where the outer body frames are welded to the inner body structures, to the start of the area where doors, hoods, lift gates and fenders are

added. The asset was put into service in November 2006 and had an installed cost of \$2,495,283.

90. Representative Asset No. 17, Body Shop Power and Free Conveyor – Body Side Inner LH DEL, which is located at the Lansing Facilities, is an overhead power and free conveyor system that includes the conveyor itself and the mezzanine structure. (Defendants believe that the support steel was included in GM’s fixed asset ledger as part of this asset; Plaintiff believes that the support steel was not included in GM’s fixed asset ledger as part of this asset). The conveyor transports complete inner body subassemblies for the left side of the vehicle to the inner body framing station, where they are joined to other inner body frame components. The asset was put into service in November 2006 and had an installed cost of \$1,649,074.

91. Representative Asset No. 18, General Assembly Conveyor: Vertical Adjusting Carrier (VAC) Sys – Carriers (Qty 87), which is located at the Lansing Facilities, is a set of 87 vertical adjusting carriers that travel along an overhead rail, which is part of a separate eFast ledger line. The carriers transport vehicle bodies through the chassis assembly line, which is where the suspension and vehicle powertrains are attached to the vehicle bodies. The asset was put into service in November 2006 and had an installed cost of \$4,141,896.

92. Representative Asset No. 19, Body Shop Coordinate Measuring Machine Full Body Machine – LY90, which is located at the Lansing Facilities, was a Full Body Coordinate Measuring Machine, or a CMM. The machine was used to take precise measurements of auto bodies manufactured in the body shop for quality purposes. The asset was put into service in November 2006 and had an installed cost of \$354,000. It was removed in 2015. The other Full

Body CMM installed in the same room is similar in size and installation to Representative Asset No. 19.

93. Representative Asset No. 20, General Assembly Conveyor Sub-ASM Receiving (SAR): WTD1000 – Wheel & Tire Delivery, which is located at the Lansing Facilities, is a conveyor system that transports wheel and tire assemblies from the tire and wheel assembly system to the final assembly line. The asset was put into service in November 2006 and had an installed cost of \$1,150,919.

94. Representative Asset No. 21, General Assembly Conveyor: Skillet-Final-Leg 1, which is located at the Lansing Facilities, is a skillet conveyor system that transports nearly complete vehicles on skillets through the final assembly process. The asset was put into service in November 2006 and had an installed cost of \$1,484,980.

95. Representative Asset No. 22, Fanuc M-710IB/70T Robot – Assembly, which is located at Warren Transmission, is a Fanuc robot mounted on a gantry rail. The asset is used to move gears within a subassembly process before the finished gears are sent to the transmission assembly line. (Defendants believe that the associated safety fencing and interlocks were included in GM's fixed asset ledger as part of this asset; Plaintiff believes that the safety fencing was not included in GM's fixed asset ledger as part of this asset.) The asset was put into service in July 2007 and had an installed cost of \$270,101.

96. Representative Asset No. 23, Aluminum Machining System, which is located at Warren Transmission, is an aluminum machining system that is connected to Computer Numerically Controlled, or "CNC," machines. The asset includes the piping that circulates clean, temperature controlled coolant to the CNC machines and also removes metal chips generated during the CNC milling process from the coolant so the coolant can be recirculated to

the CNC machining centers. The asset was put into service in June 2006 and had an installed cost of \$1,946,878.

97. Representative Asset No. 24, LFS220 Base Shaping Machine-Op 20 Transfer Drive Gear, which is located at Warren Transmission, is a Base Shaping Machine, which is a type of Computer Numerically Controlled, or “CNC,” machine that is part of the process of machining or cutting steel blanks into transfer gears that are used in GM transmissions. The asset was put into service in December 2007 and had an installed cost of \$1,050,540.

98. Representative Asset No. 25, Liebherr Hobb Machine from St. Catharines, which is located at Warren Transmission, is a hobb machine manufactured by Liebherr. It is another type of Computer Numerically Controlled, or “CNC,” machine and is part of the process of machining or cutting steel blanks into transmission gears that are used in GM transmissions. The asset was moved from GM’s St. Catharines, Ontario facility to Warren Transmission in 2008. It had an installed cost of \$1,192,377.

99. Representative Asset No. 26, Core Delivery Conveyor System CB116 & 122, which is located at GM Powertrain Defiance, is a conveyor system and associated support platform that transports engine core sub-assemblies as part of the iron casting process at Powertrain Defiance. The asset was put into service in November 2007 and had an installed cost of \$280,816.

100. Representative Asset No. 27, Emissions System #4 Cupola, which is located at GM Powertrain Defiance, is a gas cleaning system that heats the hot blast air injected into the No. 4 melting furnace at Powertrain Defiance (also known as a “cupola”) and removes and controls particulates and toxic gases generated by those foundry melting. The asset replaced an earlier system that served a similar function, Representative Asset No. 38, the System Gas

Cleaning No. 4 Cupola. The asset was put into service in November 2007 and had an installed cost of \$9,811,712.

101. Representative Asset No. 28, 100 Ton Vertical Channel Holding Furnace, which is located at GM Powertrain Defiance, is a furnace that holds molten iron at a stable temperature until the mold line at Powertrain Defiance requires the molten iron. The asset was put into service in December 2007 and had an installed cost of \$4,174,288. The asset was removed in 2011.

102. Representative Asset No. 29, Transfer Press-GG-1, which was located at GM Metal Fabricating Division (MFD) Grand Rapids, is a transfer press that processes sheet metal blanks through a series of two rams that transform the metal using large dies to produce finished automotive body parts. The asset was put into service in September 1989 and had an installed cost of \$11,340,238. The GG-1 press was left with Old GM and not included in the 363 sale. It was sold by Maynards and Hilco in 2010.

103. Representative Asset No. 30, TP-14 CS1-1 Transfer Press Danly ET-2, which was located at GM Metal Fabricating Division (MFD) Mansfield, is a transfer press that processes metal coil through a single ram that transforms the metal using large dies to produce finished automotive body parts. The asset was put into service in September 1987 and had an installed cost of \$4,636,106. The TP-14 press was left with Old GM and not included in the 363 sale. It was sold by Maynards and Hilco in 2011.

104. Representative Asset No. 31, Danly 4000 Ton Press, which is located at the Lansing Facilities, is a Danly 4000 ton press. This press is currently used to test or “tryout” dies, which are the tools used in the production presses to stamp sheet metal into specific shapes. The asset was originally put into service in October 1980 at the GM Indianapolis stamping plant to

make truck body components and had an installed cost of \$2,729,407. It was moved to Delta Township in 2003.

105. Representative Asset No. 32, AA-11 Schuler No. 1 AA Crossbar Transfer Press, which is located at the Lansing Facilities, is an AA transfer press manufactured by Schuler. This press processes sheet metal blanks through a series of five rams that transform the metal using large dies to produce finished automotive body parts. The asset was put into service in September 2003 and had an installed cost of \$33,767,895.

106. Representative Asset No. 33, B3-5 Transfer Press System Incl. Destacker and End of Line, which is located at the Lansing Facilities, is a B3-5 transfer press system manufactured by IHI, which includes the press itself, the destacker/feeder that feeds the metal into the press, and an end-of-line system that removes the stamped parts from the press. This press system processes sheet metal blanks through a series of three rams that transform the metal using large dies to produce finished automotive body parts. The asset was put into service in December 2003 and had an installed cost of \$27,682,072.

107. Representative Asset No. 34, Build Line W/ Foundation, which is located at Warren Transmission, was an assembly line used for producing four-speed transmissions. The foundation in which the asset was installed is a fixture. (The parties disagree over whether the foundation is part of the Representative Asset or part of a separate eFast ledger line). The build line with foundation was put into service in December 1983 and had an installed cost of \$3,580,522. After the four-speed transmission line stopped manufacturing transmissions, the assembly line was removed and the foundation was filled in.

108. Representative Asset No. 35, Button up and Test Conveyor System, which is located at Warren Transmission, is a conveyor system that moves transmissions through the final

leg of the transmission assembly and testing process. The asset was put into service in June 2006 and had an installed cost of \$2,689,706.

109. Representative Asset No. 36, Helical Broaching Equipment, which is located at Warren Transmission, is a type of Computer Numerically Controlled, or “CNC,” machine used to cut gear teeth on a steel gear blank for use in GM transmissions. The asset was put into service in June 2006 and had an installed cost of \$1,472,023.

110. Representative Asset No. 37, Courtyard Enclosure, which is located at Warren Transmission, is an enclosure that is currently being used for part storage. The asset was put into service in December 1982 and had an installed cost of \$8,384,325.

111. Representative Asset No. 38, System Gas Cleaning No. 4 Cupola, which is located at GM Powertrain Defiance, is a gas cleaning system that cleaned high-temperature exhaust gases from a cupola at Powertrain Defiance. The asset was put into service in May 1976 and had an installed cost of \$1,173,272. The asset was idled in 2007.

112. Representative Asset No. 39, CB 91 Robot, is a robot that unloads engine cores from the CB 91 core making machine. The asset delivers each core to several work stations before delivering a complete core sub-assembly to a conveyor for further processing. The sub-assemblies are used later in the iron casting process at Powertrain Defiance. The asset was put into service in March 2005.

113. Asset No. 40, P&H 7 1/2 Ton Charger Crane 6E Cupola, which is located at GM Powertrain Defiance, consists of a seven-and-a-half-ton capacity charging bridge crane, suspended above the ground, that moves along rails (which were part of a separate eFast ledger line) within a raw material bay at Powertrain Defiance. As part of the iron casting process, the asset picks up raw scrap metal from rail cars with a magnet and brings the metal to one of the

charging feeders for Defiance's cupolas. The asset was put into service in July 1997 and had an installed cost of \$639,653.

J. FIXTURE CLASSIFICATION AGREEMENTS BETWEEN THE PARTIES

114. The parties agree that Representative Asset No. 2, the Pits and Trenches at Lansing Delta Township, is a fixture.

115. The parties agree that Representative Asset No. 4, the ELPO Process Waste Lines at Lansing Delta Township, is a fixture.

116. The parties agree that a portion of Representative Asset No. 11, the CUC, consists of ordinary building materials, which are not fixtures.

117. The parties agree that the following components of Representative Asset No. 11, the CUC at Lansing Delta Township, are fixtures: (a) the utility piping in the CUC; (b) the hard electrical conduit in the CUC; (c) the air handling units; (d) a chilled water holding tank; (e) three batch wastewater holding tanks; and (f) a sludge holding tank.

118. The parties agree that the pits, trenches, and piping that are components of Representative Asset No. 23, the Aluminum Machining System, are fixtures.

V. ORDER OF PRESENTATION AT TRIAL

The parties have agreed that Defendants shall present their witnesses first at the Representative Assets Trial. To the extent that Plaintiff is calling a witness that Defendants are also calling, Plaintiff shall take its direct testimony of that witness immediately following or as part of its cross-examination.

The parties do not believe that opening statements are necessary in light of the pretrial briefs previously submitted to the Court. The parties will, however, be guided by the Court, and if the Court would find opening arguments helpful, the parties agree that such openings shall be no more than 30 minutes per side with Defendants offering any opening statement first.

The parties have agreed that Defendants will present their closing argument last.

Subject to the Court's approval, Defendants also believe that, in the interest of facilitating the clearest presentation of evidence to the Court, at the Representative Assets Trial the parties should first present each side's witnesses on the issues related to collateral identification (Issues to be Tried (a), (c), (d), and (e) in Section VII below), and then present each side's witnesses on the issues related to valuation (Issue to be Tried (b) in Section VII below). Plaintiff believes that the issues will be best presented without bifurcation, and propose Defendants present their case in full, followed by Plaintiff's case.

VI. PARTIES' CONTENTIONS

For purposes of the Representative Assets Trial, except as set forth herein, the pleadings are deemed amended to embrace the following, and only the following, contentions of the parties.⁴

A. DEFENDANTS' CONTENTIONS

1. Set forth is a brief statement of Defendants' contentions as to the ultimate issues of fact and law to be tried at the Representative Assets Trial, as set forth more fully in Defendants' Pretrial Brief (Dkt. No. 876):

Defendants' Contentions Regarding the Fixture Status of the 40 Representative Assets

⁴ For the reasons discussed below, Defendants do not consent to any amendment of Plaintiff's pleadings to raise any challenge to the perfection of Defendants' security interest in the fixtures at the Lansing Facilities. It is Plaintiff's position that, as set out below, the argument with regard to the Eaton County Fixture Filing falls squarely within the Amended Complaint.

The parties reserve all rights to raise any issue not addressed at the Representative Assets Trial following the Representative Assets Trial.

2. General Motors manufactures automobiles in massive plants that were constructed or extensively renovated to accommodate sophisticated machinery and equipment engineered and installed to work together in concert.

3. The 40 Representative Assets at issue in the Representative Assets trial were used by General Motors to do just that — work efficiently as part of integrated systems to produce automobiles.

4. General Motors designed its plants and processes to be flexible to changing designs, standards and consumer demand precisely to avoid having to move or replace fixed assets as its needs changed.

5. General Motors' automotive manufacturing machinery and equipment, including the Representative Assets, are generally so massive that it is generally impractical to move them, absent extraordinary circumstances.

6. The Representative Assets, like many of General Motors' manufacturing assets, were generally required to be firmly attached to the realty in order to function properly and safely.

7. Given these facts, assets like the Representative Assets were very rarely moved by General Motors — even in extraordinary circumstances — and even more rarely outside of extraordinary circumstances.

8. Under Michigan and Ohio law, property is a fixture if (a) it is annexed to the realty, whether the annexation is actual or constructive; (b) its adaptation or application to the realty being used is appropriate; and (c) there is an intention to make the property a permanent accession to the realty.

9. Under Michigan law, there is a presumption that assets that are attached by the owner of the land are intended to be permanent, and it is the intent of the owner at the time of installation that matters.

10. Under Michigan and Ohio law, permanence is not equated with perpetuity, and it is sufficient if an asset is intended to remain where affixed until worn out, until the purpose to which the realty is devoted is accomplished, or until the asset is superseded by another asset more suitable for the purpose.

11. Defendants' contentions with respect to the fixture test are discussed in detail in Defendants' Pretrial Brief.

12. The evidence at the Representative Assets Trial will show that 38 of the Representative Assets are fixtures, and that the two other Representative Assets have components that are fixtures.

13. In particular, the evidence will show that Representative Assets 1-10, 12-36, and 38-40 are fixtures. As noted above, the parties have stipulated that Representative Asset No. 2 and Representative Asset No. 4 are fixtures, and that Representative Asset No. 23 is partly a fixture (Defendants contend it is entirely a fixture).

14. In addition to those 38 Representative Assets, with respect to Representative Asset 11 (the LDT Central Utilities Complex), the parties have stipulated that a number of components are fixtures. Defendants also contend that additional non-building components of Representative Asset 11 are also fixtures, including: (a) a number of liquid pumps; (b) the electrical power distribution system; (c) the compressed air system; (d) the chilled water system; (e) the hot water system; (f) the water treatment system; and (g) the wastewater treatment system.

15. Finally, with respect to Representative Asset 37, the Courtyard Enclosure at Warren Transmission, Defendants contend that certain non-building components of the asset are fixtures, including: (a) dock doors and levelers; (b) hot water tanks; (c) lighting transformers; and (d) the fire safety system.

16. Defendants' contentions as to whether the 40 Representative Assets are fixtures and what their value is are summarized in the chart after the next section below.

17. The Court should reject the fixture approach advanced by Plaintiff and its expert, Mr. Goesling, which is contrary to numerous Michigan and Ohio cases. Applying Plaintiff's approach, virtually none of the machinery and equipment installed in GM plants for the purpose of manufacturing automobiles would be fixtures, and the only assets that Plaintiff would classify as fixtures would have no value at all if removed from the plant. This is contrary to Michigan and Ohio cases holding that assets similar or identical to the Representative Assets are fixtures.

Defendants' Contentions Regarding the Valuation of the Representative Assets

18. The Representative Assets should be valued "in light of the purpose of the valuation and of the proposed disposition or use of such property" 11 U.S.C. § 506(a)(1).

19. The proposed disposition of 38 of the Representative Assets as of the June 30, 2009 Valuation Date was to be sold in the 363 Sale from Old GM to New GM for continued use, in place, in manufacturing automobiles.

20. The actual disposition of those same 38 Representative Assets was their sale in the 363 Sale from Old GM to New GM for continued use, in place, in manufacturing automobiles.

21. Old GM's financial advisor, Evercore, estimated the total purchase price paid by New GM to Old GM in the 363 Sale to be between \$91.2 and \$93.6 billion.

22. The 363 Sale was an arm's length transaction that provided fair consideration to Old GM and was intended to preserve the going concern value of the GM enterprise, as recognized by GM, its advisors, the Court and the Creditors' Committee.

23. In the context of a post-bankruptcy asset sale like the 363 Sale, going concern value is applied to assets that are sold in bankruptcy as part of the business of a going concern.

24. Given the proposed disposition of 38 of the Representative Assets, going concern value should be used to value those 38 Representative Assets.

25. The best, indeed, a conservative, measure of going concern value for the Representative Assets sold to New GM is the Replacement Cost New Less Depreciation ("RCNLD") value assigned by KPMG to 34 of the Representative Assets in its contemporaneous "fresh start" valuation.

26. An alternative, acceptable measure of going concern value for the Representative Assets sold to New GM, and the best measure of going concern value for the 4 such Representative Assets KPMG did not value, is the fair market value in continued use at which Defendants' expert, Carl Chrappa, appraised those assets.

27. As of June 30, 2009, the proposed disposition of Representative Asset 30, the TP-14 Press, and of Representative Asset 29, the GG-1 Press, was to remain with Motors Liquidation Company as part of closed or closing plants, and to be liquidated.

28. Given the proposed disposition of these two Representative Assets, orderly liquidation value should be applied to value these two assets.

29. The best measure of orderly liquidation value for these two assets is the orderly liquidation value at which Defendants' expert, Carl Chrappa, appraised those assets.

30. Defendants' contentions as to the value and fixture status of each of the 40

Representative Assets are summarized in the chart immediately below.

Summary Chart of Defendants' Contentions Regarding Fixtures and Valuation

Rep. Asset #	Asset Description	Fixture Status of Asset	KPMG RCNLD Value	Chrappa Appraised Value
1	OP-150 Shims Station	Yes	207,000	345,000
2	Pits & Trenches	Yes	2,440,890	2,285,000
3	Power Zone Conveyor	Yes	553,000	825,000
4	Electro-Coat Paint Operations ("ELPO") Waste System	Yes	989,600	890,000
5	Paint Circulation Electrical System	Yes	1,482,270	1,745,000
6	ELPO Oven Conveyor	Yes	964,420	930,000
7	Paint Top-Coat Software	Yes	61,400	145,000
8	General Assembly Paint Mix Room	Yes	636,000	750,000
9	Paint Top-Coat Bells	Yes	2,188,200	2,270,000
10	Opticell Robotic System	Yes	n/a	420,000
11	LDT Central Utilities Complex	In Part	51,210,000	64,770,000
12	Overhead Body Shop Welding Robot	Yes	19,210	18,100
13	Weld Bus Ducts	Yes	3,220,000	3,750,000
14	Leak Test Base Machine	Yes	629,000	810,000
15	Soap, Mount and Inflate System	Yes	1,402,500	1,715,000
16	Skid Conveyor	Yes	2,172,600	2,290,000
17	Power and Free Conveyor	Yes	1,439,520	1,445,000

Rep. Asset #	Asset Description	Fixture Status of Asset	KPMG RCNLD Value	Chrappa Appraised Value
18	Vertical Adjusting Carriers	Yes	3,579,400	3,600,000
19	Full Body Coordinate Measurement Machine (CMM)	Yes	274,000	285,000
20	Wheel & Tire Conveyor	Yes	1,000,100	970,000
21	Final Line Skillet Conveyor	Yes	1,287,000	1,235,000
22	Fanuc Gantry Robot	Yes	126,000	190,000
23	Aluminum Machining System	Yes	862,000	1,475,000
24	Base Shaping Machine	Yes	533,300	810,000
25	Liebherr Hobb Machine	Yes	591,000	965,000
26	Core Delivery Conveyor System	Yes	90,400	100,000
27	Emissions System	Yes	2,820,300	3,130,000
28	Holding Furnace	Yes	1,211,100	1,515,000
29	GG-1 Transfer Press	Yes	n/a	930,000 (OLV)
30	TP-14 Transfer Press	Yes	n/a	500,000 (OLV)
31	Danly Tryout Press	Yes	n/a	880,000
32	AA Transfer Press	Yes	n/a	27,860,000
33	B3-5 Transfer Press	Yes	n/a	22,455,000
34	Build Line w/ Foundation	Yes	142,000	100,000
35	Button Up Conveyor System	Yes	1,370,800	2,005,000
36	Helical Broach	Yes	653,430	1,080,000
37	Courtyard Enclosure	In Part	211,720	410,000

Rep. Asset #	Asset Description	Fixture Status of Asset	KPMG RCNLD Value	Chrappa Appraised Value
38	Gas Cleaning System	Yes	69,000	0
39	Core Box Robot	Yes	n/a	n/a ⁵
40	Charger Crane	Yes	114,000	160,000

**Defendants’ Contentions Regarding the Capital Lease Asset, Representative
Asset No. 11, the Central Utilities Complex at Lansing Delta Township**

31. The components of the CUC that meet the “fixture” test, as discussed above, were assets in which Defendants had a security interest under the Term Loan Agreements, notwithstanding the existence of the CUC Agreements.

32. The CUC Agreements created a financing under which Old GM was the true or beneficial owner of the CUC and held a valuable residual interest in it.

33. Old GM’s residual interest and rights in the CUC are not excluded from the scope of the Term Lenders’ security interest by Article II, Clause (ii) of the Collateral Agreement. Article II, Clause (ii) of the Collateral Agreement excludes from the scope of the Term Lenders’ security interest any assets that are “subject to a Lien permitted under clause (vii) of Section 6.0[2](b) of the [Term Loan] Credit Agreement” where the agreement creating the lien prohibits the creation of additional liens on the asset.⁶ To the extent Old GM’s interest in the CUC was subject to a prior lien created by the CUC Agreements when the Term Loan was originated, such a lien was permitted by Section 6.02(b)(vii) of the Term Loan Credit Agreement. Moreover, the

⁵ The parties have agreed that they will not present evidence on the value of Representative Asset 39, the Core Box Robot, at trial.

⁶ Due to a scrivener’s error, Article II, Clause (ii) of the Term Loan Collateral Agreement refers to liens permitted under “clause (vii) of Section 6.01(b) of the Credit Agreement.” However, Section 6.01(b) of the Term Loan Credit Agreement does not contain a clause (vii).

CUC Agreements do not prohibit GM from granting a security interest in its interest in the CUC. Accordingly, pursuant to Article II of the Collateral Agreement, Old GM was free to grant, and did grant, the Term Lenders a security interest in the CUC, to the extent of its interest and rights in the CUC.

34. Old GM's residual interest and rights in the CUC are also not excluded from the scope of the Term Lenders' security interest by Article II, Clause (iii) of the Collateral Agreement. Clause (iii) excludes from the scope of the Term Lenders' security interest any "asset[] consisting of rights under a contract, agreement, instrument, or other document," where the granting of a lien would constitute a default under such agreement, instrument, or other document. However, because Old GM was the true owner of the CUC as of June 1, 2009, Old GM's interest in the CUC was not an "asset[] consisting of rights under a contract, agreement, instrument or other document." Even if Old GM's interest in the CUC is an "asset[] consisting of rights under a contract, agreement, instrument or other document," such grant of security interest was not prohibited by the CUC Agreements.

35. Clauses (ii) and (iii) of Article II of the Collateral Agreement therefore do not apply to the CUC.

36. Defendants further contend that even if Article II, Clauses (ii)-(iii) of the Collateral Agreement did apply to the CUC, the CUC would still not be excluded from the scope of the Term Lenders' security interest. Article II excludes certain property subject to legal or contractual restrictions on Old GM's ability to encumber it. However, Article II specifically provides that this exclusion does not apply where any such legal or contractual restriction is "ineffective under applicable law." Collateral Agreement, Art. II. Under sections 9-407 and 9-408 of the Michigan U.C.C., *see* M.C.L. §§ 440.9407, 440.9408, the contractual provisions in the

CUC Agreements purporting to restrict Old GM's ability to encumber the CUC are ineffective. Therefore the CUC is not excluded from the scope of the Term Lenders' security interest under Article II of the Collateral Agreement.

**Defendants' Contentions Regarding Plaintiff's Challenge to Defendants'
Security Interest in the Fixtures at the Lansing Facilities**

37. The Lansing Facilities are an integrated GM assembly plant that is commonly referred to at GM by the name, "Lansing Delta Township." The stamping and body shop areas of Lansing Delta Township share one large building on the site with no interior walls between the two areas. The paint shop and general assembly area are in two additional buildings, with all of the buildings connected by conveyors that automatically carry vehicle bodies from the stamping/body shop building, to the paint shop, and then to the general assembly building. All of the buildings are served by a single Central Utilities Complex that provides utility services to the entire Lansing Delta Township plant, including electrical power; hot, chilled and domestic water; treated water; steam, compressed air; and wastewater treatment.

38. Article II of the Term Loan Collateral Agreement granted the Defendants a lien on the fixtures at Lansing Delta Township. Both "GM Assembly Lansing Delta Township" and "GM MFD Lansing Regional Stamping" are expressly listed on Schedule 1 to the Term Loan Collateral Agreement. Plaintiff, however, contends that Defendants' lien was not perfected by the Eaton County Fixture Filing because the Eaton County Fixture Filing contains a metes and bounds description that corresponds to a vacant lot on the Lansing Delta Township property.

39. Because Plaintiff's contentions concerning the Eaton County Fixture Filing amount to an attempt to avoid Defendants' lien on the fixtures at Lansing Delta Township on the grounds that the Eaton County Fixture Filing failed to perfect that lien, Plaintiff bears the burden

of proof on its claim that the Defendants' lien on the fixtures at Lansing Delta Township is unperfected.

40. As noted above, Defendants first contend that Plaintiff's challenge to the perfection of Defendants' conceded security interest at Lansing Delta Township is time-barred, and therefore contest and do not agree to any amendment of Plaintiff's pleadings to raise that issue at this date.

41. Plaintiff has been on notice since filing its initial complaint in July 2009, and certainly no later than JPMorgan's answer to Plaintiff's initial complaint in 2010, that Defendants claim a perfected security interest in the fixtures at Lansing Delta Township based on a fixture filing made in the Eaton County, Michigan Register of Deeds office (the "Eaton County Fixture Filing," as defined above).

42. Any proceeding to challenge the priority of Defendants' lien on the fixtures at Lansing Delta Township was required to be raised in Plaintiff's complaint, with a claim distinctly alleging sufficient facts that, if proven, would show that Plaintiff was entitled to relief.

43. Plaintiff never raised a challenge to the perfection of Defendants' undisputed lien on the fixtures at Lansing Delta Township based on the Eaton County Fixture Filing in a complaint, as required by Federal Rule of Bankruptcy Procedure 7001(2).

44. Any such challenge to the perfection of Defendants' lien on the fixtures at Lansing Delta Township is now time-barred by both the Final DIP Order, as well as the two-year statute of limitations under 11 U.S.C. § 546(a).

45. Second, even if the Court finds that Plaintiff's challenge to the perfection of Defendants' lien on the fixtures at Lansing Delta Township is not time-barred, Plaintiff has not

met its burden of showing that Defendants' lien on the fixtures at Lansing Delta Township is unperfected.

46. The Eaton County Fixture Filing identified the Lansing Delta Township facility in bold-faced text.

47. The Eaton County Fixture Filing would have been identified by a diligent title searcher performing a title search on the Lansing Delta Township facility on June 1, 2009.

48. The Eaton County Fixture Filing therefore put third parties on actual, constructive, and inquiry notice of the Term Lenders' security interest in the fixtures at Lansing Delta Township, and thus perfected the Term Lenders' security interest in such fixtures.

Defendants' Contentions Regarding GM Powertrain Engineering Pontiac

49. The parties agree that, to the extent that Defendants held a security interest in the fixtures at GM Powertrain Engineering Pontiac under the Term Loan, Defendants' security interest in those fixtures was perfected as of June 1, 2009.

50. The Defendants were granted a security interest in the fixtures at GM Powertrain Engineering Pontiac pursuant to the Term Loan Agreements.

51. Article II(a) of the Collateral Agreement grants the Term Lenders a security interest in all fixtures located at "any plant or facility of [GM] listed on Schedule 1, including all related or appurtenant land, buildings, Equipment and Fixtures."

52. GM MFD Pontiac is a plant or facility of GM listed on Schedule 1.

53. The land on which GM Powertrain Engineering Pontiac is located is related to GM MFD Pontiac because, among other things, the facilities are next to one another, were mapped on the same tax parcel at all relevant times, and title to that shared parcel was transferred in a single deed of conveyance on multiple occasions.

54. GM Powertrain Engineering Pontiac and GM MFD Pontiac are also related because, among other things, they were both actually used by Old GM, the area of land on which both facilities are located has been treated by Old GM for decades as the “Pontiac Campus,” the two facilities shared a single central utility complex that provided utilities to both facilities, and GM treated the Pontiac Campus as a single unit in union negotiations.

B. PLAINTIFF’S CONTENTIONS

1. Set forth is a brief statement of Plaintiff’s contentions as to the ultimate issues of fact and law to be tried at the Representative Assets Trial, as set forth more fully in Plaintiff’s Pretrial Brief [Dkt. No. 903].

Term Lender Defendants

2. Set forth in Exhibit A are the Term Lenders whom Plaintiff contends received a postpetition transfer of funds on June 30, 2009.

**Plaintiff’s Contentions Regarding the Classification
and Value of Each Representative Asset**

3. The three-part fixture test followed in both Michigan and Ohio is a context-specific test that requires consideration of all of the relevant objective facts concerning each of the Representative Assets. Such a fact-based approach makes sense in light of the nature of fixtures: personal property that has become so “related to particular real property” as to become part of it. *See* N.Y. U.C.C. § 9-102(a)(41). Goods remain as personal property unless specific, objective facts about the relationship between the good and the realty suggest otherwise.

4. This Court should reject the bright-line approach advanced by Defendants as inconsistent with the approaches adopted by Michigan and Ohio courts. Under both Michigan and Ohio law, there is no short cut for concluding whether manufacturing machinery and equipment are fixtures.

5. In order to be classified as a fixture, an asset must meet all three prongs of the test: (1) annexation; (2) adaptation; and (3) intent to make the asset a permanent accession to the realty.

6. With respect to the third prong, which tends to be given the most weight, the annexor's intent to attach an asset permanently is determined based on objective facts and manifestations of intent, not the subjective or "secret" intent of the annexor. The pivotal question in fixture analysis is whether the party intended the assets to become "accessions" to the realty thereby allowing the interest in the assets to be merged with the interest in the realty, not whether the party intended to leave the asset physically in place.

7. Courts recognize that the test cannot be whether a company would like, at the time of installation, to keep the asset in service until the machine is obsolete or the plant ceases operation because the same statement could be made about any piece of equipment.

8. The following objective facts, among others, reveal Old GM's intent to treat most of the Representative Assets as personal property, not fixtures that are merged with the interest of the realty: (1) contemporaneous agreements, including leases, that show GM intended to keep assets as personal property; (2) GM's sale of similar assets as personal property on a bill of sale and separate from the realty; (3) GM's treatment of the Representative Assets as personal property for purposes of its tax filings; and (4) the attachment of the Representative Assets in such a way as to allow for their removal without damage and the actual removal or movement of the Representative Assets or similar assets.

9. Plaintiff's contentions with respect to each part of the test, including Ohio's approach to the adaptation prong of the test, are discussed in detail in Plaintiff's Pretrial Brief.

10. Below is a chart that summarizes Plaintiff's contentions regarding classification

of each Representative Asset as a fixture or non-fixture, as well as Plaintiff's values for each Representative Asset.

Rep. Asset #	Asset Description	Fixture Status	Value (\$)
1	Shim Select and Placement Machine	No	3,000
2	Pits & Trenches	Yes	0
3	Torque Converter Housing Conveyor System	No	3,000
4	ELPO Process Waste Lines	Yes	0
5	Paint Mix and Circulation Electrical System	No	152,000
6	ELPO IMC System	No	7,000
7	TC Automation Software	No	0
8	Paint Mix Room	No	82,500
9	Paint TC2 CC Bell Zone	No	263,400
10	OptiCell Measuring System	No	73,000
11	Central Utilities Complex	Yes/No	2,367,000 ⁷
12	BS Framing Robot	No	25,000
13	BS Weld Bus Duct	No	681,000
14	Leak Test System	No	9,000
15	Wheel Assembly Machine	No	59,000
16	BS Skid Conveyor	No	15,000
17	BS P&F Conveyor	No	24,000
18	Vertical Adjusting Carriers	No	59,000

⁷ Plaintiff's contended value includes the aggregated value of both the fixture and non-fixture components of Representative Asset No. 11.

Rep. Asset #	Asset Description	Fixture Status	Value (\$)
19	BS CMM	No	39,000
20	Wheel & Tire Delivery Conveyor	No	5,000
21	Skillet Conveyor System	No	1,000
22	Robot Gantry System	No	32,000
23	Coolant Filtration System	Yes/No	14,000 ⁸
24	CNC Gear Shaper	No	224,000
25	Gear Hobber	No	244,000
26	Core Delivery Conveyor System	No	1,000
27	Cupola No. 4 Emissions System	No	131,000
28	Ajax 100 Ton Holding Furnace	No	8,000
29	GGI Clearing Transfer Press	No	261,000
30	TP-14 Danly Transfer Press	No	800,000
31	Danly Tryout Press	No	276,000
32	Schuler Transfer Press	No	3,675,000
33	B3-5 Transfer Press	No	2,400,000
34	4 Speed Build Line	No	45,000
35	Button Up and Test Conveyor	No	2,000
36	Helical Broach	No	150,000
37	Courtyard Enclosure	No	0 ⁹
38	Gas Cleaning System	No	24,000

⁸ Plaintiff's contended value includes the aggregated value of both the fixture and non-fixture components of Representative Asset No. 23.

⁹ Because Representative Asset No. 37, the Courtyard Enclosure, is real estate, Plaintiff has not assigned a value to it.

<u>Rep. Asset #</u>	<u>Asset Description</u>	<u>Fixture Status</u>	<u>Value (\$)</u>
39	CB91 Unload Robot	No	N/A ¹⁰
40	P & H Charger Crane	No	10,000

Plaintiff's Contentions Regarding the Valuation of the Representative Assets

11. Plaintiff contends that the Representative Assets should be valued “in light of the purpose of the valuation and of the proposed disposition or use of such property, and in conjunction with any hearing on such disposition or use or on a plan affecting such creditor’s interest.” 11 U.S.C. § 506(a)(1) (2016).

12. Plaintiff contends that the proposed disposition of the Representative Assets was to be sold in the 363 Sale.

13. Plaintiff contends that the Representative Assets should be valued at their fair market value in the hands of the debtor, Old GM, as of June 30, 2009. Plaintiff contends that the fair market value of the Representative Assets is the amount Old GM would command for those assets in an open and competitive market as of the Valuation Date, which is the value of those assets in liquidation.

14. Plaintiff contends that valuing the Representative Assets in liquidation is consistent with § 506(a)(1) because it provides Defendants the highest actual market value for the Representative Assets in light of their proposed disposition.

15. Plaintiff contends that as of the Valuation Date, Old GM did not have value as a going concern. Old GM’s prepetition efforts to secure private financing to continue operations

¹⁰ The parties have agreed that they will not present evidence on the value of Representative Asset 39, the CB91 Unload Robot, at trial.

and its extensive efforts to sell its operations or to merge with another automotive manufacturer all failed. No commercial market participant was willing to pay any amount for Old GM's assets as part of a going concern. The only value that Old GM could obtain for its assets was through a liquidation, and it is on that basis that the Representative Assets are properly valued. No commercial actor would have paid more than the liquidation value to obtain the Representative Assets (or any assemblage of Old GM's assets) in the market because they were not worth anything more.

16. Plaintiff contends that the premise of value that would yield the highest actual market value for the Representative Assets is what appraisers refer to as "orderly liquidation value in exchange." This valuation premise is appropriate because, given the absence of a market for a sale of these Representative Assets as part of a going concern, their market value can only be determined by considering their value if they had been removed and sold in market transactions.

17. Plaintiff contends that the 363 Sale provides no basis for valuing the Representative Assets or the Surviving Collateral because it does not represent the fair market value of the assets. Old GM was kept alive only by virtue of an enormous Government subsidy, and it was only because of this subsidy that New GM was able to operate at all after the 363 Sale. That subsidy, included in the price paid by New GM in the 363 Sale, provided Old GM with benefits far in excess of the value of the assets purchased, and was determined based on the Company's needs rather than what the company's assets were worth. The Government bailout was predicated on the willingness of the Government to inject huge sums into a failing company to keep the U.S. economy intact, avoid exacerbating the financial crisis, avoid the loss of U.S. jobs, avoid the impact of an Old GM failure on the rest of the automotive industry, and to avoid

harming states and municipalities who relied on the automotive industry for revenue. These are motivations that no ordinary market participant would have.

18. New GM was able to continue as a going concern *only* because of the Government's enormous subsidy, and not because the Surviving Collateral had any value beyond liquidation value.

Plaintiff's Contentions Regarding Representative Asset No. 11

19. Plaintiff contends that Representative Asset No. 11 (Asset ID 100045909), the CUC, is not Surviving Collateral. This asset is subject to a capital lease and was not owned by Old GM as of June 1, 2009. Therefore, Old GM did not grant JPMorgan a security interest in the asset.

20. Plaintiff contends that any interests Old GM had in the CUC as of June 1, 2009 also is excluded from the grant of a security interest. Clause (iii) of Article II of the Collateral Agreement excludes assets that are assets consisting of rights under a contract where such contract prohibits the creation of additional liens on the asset. Plaintiff contends that any interests Old GM had in the CUC was as an asset consisting of rights under contracts. Plaintiff further contends that the CUC Agreements prohibit the creation of additional liens on the asset. Section 5.01(f) of the Tri-Party Agreement prohibits Old GM from creating a lien on any interest in the CUC. Section 7.01(g)(vi) of the LSA also prohibits the creation of liens on any interest in the CUC.

21. Plaintiff contends that even if the CUC was owned by Old GM as of June 1, 2009, it is excluded from the grant of a security interest by clause (ii) of Article II of the Collateral Agreement. Plaintiff further contends that any interest Old GM had in the CUC also was excluded from the grant of a security interest by clause (ii). Clause (ii) excludes assets that are subject to a lien permitted by Section 6.02(b)(vii) of the Term Loan Agreement, where the

agreement creating the lien prohibits the creation of additional liens on the asset. Plaintiff further contends that the CUC Agreements prohibit the creation of additional liens on the asset.

22. Plaintiff contends that even if Defendants had a security interest in the CUC, and even if they had a perfected security interest in the CUC, such interest is subordinate to GMAC's first-priority interest in the asset. As of June 1, 2009, GMAC had a perfected, first priority security interest in the CUC as a result of the filing of the Delta II Fixture Filing (filed before the Eaton County Fixture Filing) and the Delta II Continuation Statement.

**Plaintiff's Contentions Regarding Assets Located at
GM Powertrain Engineering Pontiac**

23. Plaintiff contends that Defendants do not have a security interest in fixtures located at the Powertrain Engineering Pontiac facility.

24. The Collateral Agreement excludes from the grant of collateral all "Equipment" and "Fixtures" that are not located at a "U.S. Manufacturing Facility." "U.S. Manufacturing Facility" is defined in pertinent part as the 42 facilities listed on Schedule 1 to the Collateral Agreement, including any "related or appurtenant" land, buildings, equipment and fixtures. Plaintiff contends that Powertrain Engineering Pontiac is not "related" or "appurtenant" to MFD Pontiac.

25. MFD Pontiac and Powertrain Engineering Pontiac have two different addresses and are located on opposite sides of the street. The street separating MFD Pontiac and Powertrain Engineering Pontiac is on a piece of land that Old GM deeded to the City of Pontiac, Michigan in 2008 to develop for public use. They do not share site entrances, parking lots, or security gates. Unlike, MFD Pontiac, Powertrain Engineering Pontiac is not a manufacturing facility. MFD Pontiac and Powertrain Engineering Pontiac do not share any operational functions, are not physically connected, have different testing facilities, and have different

storage areas. MFD Pontiac and Powertrain Engineering Pontiac do not share management, employees, human resources personnel, or plant managers.

**Plaintiff's Contentions Regarding Assets Located at the Lansing Delta
Township and Lansing Regional Stamping Facilities**

26. Plaintiff contends that there are no assets located at either the Lansing Delta Township Assembly or Lansing Regional Stamping facilities that are subject to a Fixture Filing.

27. Plaintiff contends that the Eaton County Fixture Filing does not cover any fixtures located at either the Lansing Delta Township Assembly or Lansing Regional Stamping facilities. The Eaton County Fixture Filing, on its face, does not pertain to either facility. Neither the address nor the metes and bounds description in the Eaton County Fixture Filing include the Lansing Delta Township Assembly plant or the Lansing Regional Stamping plant.

28. Nor does the description on the Eaton County Fixture Filing provide constructive notice to a bona fide purchaser that Defendants have a secured interest in either the Lansing Delta Township Assembly plant or the Lansing Regional Stamping plant. Plaintiff contends that the Eaton County Fixture Filing unambiguously refers to the empty lot (which was also owned by Old GM) as the covered collateral: It describes the covered collateral as "all fixtures located on the real estate described in Exhibit A," and Exhibit A contains the address and the metes and bounds description that match the empty lot.

29. Plaintiff contends that the stamp located below the metes and bounds and address description in Exhibit A to the Eaton County Fixture Filing appears to have been made by LandAmerica, the title insurance company that handled the Eaton County Fixture Filing. Plaintiff contends that the stamp represents an internal filing system for the title company and should be disregarded in this analysis. Plaintiff contends that the stamp does not contain the

legal, formal, or official name of either the Lansing Delta Township Assembly or the Assembly Lansing facilities.

30. Plaintiff contends that the Eaton County Fixture Filing was recorded in the real property records of the vacant lot and not the real property records of the Lansing Delta Township Assembly or the Lansing Regional Stamping facilities. If a bona fide purchaser searched the land records for the parcels where the Lansing Delta Township Assembly and the Lansing Regional Stamping facilities are located, the purchaser would not have uncovered the Eaton County Fixture filing.

31. Plaintiff contends that constructive notice, not inquiry notice, is the correct standard for notice.

32. Plaintiff contends that under either standard of notice (constructive or inquiry), the Eaton County Fixture Filing is insufficient to perfect a security interest at either the Lansing Delta Township Assembly or the Lansing Regional Stamping plants.

33. Plaintiff contends that even if the Court concludes that Defendants have a perfected security interest in the fixtures located at Lansing Delta Township Assembly, Defendants do not have a perfected security interest in the fixtures located at the Lansing Regional Stamping plant.

34. Plaintiff contends that it is not precluded from showing that Defendants did not have a perfected security interest in the fixtures located at the Lansing Delta Township Assembly or the Lansing Regional Stamping plants. The Final DIP Order provided that the Committee (and now the Trust) had automatic standing to bring actions challenging the perfection of first priority liens. In the Amended Complaint, Adv. Pro. Dkt. No. 91, Plaintiff asserts a claim that due to the termination of the Delaware Financing Statement, Defendants did not perfect their

first priority lien, and that they were entitled to be paid only to the extent of the value of any collateral as to which they can demonstrate a perfected first priority security interest. The argument with regard to the Eaton County Fixture Filing falls squarely within these borders: Plaintiff contends that no collateral is covered by the Eaton County Fixture Filing, and thus Defendants do not have a perfected first-priority lien with regard to any collateral at the Lansing Delta Township Assembly or the Lansing Regional Stamping facilities. The issues concerning the Eaton County Fixture Filing fall within Defendants' general burden to prove what is included in their surviving collateral.

VII. ISSUES TO BE TRIED

Pursuant to the Order Amending the August 17, 2015 "Order Regarding Discovery and Scheduling" to Provide for Proceedings Concerning Characterization and Valuation of Representative Assets, dated May 4, 2016 (ECF No. 547) (the "May 4, 2016 Order") and the Stipulation and Order Amending and Superseding Certain Prior Orders Regarding Discovery and Scheduling, dated December 2, 2016 (the "December 2, 2016 Order"), the following issues are to be tried at the Representative Assets Trial:

- a. Whether each of the 40 Representative Assets is a fixture.
- b. What principles should be applied in valuing the 40 Representative Assets, as of June 30, 2009, and what was the value of each Representative Asset as of June 30, 2009.¹¹
- c. Whether Representative Asset No. 11, the CUC, is a fixture in which the Defendants had a perfected security interest as of June 1, 2009;

¹¹ The parties have agreed that they will not present evidence on the value of Representative Asset 39, the Core Box Robot, at trial, and that the Court does not need to decide the value of Representative Asset 39.

- d. Whether Defendants had a perfected security interest in the fixtures at the Lansing Facilities as of June 1, 2009 and whether Plaintiff's challenge to the Defendants' security interest in the fixtures at the Lansing Facilities is time-barred;
- e. Whether Defendants had a perfected security interest in the fixtures at GM Powertrain Pontiac Engineering facility, as of June 1, 2009.

VIII. JOINT EXHIBITS

The parties Joint Exhibits are set forth in Exhibit B.

IX. DEFENDANTS' EXHIBITS

Defendants' Exhibits are set forth in Exhibit C.

X. PLAINTIFF'S EXHIBITS

Plaintiff's Exhibits are set forth in Exhibit D.

* * *

No exhibit not listed by Plaintiff or Defendants may be used at trial, except (a) for cross-examination purposes or (b) if good cause for its exclusion from the pretrial order is shown. Each side has listed all exhibits it intends to offer on its case in chief and the lists include each party's description of each exhibit.

All exhibits are pre-marked with each exhibit bearing a unique number, with the prefix PX for Plaintiff's exhibits, DX for Defendant's exhibits, and JX for joint exhibits.

Two copies of each exhibit will be delivered to Chambers on April 7, 2017, in accordance with the December 2, 2016 Scheduling Order.

The parties shall comply with the March 31, 2017 Stipulation and [Proposed] Order Permitting the Parties to File Trial Exhibits and Deposition Designations Under Seal (ECF 916)

regarding exhibits marked Confidential or Outside Attorneys' Eyes Only under the Amended Agreed Protective Order by a party or third party.

XI. STIPULATIONS AND OBJECTIONS WITH RESPECT TO EXHIBITS AND DEPOSITION DESIGNATIONS

Any objections not set forth herein will be considered waived, absent good cause shown.

Plaintiff's objections to Defendants' Exhibits are set forth in Exhibit C hereto, where applicable.¹²

Defendants' objections to Plaintiff's Exhibits are set forth in Exhibit D hereto, where applicable.

The parties stipulate to the admissibility of all designated deposition testimony (as discussed below) and all documents produced by parties or third parties in this litigation that are identified on the parties' exhibit lists, except that the parties do not waive:

- a. objections on grounds that the designated testimony and documents are irrelevant, incomplete, or cumulative;
- b. objections that are the subject of pending motions in limine and the responses thereto;
- c. objections to documents on hearsay-within-hearsay grounds, which all parties reserve the right to assert at trial; and

¹² Defendants note that Plaintiff has objected to a number of summary exhibits Defendants are submitting pursuant to FRE 1006 to avoid burdening the Court with the voluminous material underlying the summary exhibits. Defendants have listed documents that were used in compiling the summaries on a provisional exhibit list as set forth in Exhibit F. Defendants will provide the Court with these voluminous materials if Plaintiff's objection is not consensually resolved.

- d. all objections as to the following documents: PX0070, PX0199, PX0200, PX0201, PX204, PX207, DX-0083 through DX-0093, DX-136, DX-1017, and DX-1018.¹³

For the avoidance of doubt, this stipulation does not include expert reports, documents produced from expert files or expert work product that was produced in this litigation. To the extent that an exhibit is a summary exhibit under Rule 1006 of the Federal Rules of Evidence and is based on documents produced by parties or third parties in this litigation subject to this stipulation, the parties agree not to object to such summary exhibit on grounds precluded by this stipulation but reserve all other objections.

XII. DEFENDANTS' WITNESS LIST

Defendants intend to call the following witnesses in their case in chief at the Representative Assets Trial¹⁴:

- a. Martin Apfel
b. Don Benson

¹³ The foregoing stipulation also does not apply to any exhibits added by the parties after submission of the initial Joint Pretrial Order dated March 31, 2017. The parties' objections to such documents are reflected in the revised lists of Defendants' and Plaintiff's exhibits attached hereto as Exhibits C and D, respectively.

¹⁴ Plaintiff objects to the inclusion of Martin Apfel and Jay Ewing on Defendants' witness list. Those individuals from New GM, who Plaintiff understands are outside the Court's subpoena power, were not included in Defendants' Rule 26(a) disclosures and were not deposed. Defendants added these witnesses to their witness list yesterday evening.

Defendants respond that, on February 16, 2017, the parties agreed in writing to exchange "preliminary witness lists" "on a without-prejudice basis" on March 3, 2017, and then to "[e]xchange updates to witness lists" on March 30, 2017. Defendants complied with this express agreement. Defendants' addition of Messrs. Apfel and Ewing was in direct response to Plaintiff's overbroad Motions in Limine challenging the admission of the KPMG Fresh-Start Accounting, which were only filed on March 8, 2017 after the initial exchange of witness lists. On March 22, 2017, in the *Term Lenders' Memorandum in Opposition to Avoidance Trust's Motions to Exclude the KPMG Report et al.*, Defendants specifically

- c. John Buttermore
- d. Colleen Charles
- e. Carl Chrappa
- f. Daniel Deeds
- g. Jay Ewing
- h. Patrick Furey
- i. R. Glenn Hubbard
- j. Maryann Keller
- k. Abdul Lakhani
- l. James Marquardt
- m. Max Miller
- n. Ronald Pniewski
- o. Eric Stevens
- p. Randy Thayer
- q. John Thomas
- r. Steven Topping
- s. Donald Wannemacher
- t. J. Stephen Worth

identified Messrs. Apfel and Ewing as individuals who had provided information to KPMG used in the fresh start report, then stated expressly that “the Term Lenders are also prepared to call former GM employees who provided information to KPMG to address any objection that has not been overruled or resolved.”

- u. Any custodians of records or other witnesses necessary to qualify documents into evidence, if the parties cannot reach agreement on authentication or admissibility of particular exhibits.

Defendants intend to call the following additional witnesses by deposition designation at the Representative Assets Trial:

- a. Matthew Feldman
- b. Raymond Fulcher
- c. Albert Koch
- d. Robert Levy
- e. Jeff Niszcza
- f. Gregory Miocic
- g. G. Mustafa Mohaterem
- h. Sharon Sheremet
- i. Taso Sofikitis
- j. Richard Starzecki
- k. Jennifer Weigel

Defendants reserve the right to call any witness called by Plaintiff at trial. Defendants also reserve the right to call these, or other witnesses, in rebuttal to plaintiff's case in chief.

XIII. PLAINTIFF'S WITNESS LIST

Plaintiff intends to call the following witnesses in its case in chief at the Representative Assets Trial:

- a. John Buttermore
- b. John Crabtree

- c. Dan Deeds
- d. Richard Duker
- e. Daniel Fischel
- f. David Goesling
- g. Gordon Klein
- h. Max Miller
- i. Mike Regiec
- j. Randy Thayer
- k. Don Wannemacher
- l. Stephen Worth
- m. Any custodians of records or other witnesses necessary to qualify documents into evidence, if the parties cannot reach agreement on authentication or admissibility of particular exhibits.

Plaintiff intends to call the following additional witnesses by deposition designation at the Representative Assets Trial:

- a. Matthew Feldman
- b. Raymond Fulcher
- c. Albert Koch
- d. Robert Levy
- e. Jeff Niszcza
- f. Taso Sofikitis
- g. Jennifer Weigel

Plaintiff intends to submit the testimony of the following additional witnesses by declaration at the Representative Assets Trial, as stipulated by the parties:

- a. Harry Wilson

Plaintiff reserves the right to call any witness called by Defendants at trial.

* * *

The witnesses listed may be called at trial. No witness not identified herein, except for those subject to the reservations above, shall be permitted to testify on either party's case in chief, absent good cause shown.

The parties' designations of deposition testimony are attached hereto as Exhibit E, along with each party's objections to any such deposition testimony and the basis therefor.

The parties shall comply with the March 31, 2017 Stipulation and [Proposed] Order Permitting the Parties to File Trial Exhibits and Deposition Designations Under Seal (ECF 916) regarding designations marked Confidential or Outside Attorneys' Eyes Only under the Amended Agreed Protective Order by a party or third-party.

XIV. RELIEF SOUGHT

At the Representative Assets Trial, Defendants respectfully request a ruling from the Court that:

- a. The 40 Representative Assets are fixtures (except Representative Asset 11, the Lansing Delta Township CUC, which is in significant part a fixture, and Representative Asset 37, the Courtyard Enclosure, which is in part a fixture).
- b. The 38 Representative Assets sold by Old GM to New GM should be valued on a going-concern basis.

- c. The 34 assets valued by KPMG on a RCNLD basis should be valued in accordance with the RCNLD values established by KPMG as set out in “Defendants’ Contentions” above.
- d. The 4 assets that were not valued by KPMG on a RCNLD basis should be valued in accordance with the values established by Defendants’ expert, Carl Chrappa, as set out in “Defendants’ Contentions” above.
- e. The 2 Representative Assets that were not sold by Old GM to New GM should be valued on an orderly liquidation basis in accordance with the values established by Mr. Chrappa, as set out in “Defendants’ Contentions” above.
- f. Defendants had a perfected security interest in Representative Asset 11, the Lansing Delta Township CUC, notwithstanding the capital financing lease to which the CUC is subject.
- g. Plaintiff’s challenge to Defendants’ security interest in the fixtures at the Lansing Facilities is time-barred.
- h. In the alternative, Defendants’ security interest in the fixtures at the Lansing Facilities was perfected as of June 1, 2009.
- i. Defendants had a perfected security interest in fixtures at GM Powertrain Engineering Pontiac as of June 1, 2009.

At the Representative Assets Trial, Plaintiff respectfully requests a ruling from the Court that:

- a. The Representative Assets be classified in accordance with Plaintiff’s position as described in “Plaintiff’s Contentions” above.

- b. Any Representative Assets the Court determines are fixtures be valued in accordance with Plaintiff's expert valuation opinion based upon a liquidation value in exchange premise of value.
- c. Asset No. 11, the CUC, is not collateral for the Term Loan.
- d. There is no collateral in which Defendants had a perfected security interest at the GM Powertrain Engineering Pontiac facility.
- e. There is no collateral in which Defendants had a perfected security interest at the Lansing Delta Township Assembly facility and the Lansing Regional Stamping facility.

UNITED STATES BANKRUPTCY JUDGE

Exhibit C

UNITED STATES BANKRUPTCY COURT
SOUTHERN DISTRICT OF NEW YORK

----- X
::
In re: :: Chapter 11
:: Case No. 09-50026 (REG)
General Motors Corporation, *et al.*, ::
:: (Jointly Administered)
Debtors. ::
----- X

FINAL ORDER PURSUANT TO BANKRUPTCY
CODE SECTIONS 105(a), 361, 362, 363, 364 AND 507 AND BANKRUPTCY
RULES 2002, 4001 AND 6004 (A) APPROVING A DIP CREDIT FACILITY
AND AUTHORIZING THE DEBTORS TO OBTAIN POST-PETITION FINANCING
PURSUANT THERETO, (B) GRANTING RELATED LIENS AND SUPER-PRIORITY
STATUS, (C) AUTHORIZING THE USE OF CASH COLLATERAL AND (D)
GRANTING ADEQUATE PROTECTION TO CERTAIN
PRE-PETITION SECURED PARTIES

THIS MATTER having come before this Court by the motion dated June 1, 2009
(the “Motion”) of General Motors Corporation (“GM”) and its affiliated debtors in the above-
captioned cases, as debtors and debtors-in-possession (collectively with GM, the “Debtors”),¹
seeking, among other things, entry of a final order (the “Final Order”):

(i) Authorizing the Debtors, pursuant to sections 105, 362, 363 and 364 of
title 11 of the United States Code (the “Bankruptcy Code”), Rules 2002, 4001 and 6004
of the Federal Rules of Bankruptcy Procedure (the “Bankruptcy Rules”), and Rule 4001
of the Local Bankruptcy Rules for the Southern District of New York (the “Local
Bankruptcy Rules”), to enter into the Secured Superpriority Debtor-in-Possession
Credit Agreement, by and among GM, as borrower, and The United States Department of
the Treasury (“U.S. Treasury”) and Export Development Canada (“EDC”), as lenders

¹ The Debtors in these cases include: GM, Saturn, LLC, Saturn Distribution Corporation, and
Chevrolet-Saturn of Harlem, Inc.

(iii) Providing, pursuant to sections 364(c)(1) and 507(b) of the Bankruptcy Code, that all obligations owing to the DIP Lenders under the DIP Credit Facility shall be accorded administrative expense status in each of these cases, and shall, subject only to the Carve-Out (as defined below), have priority over any and all other administrative expenses arising in these cases; provided, however, that subsequent to the closing of the Related Section 363 Transactions (as defined in the DIP Credit Facility), claims against the Debtors' estates that have priority under Sections 503(b) or 507(a) of the Bankruptcy Code, including costs and expenses of administration that are attendant to the formulation and confirmation of a liquidating chapter 11 plan, whether incurred prior or subsequent to the consummation of the Related Section 363 Transactions (the "Old GM Administrative and Priority Claims") shall have priority over such obligations (up to the aggregate amount of \$950,000,000; provided, however, that any greater amount shall

only to (1) the Permitted Liens (as defined in the DIP Credit Facility), (2) the Carve-Out, (3) the adequate protection liens granted in connection with the Prepetition Revolving Credit Agreement pursuant to paragraph 6(b)(1)(x) of the Interim Order (the “**Prepetition Revolving Credit Agreement Order**”) Under 11 U.S.C. §§ 105, 361, 362, 363 and FED. R. BANKR. P. 2002, 4001 And 9014 (I) Authorizing Debtors to Use Cash Collateral, (II) Granting Adequate Protection to Prepetition Revolver Secured Parties and (III) Scheduling a Final Hearing Pursuant to Bankruptcy Rule 4001(B) (the “**Prepetition Revolving Credit Agreement Adequate Protection Liens**”), and (4) the adequate protection liens granted in connection with the Prepetition Term Loan Agreement pursuant to paragraph 5(b)(i) of the Interim Order (the “**Prepetition Term Loan Facility Order**”, and together with the Prepetition Revolving Credit Agreement Order, the “**Prepetition Revolving And Term Loan Orders**”) Under 11 U.S.C. §§ 105, 361, 362, 363 and FED. R. BANKR. P. 2002, 4001 and 9014 (I) Granting Adequate Protection to Term Loan Secured Parties and (II) Scheduling a Final Hearing Pursuant to Bankruptcy Rule 4001(B) (the “**Prepetition Term Loan Adequate Protection Liens**”, and together with the Prepetition Revolving Credit Agreement Adequate Protection Liens, the “**Prepetition Revolving And Term Adequate Protection Liens**”);

- (B) pursuant to section 364(c)(3) of the Bankruptcy Code, valid, perfected junior security interests in and liens on all Property that is subject to non-

avoidable, valid and perfected liens in existence as of the Petition Date, or to non-avoidable valid liens in existence as of the Petition Date that are subsequently perfected as permitted by section 546(b) of the Bankruptcy Code, subject only to the Carve-Out; and

(C) nothing in this Final Order, the Interim Order or the DIP Credit Facility shall in any way be construed to authorize or permit the DIP Lenders to seek recourse against the New GM Equity Interests at any time.

(v) Authorizing the application of a portion of the proceeds of the DIP Credit Facility toward payment in full of all principal, interest, letter of credit reimbursement obligations (including obligations to cash collateralize undrawn letters of credit) and other amounts due or outstanding under (A) that certain Term Loan Agreement, dated as of November 29, 2006, among GM, Saturn Corporation and JPMorgan Chase Bank, N.A., as administrative agent, and the lenders party thereto from time to time (as may be amended, restated, supplemented or otherwise revised from time to time, and together with all related agreements and documents, the “**Prepetition Term Loan Agreement**”) secured by a first-priority lien on certain Property (the “**Prepetition Term Loan Collateral**”), (B) that certain Amended and Restated Credit Agreement, dated as of July 20, 2006, among GM, General Motors of Canada, Limited (“**GMCL**”), Saturn Corporation, Citicorp USA, Inc., as administrative agent, and the lenders party thereto from time to time (as may be amended, restated, supplemented or otherwise revised from time to time, and together with all related agreements and documents, the “**Prepetition Revolving Credit Agreement**”) secured by a first-priority lien on certain Property (the “**Prepetition Revolving Credit Agreement Collateral**”), and (C) that certain Loan and

(vii) Granting to the Existing UST Secured Parties (as defined below), as adequate protection for the potential diminution in value of their respective liens on and security interests in Property, (A) a claim as contemplated by section 507(b) of the Bankruptcy Code (the “**Adequate Protection Claim**”), which Adequate Protection Claim shall have a priority immediately junior to the Super-priority Claim (as defined below) and pari passu with the super-priority claims granted under the Prepetition Revolving And Term Loan Orders, (B) liens on and security interests in the Property (the “**Adequate Protection Liens**”), only to the extent of and on account of any diminution in the value of the Existing UST Secured Parties’ interests in the Debtors’ interests in the Property on and after the Petition Date, which Adequate Protection Liens shall have a priority immediately junior to the DIP Liens on the Property, and (C) reimbursement by the Debtors of all reasonable expenses incurred in the course of these

-7-

A. On June 1, 2009 (the “**Petition Date**”), the Debtors each filed a voluntary petition under chapter 11 of the Bankruptcy Code in this Court, commencing these cases. The Debtors continue to manage and operate their businesses and properties as debtors in possession pursuant to sections 1107 and 1108 of the Bankruptcy Code. No trustee or examiner has been appointed in these cases; the United States Trustee appointed the Official Committee of Unsecured Creditors (the “**Committee**”) on June 3, 2009.

C. Need for Post-petition Financing. The Debtors have demonstrated a need for immediate and continuing access to post-petition financing pursuant to sections 363 and 364 of the Bankruptcy Code and Bankruptcy Rule 4001(c)(2). In the absence of this access, the Debtors will be unable to continue operating their business, causing immediate and irreparable loss or damage to the Debtors' estates, to the detriment of the Debtors, their estates, their creditors and other parties in interest in these cases. The Debtors do not have sufficient unrestricted cash

G. Waiver. Upon entry of this Final Order, each of the Debtors hereby forever releases, waives and discharges the Existing UST Secured Parties and DIP Lenders, together with their respective officers, directors, employees, agents, attorneys, professionals, affiliates, subsidiaries, assigns and/or successors (collectively, the “**Released Parties**”) from any

and all claims and causes of action arising out of, based upon or related to, in whole or in part, (i) the Existing UST Loan Agreements, (ii) any aspect of the prepetition relationship, or any prepetition transaction, between any Debtor, on the one hand, and any Released Party, on the other hand, or (iii) any acts or omissions by any or all of the Released Parties in connection with any prepetition relationship or transaction with any Debtor or any affiliate thereof including, without limitation, any claims or defenses as to the extent, validity, characterization, priority or perfection of the liens and security interests granted to any Existing UST Secured Parties pursuant to the Existing UST Loan Agreements, “lender liability” and similar claims and causes of action, any actions, claims or defenses arising under chapter 5 of the Bankruptcy Code or any other claims or causes of action. The waivers described in this paragraph were binding on the Debtors immediately upon entry of the Interim Order, and shall be binding upon the Committee or any other statutory committee and all other parties in interest sixty (60) days after entry of this Final Order if, prior to the expiration of such sixty (60) day period, the Committee or other party in interest has not commenced, or filed a motion with this Court for authority to commence, a proceeding asserting a claim or cause of action waived under this paragraph.

H. Notice. Due and proper notice of the Motion, the DIP Credit Facility, and the time and location of the Final Hearing has been provided in accordance with the Interim Order. Such notice was adequate and sufficient, and no other or further notice need be provided.

**BASED UPON THE FOREGOING FINDINGS AND CONCLUSIONS,
AND UPON THE MOTION AND THE RECORD MADE BEFORE THIS
COURT AT THE INTERIM HEARING AND THE FINAL HEARING,
AND GOOD AND SUFFICIENT CAUSE APPEARING THEREFOR, IT IS
HEREBY ORDERED THAT:**

1. The Motion is granted to the extent provided in this Final Order. All objections to the Motion heretofore not withdrawn or resolved by the Final Order are overruled

3. Upon execution and delivery of the DIP Credit Facility and entry of this Final Order, the Debtors' obligations under the DIP Credit Facility (including the Additional Notes) shall constitute final, valid and binding obligations of the Debtors, enforceable against each Debtor and its estate in accordance with the terms thereof. No obligation, payment, transfer or grant of security under the DIP Credit Facility or this Final Order shall be stayed, restrained, voided or recovered under any provision of the Bankruptcy Code (including section 502(d) of the Bankruptcy Code) or other applicable law, or shall be subject to any defense, reduction, setoff, recoupment or counterclaim.

-13-

USActive 16626814.10

-15-

notwithstanding anything to the contrary in this Final Order, the Interim Order or the DIP Credit Facility, the Permitted Liens shall include any valid, perfected, non-avoidable prepetition senior liens in any Property of the Debtors' estates (or non-avoidable valid liens in existence as of the Petition Date that are subsequently perfected only as permitted by section 546(b) of the Bankruptcy Code), including, but not limited to, valid, perfected, non-avoidable prepetition senior statutory and possessory liens, and recoupment and setoff rights. Further, nothing in this Final Order, the Interim Order or the DIP Credit Facility shall in any way impair the right of any claimant with respect to any alleged reclamation right or impair the ability of a claimant to seek adequate protection with respect to any alleged reclamation right; provided, however, that nothing in this Final Order, the Interim Order or the DIP Credit Facility shall prejudice any rights, defenses, objections or counterclaims that the Debtors, the DIP Lenders, any agent under the Prepetition Senior Facilities, the lender under the TARP Loan Agreement, the Committee or any other party in interest may have with respect to the validity or priority of such asserted liens or rights, or with respect to any claim for adequate protection; provided, further, that nothing in this Final Order, the Interim Order or the DIP Credit Facility shall in any way be construed to permit or authorize the DIP Lenders to seek recourse against the New GM Equity Interests at any time. Notwithstanding the foregoing, the DIP Liens shall be subject and subordinate to valid and enforceable liens of governmental units for personal property taxes, real property taxes, special taxes, special assessments, and infrastructure improvement taxes arising after the Petition Date to the extent that such liens of governmental units take priority over previously granted and perfected consensual liens or security interests in property of the Debtors under applicable non-bankruptcy law.

8. The Existing UST Secured Parties are hereby granted, pursuant to sections 361, 362, 363, 364 and 507 of the Bankruptcy Code, the Adequate Protection Claim and the Adequate Protection Liens with the priorities set forth in paragraph (vii) hereof, in each case to the extent of any diminution in the value of the relevant Existing UST Secured Party's interests in the Debtors' interests in the Property (including Cash Collateral) occurring on or after the Petition Date.

9. The Debtors are hereby authorized to use the Cash Collateral in accordance with the Initial Budget, until the DIP Lenders have exercised remedies as a result of an Event of Default under, and as defined in, the DIP Credit Facility.

10. The DIP Liens, the Super-priority Claim, the Adequate Protection Liens and the Adequate Protection Claim shall continue in any superseding case or cases for any or all of the Debtors under any chapter of the Bankruptcy Code, and such liens, security interests and claims shall maintain their priorities as provided in this Final Order. If an order dismissing any of these cases, pursuant to section 1112 of the Bankruptcy Code or otherwise, is at any time

entered, such order shall provide that (A) the DIP Liens, the Super-priority Claim, the Adequate Protection Liens and the Adequate Protection Claim shall continue in full force and effect, shall remain binding on all parties in interest in these cases, and shall maintain their priorities as provided in this Final Order, until all obligations of the Debtors under the DIP Credit Facility (with respect to the DIP Liens and the Super-priority Claim) and the Existing UST Loan Agreements (with respect to the Adequate Protection Liens and the Adequate Protection Claim) have been paid and satisfied in full. Notwithstanding the dismissal of any or all of these cases, this Court shall retain jurisdiction with respect to enforcing the DIP Liens and the Super-priority Claim and the DIP Lenders' rights with respect thereto, and the Adequate Protection Liens and the Adequate Protection Claim and the Existing UST Secured Parties' rights with respect thereto.

11. Except as provided in this Final Order or in the DIP Credit Facility, the DIP Liens, the Super-priority Claim, the Adequate Protection Liens and the Adequate Protection Claim, and all rights and remedies of the DIP Lenders, shall not be modified, impaired or discharged by the entry of an order or orders confirming a plan or plans of reorganization in any or all of these cases and, pursuant to section 1141(d)(4) of the Bankruptcy Code, each Debtor waives any discharge as to any remaining obligations under the DIP Credit Facility and this Final Order including, without limitation, the Additional Notes.

12. This Final Order shall be sufficient and conclusive evidence of the validity, perfection and priority of the DIP Liens and the Adequate Protection Liens, without the necessity of filing or recording any financing statement or other instrument or document, or the taking of any other act that otherwise may be required under state or federal law, rule, or regulation of any jurisdiction to validate or perfect the DIP Liens or the Adequate Protection Liens or to entitle the DIP Lenders and the Existing UST Secured Parties to the priorities set

-19-

paragraph 14 above, the DIP Lenders may compel any Debtor to exercise such Debtor's rights (if any) to sell any or all of the Property in its possession pursuant to section 363(b) of the Bankruptcy Code or any other applicable law, the DIP Lenders shall be entitled to exercise their right (if any) to credit bid the DIP Liens in any such sale pursuant to section 363(k) or other applicable provision of the Bankruptcy Code, or other applicable law, and the Debtors shall use best efforts (subject to applicable law) to exercise their rights (if any) to sell such Property if requested by the DIP Lenders (pursuant to section 363 of the Bankruptcy Code or otherwise).

16. As used in this Final Order, "**Carve-Out**" means, following the occurrence and during the continuance of an Event of Default under the DIP Credit Facility, an amount sufficient for payment of (A) allowed professional fees and disbursements incurred by professionals retained by the Debtors, the Committee and any other statutory committee (after application of all outstanding retainers held by those professionals) and allowed expenses of members of the Committee and any other statutory committee in an aggregate amount not to exceed \$20,000,000 (plus all such professional fees and disbursements, and expenses of members of the Committee and any other statutory committee that are unpaid after application of all outstanding retainers, and that were accrued or incurred prior to the occurrence of the Event of Default, to the extent allowed by this Court at any time), (B) fees pursuant to 28 U.S.C. § 1930 and any fees payable to the clerk of this Court, (C) fees and disbursements incurred by a chapter 7 trustee (if any) not to exceed \$2,000,000, and (D) fees and expenses incurred by a privacy ombudsman retained by Appointment of Ombudsman dated June 10, 2009 [Docket No. 565]; provided, however, that, so long as an Event of Default has not occurred, the Debtors shall be permitted to pay fees and expenses allowed and payable under 11 U.S.C. §§ 330 and 331, as the same may become due and payable, and the same shall not reduce the Carve-Out;

18. The DIP Lenders may exercise their right (if any) to credit bid the loans and the Additional Notes under the DIP Credit Facility (pursuant to section 363(k) or other applicable provision of the Bankruptcy Code, or other applicable law), in whole or in part, in connection with any sale or other disposition of some or all of the Property in these cases.

-22-

(c) The Prepetition Senior Facilities Secured Parties' liens, claims and interests in the Property and any adequate protection claims or adequate protection liens, shall expire upon the Payment. In the event that the Committee investigates any liens of any of the Prepetition Senior Facilities Secured Parties or any third party brings an action against a Prepetition Senior Facilities Secured Party that is entitled to indemnification by the Debtors under the applicable Prepetition Senior Facility, then, notwithstanding any other provision of this Final Order, (i) the Debtors shall pay (in accordance with Paragraph 6(d) of the Prepetition

dismisses such adversary proceeding. The grant of automatic standing shall be without any further order of this Court or any requirement that the Committee file a motion seeking standing or authority to file a motion seeking standing or authority before prosecuting any such challenge. Any Prepetition Senior Facilities Secured Party accepting Payment shall submit to the jurisdiction of the Bankruptcy Court, it being understood that the respective administrative and collateral agents for the Prepetition Senior Facilities shall have no responsibility or liability for amounts paid to any Prepetition Senior Facilities Secured Parties and such agents shall be exculpated for any and all such liabilities, excluding only such funds as are retained by each such agent solely in its respective role as a lender.

(e) Immediately upon Payment, the DIP Lenders shall be deemed to have obtained a secured, non-avoidable, perfected security interest in and lien on the Prepetition Senior Facilities Collateral.

20. Notwithstanding anything herein to the contrary, none of the proceeds of any extension of credit under the DIP Credit Facility shall be used in connection with (a) any investigation (including discovery proceedings), initiation or prosecution of any claims, causes of action, adversary proceedings or other litigation against the DIP Lenders or the Existing UST Secured Parties or EDC, in its capacity as lender under the Canadian Facility and on behalf of the Governments of Ontario and Canada, (b) the initiation or prosecution of any claims, causes of action, adversary proceedings or other litigation against the DIP Lenders or the Existing UST Secured Parties or EDC, in its capacity as lender under the Canadian Facility and on behalf of the Governments of Ontario and Canada, or any of their respective affiliates with respect to any loans, extensions of credit or other financial accommodations made to any Debtor prior to, on or after the Petition Date, or (c) any loans, advances, extensions of credit, dividends or other

25. The rights, benefits, and privileges granted pursuant to this Final Order (including, without limitation, the DIP Liens, the Super-priority Claim, the Adequate Protection

**STIPULATION AND
ORDER SETTING VALUATION DATE**

WHEREAS, on May 4, 2016, the Court entered an *Order Re Motion to Determine Valuation Date For Experts' Valuation of Assets* (ECF No. 548), requesting that counsel in this Action propose a briefing schedule for motions *in limine* “seeking a determination of the appropriate valuation date for the expert analysis and reports that will be prepared in this case”;

WHEREAS, on May 23, 2016, the Court entered a *Stipulation and Order Setting the Schedule for Motions In Limine Regarding the Valuation Date for the Surviving Collateral* (ECF No. 615) and set a briefing schedule for Plaintiff’s and Defendants’ Steering Committee’s cross-motions *in limine* as to the appropriate valuation date(s) for the Surviving Collateral for the Term Loan;

WHEREAS, counsel for Plaintiff and Defendants' Steering Committee have met and conferred regarding the appropriate valuation date; and

WHEREAS, an agreed-to valuation date is in the interest of the parties and the Court and will promote the just and efficient conduct of this litigation;

IT IS HEREBY STIPULATED AND AGREED, by and among counsel for the undersigned parties, as follows:

1. The parties will use June 30, 2009, the date the Term Loan was repaid in full, as the date as of which the Surviving Collateral will be valued; and

2. The foregoing paragraph does not preclude any party from putting forth evidence as to whether the May 27, 2009 transfers (Count III of the Amended Complaint (ECF No. 91)) are avoidable and recoverable in accordance with 11 U.S.C. § 547(b)(5).

1 THE COURT: You're not getting 150 assets, Mr.
2 Fisher.

3 MR. FISHER: Understood, Your Honor. And I would
4 never ask Your Honor to do 150 assets. But for discovery
5 purposes --

6 THE COURT: You're not going to do, at this stage of
7 the case, discovery on 150 assets.

8 MR. FISHER: And, Your Honor, the last point I'll
9 make on this, when you say this stage of the case, this issue
10 is fresh. It has not been addressed by any of the parties.
11 Discovery on this relatively new. It's not as though this
12 issue is all that mature, Your Honor.

13 THE COURT: That's one of the reasons I'm -- you're
14 not getting 150 assets to go litigate about. Okay.

15 MR. FISHER: And then, Your Honor, in terms of
16 valuating the assets separate and apart -- or at the same time,
17 as we have the classification fight, in terms of how
18 J.P. Morgan is going to approach valuation, they've said --
19 they've been clear in saying that they are going to start with
20 the fresh start accounting and then make various adjustments
21 upwards. Presumably, they then get to values that are in
22 excess of the sale price that the government paid for GM. But
23 regardless, I think there's still a question as to whether
24 there is -- you have to value the enterprise in order to drill
25 down to the assets or not.

1 And so I'm just not sure whether it's realistic to
2 value 20 assets or 40 assets or 15 assets and make inferences
3 from that about the larger value questions in the case.
4 Ultimately, that's something that our experts will have to
5 determine. And all we were urging in our case management
6 order, we actually proposed to get to fixture classifications
7 sooner --

8 THE COURT: I hear you. I know you do.

9 MR. FISHER: -- than JPMorgan. And we were simply
10 saying that otherwise, there are big, complicated valuation
11 issues.

12 THE COURT: This case is not going to get resolved in
13 any reasonable period of time if the fixture determination and
14 the valuation principles are not resolved reasonably promptly.
15 Reasonably promptly in this context doesn't mean, you know,
16 three or six months from now. It just -- I understand that
17 this could be complicated, but I believe that both what's a
18 fixture and how you value the fixtures needs to be resolved
19 fairly quickly to get this case resolved. Okay? You know, if
20 -- the defendants potentially take a big risk if they rely on
21 New GM's fresh start accounting as the valuation if I wind up
22 rejecting that as the methodology for value. But if they
23 haven't presented some persuasive alternative, they may be --
24 may have a real problem. Sometimes those issues get teed up as
25 Daubert motions, sometimes not. I'm not determining that now.

1 They bear the bigger risk on that than you are.

2 MR. FISHER: Understood, Your Honor. And I think
3 that we share the goal of trying to expedite resolution of this
4 case. I think that both the fixture classification issue and
5 the valuation issue have important roles to serve there, and
6 although we reject the KPMG values as appropriate, obviously
7 for valuation purposes --

8 THE COURT: It may be that it's admissible, I don't
9 know. I mean, it may be that it's admissible. It may or may
10 not be admissible, but even if it's admissible, it isn't
11 necessarily persuasive. It just --

12 MR. FISHER: But I think, Your Honor, we've been -- I
13 think both sides, in terms of thinking about where do we go --

14 THE COURT: Do you have any case law that says that
15 the fresh start accounting is not an appropriate valuation
16 methodology? I mean, you've talked to your experts, I'm sure.
17 Is there anything in the literature, professional literature,
18 that would suggest it is or it isn't appropriate?

19 MR. FISHER: I think in the professional literature,
20 there is much that says that it's not appropriate. And I think
21 KPMG itself disclaimed its use for that purpose.

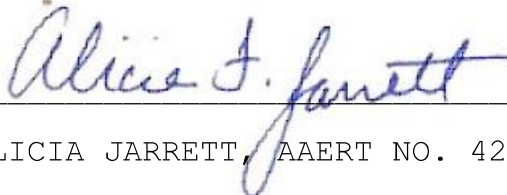

22 THE COURT: Yes, I remember you told me about that
23 before.

24 MR. FISHER: So, Your Honor, I realize that you only
25 have so much patience for this issue.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

vs.

GENERAL MOTORS CORP., et al.

Debtors.

Chapter 11 Case No.

09-50016 (RCS)

Jointly Administrated

DECLARATION OF HARRY WILSON

I am an employee of the United States Department of the Treasury ("Treasury"), and serve as a senior member of the working group (the "Auto Team") implementing the policies of the Presidential Task Force on the Auto Industry, an inter-agency task force created at the direction of the President of the United States earlier this year. I have served in this role since March 2009. Prior to this, I did not have public sector experience. I

received the opportunity to join the Auto Team after I sent an e-mail detailing my background to a prospective advisor to the Auto Team. I had decided to consider a potential position on the Auto Team because I felt the massive dislocation in the U.S. automotive industry created an important public policy matter and because I felt my private sector experience and skill's could be a valuable addition to a team seeking to address these issues. I do not anticipate remaining with Treasury after the Auto Team's work is complete.

2 I submit this declaration in support of General Motors' ("GM") Motion for Sale of Property under Section 363(b) Debtors' Motion Pursuant to 11 U.S.C. §§ 105, 303(b), (d), (h), and (m), and 363 and Fed. R. Bankr. P. 2902, 6004, and 6005, to (a) Approve (i) the Sale Pursuant to the Master Sale and Purchase Agreement with Vehicle Acquisition Holdings LLC, A U.S. Treasury-Sponsored Purchaser, Free and Clear of Liens, Claims, Encumbrances, and Other Interests; (b) the Assumption and Assignment of Certain Existing Contracts and Unexpired Leases; and (c) Other Relief; and (d) Schedule Sale Approval Hearing Docket No. 92.

3 Except as otherwise indicated, all facts set forth in this Declaration are based upon my personal knowledge and experience as a member of the Auto Team, my discussions with members of GM's senior management or other interested parties, and my review of relevant documents. Pursuant to this Court's Case Management Order, this declaration constitutes the direct testimony I would give if called to testify.

4 Most recently before joining the Auto Team, I was a general partner at Silver Point Capital, a multi-strategy investment fund managing several billion dollars in equity capital. My responsibilities at Silver Point included overseeing a number of operational and financial restructurings as well as investing in and working with troubled companies. Prior to

Joining Silver Point, I worked at a variety of financial firms including Goldman Sachs & Co. and The Blackstone Group. I do not have any agreements, explicit or implicit, with any other entity that I will work for it after I resign from government service.

4. I am a graduate of Harvard Business School and Harvard College.

5. My responsibilities as a senior member of the Auto Team consist primarily of (a) generally overseeing the financial and business strategies of the various companies in our portfolio and (b) specifically leading the Auto Team's day-to-day efforts with respect to GM.

6. The United States of America – acting through Treasury and its Auto Team – has implemented various programs to support and stabilize the domestic automotive industry. Those programs have included, among other things, providing credit support for receivables issued by certain domestic automobile manufacturers, and support for consumer warranties.

7. Treasury has also provided direct loans to automobile manufacturers. In late 2008, GM requested a loan from Treasury. Following some lengthy negotiations, Treasury determined to make available to GM billions of dollars in an emergency secured loan to enable GM to avoid a chaotic “fire-sale” liquidation while it developed a new business plan. I understand that when Treasury first extended credit to GM in December 2008 under the emergency secured loan, there was no other lender willing to loan to GM on such a condensed time frame and taking into account GM's available collateral.

8. Treasury and GM entered into a loan and security agreement on December 14, 2008 (the “LSA”), which provided GM up to \$12.5 billion in term financing on a secured, delayed draw basis. Under the LSA, GM immediately borrowed \$4 billion, followed by \$5.4

billion less than a month later, and the remaining \$4 billion on February 17, 2009. The LSA required GM to submit by February 17, 2009, a proposed business plan to demonstrate its future competitiveness that went significantly farther than the one GM had submitted to Congress in late 2008. Among other initial conditions on Treasury's willingness to lend, GM was to demonstrate its long-term viability by reducing its outstanding public bond debt (approximately \$27 billion) by two-thirds, and converting from cash to common stock at least half of the value after paying \$20 billion contributed to a union health care trust.

GM has only sought the emergency financing from Treasury under Treasury's Troubled Asset Relief Program ("TARP"). As contrasted with other TARP transactions that involve Treasury making direct investments in troubled companies in return for common or preferred equity, Treasury structured the GM transactions as a loan with the only equity involved by Treasury being in the form of warrants described below. The LSA between Treasury and GM had terms and covenants of a loan rather than an equity investment (although many of the terms and covenants were more lenient or favorable than "market terms"). Treasury also entered into intercreditor agreements with GM's other senior lenders in order to set forth the secured lenders' respective priorities. Treasury received first liens on GM's and its subsidiaries' equity interests in their respective domestic subsidiaries (other than certain domestic subsidiaries expressly excluded because of regulatory, contractual or practical prohibitions to a pledge thereof) and certain of their respective foreign subsidiaries (limited in most cases to 65% of the equity interests of the pledged foreign subsidiaries), intellectual property, real estate (other than manufacturing plants or facilities), inventory that was not pledged to other lenders, and cash and cash equivalents. Treasury also received second liens on certain additional collateral. The

A copy of the Intercreditor Agreement is attached hereto as Exhibit A.

LBA had separate collateral documents, which included: (i) a guaranty and security agreement, (ii) an equity pledge agreement and (iii) an intellectual property pledge agreement. The LBA loans were interest-bearing with a rate equal to 3.00% over the 3-month LIBOR with a LIBOR floor of 2.00%. The Default Rate on this loan was 3.00% above the non-default rate. In connection with this loan, Treasury also received warrants to purchase equity in GM. These warrants were in addition to, and distinct from, the secured debt and are separately documented.

11. In connection with GM's loan requests from Treasury, GM submitted a "viability plan" on February 17, 2009, which outlined a number of steps it intended to take to make itself more competitive, including an operational turnaround. The Auto Team reviewed and analyzed that plan and found, after a total consideration of all relevant factors taken as a whole, that GM's plan was not adequate. A copy of the "Viability Determination" dated March 22, 2009, is attached hereto as Exhibit B. On March 30, 2009, President Obama announced publicly that GM's efforts to develop a long-term viability plan had fallen short and that the advancement of any additional federal loans to GM beyond the subsequent sixty-day period would require a substantially more aggressive effort to map out a clear path to long-term viability. GM was free, however, to seek funding from any entity other than Treasury on any terms it could negotiate. The Auto Task Force did not restrict GM from seeking alternative funding. In fact, at no point did the Auto Task Force or Treasury require that GM accept funding from the government or prohibit GM from seeking equity funding or loans from other sources, and on a number of occasions I made clear to GM management that the Auto Team and Treasury would prefer to see GM develop a private sector financing solution, if at all possible. The Auto Team has also done nothing to prevent GM from seeking strategic relationships with other automobile manufacturers or other willing partners. The funds advanced to GM under the LBA –

approximately \$19.6 billion in total, as of the petition date (all on a secured basis)³ – were critical to GM's survival during the past several months. They are equally critical to GM's survival today.

3. Treasury, the Auto Task, GM, a variety of stakeholders including holders of GM's unsecured debt instruments and the United Auto Workers (the "UAW") worked extensively to achieve a comprehensive out-of-court overhaul of GM's finances and cost structure. These and other efforts are detailed in the First Day Affidavit of Frederick Henderson. [Docket No. 3]. Simultaneously with these efforts, GM and Treasury also considered the possibility that GM would be unable to meet its needs other than through a chapter 11 filing. Although it was not Treasury or GM's first choice, it ultimately became clear that the only viable course was for GM to pursue – with the support of Treasury, the Government of Canada, and other commitments – a transaction under section 363(b) of chapter 11 of title 11 of the United States Code (the "363 Transaction").

4. There are several critical reasons why the 363 Transaction is necessary on the time-frame proposed to the Court in these cases, including (a) it will permit New GM (as defined below) to begin manufacturing automobiles as quickly as possible, (b) it will reduce the amount of money Treasury is being asked to lend and (c) most importantly, a rapid emergence from bankruptcy creates the highest probability of avoiding the catastrophic and expensive meltdown in GM also asks that virtually all industry observers predicted would happen in the event of a GM bankruptcy filing. It is Treasury's belief that only a rapid and certain emergence from bankruptcy can provide consumers the confidence necessary to make a major purchase like

³ Treasury and GM entered into amended credit agreements to provide for an additional \$3 billion in financing that GM borrowed on April 22, 2009, and another \$4 billion that GM borrowed on May 25, 2009.

an automobile. Importantly, Treasury cannot make an open-ended commitment to GM that Treasury will continue to fund GM's operations if GM's critical assets languish in the bankruptcy process.

14 The details and documentation of the 363 Transaction were negotiated at arm's length between Treasury and its advisors and GM and its advisors. GM had numerous independent advisors that it selected without any input from the government. These advisors included experienced counsel, restructuring experts, and investment bankers.

15 In the spring of 2009, Treasury and GM began negotiating the Master Sale and Purchase Agreement (the "MSPA"). For approximately one month, Treasury and GM and their respective counsel engaged in sometimes contentious arm's length negotiations. Negotiations between Treasury and GM commenced with the term sheets to the MSPA provided by GM on or about May 1, 2009, and continued with subsequent rounds of discussions regarding the specific language of the MSPA through its execution on June 1, 2009.

16 Throughout the spring of 2009, GM and Treasury, as well as the UAW and the UAW VRBA, the Debtors' creditors secured lenders, certain of the Debtors' prepetition unsecured lenders, and Treasury's Canadian co-investors engaged in negotiations over the terms of the sale and related issues including financing. These negotiations continued through the Debtors' bankruptcy filings on June 1, 2009 (the "Petition Date"), and beyond. During the period from May 12 through June 1, the parties engaged in nearly around the clock negotiations at GM's New York headquarters and the office of their counsel. Since the Petition Date, the negotiations have expanded to include the Debtors' statutory committee of unsecured creditors and other interested parties, and Treasury, as purchaser, has made certain concessions to those parties in the course of those negotiations.

13. On the day GM filed for bankruptcy, GM, Treasury and Export Development Canada (the "EDC") sought court approval of a Secured Superpriority Debt-in-Possession Credit Agreement (the "DIP Facility"). Negotiations with respect to the DIP Facility went on simultaneously with the MSFA and under similar circumstances. The additional funding under the DIP Facility was and is critical for GM to avoid a value-destroying "free-fall" liquidation. The Bankruptcy Court approved the DIP Facility, on an interim basis, on June 3, 2009 in the amount of \$15 billion. (Docket No. 191). The total availability under the DIP Facility is \$15.3 billion. The DIP Facility terms, covenants, collateral and priority are similar to the analogous provisions in the LSA in many respects. The non-default rate for Eurodollar loans is the sum of (a) the greater of (i) the LIBOR rate for the period of the applicable loan, adjusted for certain reserve requirements, and (ii) 2.00%, plus (b) 3.00%. The default interest rate, if applicable, is the otherwise applicable non-default rate plus 5.00%. At Treasury's sole discretion, the otherwise applicable non-default rate may be the rate of interest applicable to ABR loans plus 2.00%. The Bankruptcy Court issued a final order on June 23, 2009, approving the DIP Facility.

14. Prior to the closing of the proposed sale, Treasury will own 100% of NUMCO, Inc. ("New GM") - a newly created Delaware Corporation incorporated for the purpose of acquiring certain assets of GM through the 363 Transaction. To purchase substantially all of the assets of GM, New GM will credit bid the claims of Treasury under the secured DIP Facility (except for the \$1,072,428,605 associated with the exit financing and the \$950 million associated with the wind down fund described below), in addition to all claims of Treasury under the secured LSA. New GM's credit bid far exceeds the value of all of the assets of GM, which has a liquidation value as determined by AlixPartners, LLP ("AlixPartners") of

between \$6.5 billion and \$9.7 billion. I have no reason to dispute the AlliePartners valuation. That valuation demonstrates that Treasury's credit bid far exceeds the value attainable in a GM liquidation, the only other option available to the company.

19 As a purchaser seeking to buy assets that will enable New GM to be as competitive as possible, New GM negotiated the 363 Transaction to limit to the maximum extent its successor liabilities, as advised by counsel. New GM has only voluntarily assumed liabilities where it sees a necessary and compelling business purpose for doing so.

20 Pursuant to the terms of the MSRA, New GM will allocate 17.5% of its common equity on an undiluted basis to a new Voluntary Employee Beneficiary Association formed pursuant to an agreement between New GM and its unionized work force (the "New VEBA"). That equity stake is being given to the UAW on account of the value that the UAW will provide to New GM in its efforts to compete effectively in the auto industry. New GM views the UAW's skilled workforce as essential to its future operations and engaged in negotiations to reach a revised collective bargaining agreement, which includes an agreement on the New VEBA. It would be impossible for New GM to operate without a skilled workforce. If the UAW failed to cooperate with New GM post-transaction, there would be no functioning company. The equity stake was not intended to be - and is not in form or substance - a distribution on account of any claims the UAW may have in GM's chapter 11 cases.

21 New GM will also allocate 14% of its equity on an undiluted basis to Old GM's bankruptcy estate as part of the 363 Transaction.³ Additionally, in the event that the Bankruptcy Court determines that the estimated amount of allowed prepetition general unsecured

³ After these voluntary equity allocations, Treasury will own approximately 61% of New GM and BDC will own approximately 11.5% of New GM.

claims against the Debtors exceed \$35 million, then New GM will receive, on a sliding scale, up to 2% of its equity in Old GM as part of the 363 Transaction. Finally, New GM will have warrants to purchase up to 15% of the shares of common stock of New GM, with the initial exercise prices of \$30.00 and \$55.00 per warrant, subject to certain adjustments. The warrants will be exercisable through the seventh and tenth anniversaries of issuance, respectively, and New GM can elect partial and cashless exercises. This equity allocation will be distributed by GM as part of any chapter 11 plan that is ultimately confirmed by the Bankruptcy Court. Treasury has not directed how the equity will be allocated among GM's existing creditors.

21 Upon closing of the 363 Transaction, New GM will assume \$7,472,458,505 of the debt provided to Old GM under the DIP loan in an amended and restated credit agreement. When the extended financing is transferred to New GM, this financing, combined with the new CBA between New GM and the CAW and other cost-saving measures undertaken in connection with Old GM's chapter 11 cases, will enable New GM to provide adequate assurance of future performance to parties who have had their contracts assumed by Old GM and assigned as part of the 363 Transaction.

22 Finally, in addition to the allocation of equity to Old GM's estates as part of the 363 Transaction, Treasury is providing a substantial amount of money to Old GM to wind down its estates. Pursuant to the terms of the DIP Facility, Treasury will provide the Debtors with \$950 million to wind-down the Debtors' estates after completion of the proposed 363 Transaction. The \$950 million will permit Old GM to wind its estates down in an appropriately-funded manner, pay reasonable professional fees, dispose of assets left behind in the estates, and ultimately to confirm a chapter 11 plan that permits Old GM to distribute a percentage of the equity in New GM. Any amounts remaining will ultimately revert to New GM.

Pursuant to 28 U.S.C. § 1745, I declare under penalty of perjury that the foregoing
statements are true and correct.

1 MR. FISHER: I am going to ask
2 the court reporter to please mark as
3 AAT-Feldman Exhibit 1 a document that
4 is titled "Exhibit 1, DIP Credit
5 Facility." And it bears a docket
6 number 2529-1.

7 MR. JONES: I'm sorry. Eric,
8 before you ask a question, can I have
9 a quick consult with Mr. Feldman?

10 MR. FISHER: Sure.

11 MR. JONES: Can we go off the
12 record for one second?

13 THE VIDEOGRAPHER: We're going
14 off the record at 5:32 p.m.

15 ---

16 (Recess from 5:32 to 5:34.)

17 ---

18 THE VIDEOGRAPHER: We are back
19 on the record at 5:34 p.m.

20 MR. JONES: Thanks. If I may,
21 could I hear the last question posed
22 again? It was the one to which
23 Mr. Feldman answered that he believed
24 all such discussion were internal, and
25 I just want to hear the wording of

US Bankruptcy Court - New York
MLC v. JPMorgan Chase Bank

FINAL - CONFIDENTIAL
Matthew Feldman - Nov. 3, 2016

Page 160

1 that question.

2 MR. FISHER: Sure, I'm happy to
3 read it. I have the realtime here.

4 The question was:

5 "I'm not asking you to divulge
6 deliberative process privilege or
7 otherwise privileged information, but
8 to the extent that that view was
9 shared with others outside of that
10 circle, what was the government's view
11 about what would happen to GM in the
12 event that the 363 sale transaction
13 was not approved?"

14 A. I think I misheard the question
15 originally. I thought you were asking if
16 there was analysis that was shared, which was
17 not.

18 But I believe there's -- I
19 believe the -- not I believe -- the
20 government's view was that General Motors
21 would liquidate if the 363 process was not
22 successfully completed.

23 Q. And that view, do you know
24 whether it was set forth in any declarations
25 filed with the Court by government officials?

US Bankruptcy Court - New York
MLC v. JPMorgan Chase Bank

FINAL - CONFIDENTIAL
Matthew Feldman - Nov. 3, 2016

Page 161

1 A. I believe it was either set
2 forth in declarations or in deposition.

3 ---

4 (AAT-Feldman-1, Exhibit 1, DIP
5 Credit Facility (No Bates) was marked
6 for identification)

7 ---

8 BY MR. FISHER:

9 Q. I am going to hand you what has
10 been marked as AAT-Feldman Exhibit 1. And
11 just take a moment to at least have an
12 understanding of what this document is, and
13 the question is: Do you recognize this
14 document?

15 A. I do.

16 Q. And what is it?

17 A. I believe it's the
18 debtor-in-possession credit facility.

19 Q. And you were involved in the
20 negotiation of this document?

21 A. I was involved in the
22 negotiation of the debtor-in-possession
23 financing, some of whose terms are reflected
24 in this document.

25 Q. I want to turn your attention
